Herbert Furkert, Junkersdorf, near Cologne, and Rosina Schertz, Cologne-Lindenthal, Germany, assignors to Chemiebau Dr. A. Zieren G.m.b.H., Cologne-Braunsfeld, Germany, a corporation of Germany

No Drawing. Filed Aug. 28, 1962, Ser. No. 220,083
Claims priority, application Germany, Aug. 30, 1961, C 24,970/61
4 Claims. (Cl. 23—178)

3. A process for recovering of ammonia and sulfur in the form of sulfur dioxide from aqueous sulfuric acid solutions containing ammonium hydrogen sulfate and ammonium sulfate, comprising the steps of

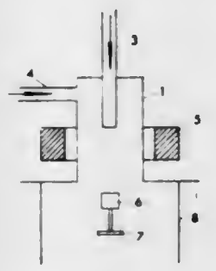
burning a gas selected from the group consisting of coke oven gas, generator gas and natural gas with air,

treating said gas emerging from said burning step by passage through red hot coke,

feeding said gas emerging from said burning step in an airtight reaction chamber, containing a material selected from the group consisting of coke and charcoal,

feeding said aqueous sulfuric acid solution into said reaction chamber,

maintaining said reaction chamber at a temperature range of between 370° C. and 400° C., and



withdrawing from said reaction chamber ammonia, sulfur dioxide, carbon dioxide and water vapor.

3,275,408

METHODS FOR THE PRODUCTION OF VITREOUS SILICA

John Alexander Winterburn, Tynemouth, North Shields, Northumberland, England, assignor to The Thermal Syndicate Limited, Wallsend, Northumberland, England, a British company

Filed Jan. 6, 1964, Ser. No. 335,848
Claims priority, application Great Britain, Jan. 29, 1963, 3,543/63
16 Claims. (Cl. 23—182)

1. A method of producing a transparent body of vitreous, hydrogen-free silica, comprising the steps of forming an oxygen-containing, hydrogen-free gas stream having distributed therethrough a substance selected from the group consisting of silicon and oxidizable, vaporizable, hydrogen-free silicon compounds, said gas stream being at a sufficiently high temperature to vaporize said substance and to oxidize the same under formation of silica and to maintain the thus-formed silica at at least its fusing temperature; directing the thus-formed silica-containing gas stream against a refractory support so as to impinge thereon and to deposit said silica on the same in the form of a body of fused, hydrogen-free, transparent, vitreous silica.

3,275,409

PROCESS FOR THE PRODUCTION OF MAGNESIUM OXIDE FROM MAGNESIUM CHLORIDE HYDRATE

Manfred Schubert, Dresden, and Fritz Murawsky, Sondershausen, Germany, assignors to Zentrale Forschungsstelle für Die Kali-Industrie Beim VEB Kaliwerk "Gluckauf" Sondershausen, Sondershausen, Germany

Filed Dec. 29, 1961, Ser. No. 163,281
3 Claims. (Cl. 23—201)

1. A process for producing magnesium oxide from a magnesium chloride hydrate-containing starting material which comprises a two-stage operation, the first stage comprising the steps of introducing said material into a shaft type chamber in atomized state at a pressure ranging from 5 to 15 atm., passing combustion gases into said chamber at the same end with the magnesium chloride hydrate-containing material at the approximate temperature of 400 to 800° C., said gases carrying said atomized particles lengthwise along said chamber and causing evaporation of excess liquid therefrom, separating said dried magnesium chloride hydrate from said gases, conveying the magnesium chloride hydrate into a decomposition chamber, introducing simultaneously therewith combustion gases at a temperature whereby decomposition occurs in a few seconds, and separating substantially pure magnesium oxide from the HCl-containing gases, the temperature of the leaving gases being about 900–950° C.

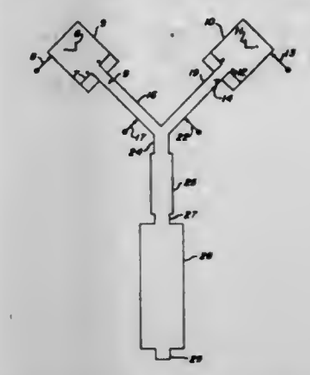
3,275,410

METHOD OF RECOVERY OF MAGNESIAN VALUES

Earl Leatham, Wexford, Pa., Albert H. Pack, Ludington, Mich., and Ernest P. Weaver, Pittsburgh, Pa., assignors to Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed May 22, 1963, Ser. No. 282,379
3 Claims. (Cl. 23—201)

1. Method of recovery of magnesian values from concentrated magnesium salt-containing aqueous solutions comprising, forming a slurry by mixing a measured amount of free lime containing material selected from the group consisting of slaked calcined limestone, slaked calcined dolomite, unslaked calcined limestone, and unslaked calcined dolomite, and an aqueous magnesium hydroxide containing suspension substantially free of magnesium ions, said aqueous suspension having over about 50 grams of magnesium hydroxide in suspension per liter calculated as MgO, mixing an additional quantity of said aqueous suspension with a concentrated magnesium ion containing solution, introducing the slurry and diluted magnesium ion containing solution into a reactor vessel having a common reaction zone, said zone being submerged in a body of still further aqueous suspension, the total quantity of aqueous suspension in addition to said magnesium ion containing solution being such that the total magnesium ion concentration calculated as magnesium chloride falls between about 0.1 and 1.0 gram per liter in said reaction zone, the amount of aqueous suspension mixed with said free lime containing material being such that the free lime containing material has a concentration falling between about 0.1 and 1.0 gram per liter calculated as CaO in said reaction zone, recirculating at least about 90% of the total volume of the aqueous suspension confining said reaction zone through said reaction zone each minute, withdrawing liquids and solids from said reaction vessel but only withdrawing a volume of said solids and liquids that is equal in volume to the free lime containing material and concentrated magnesium ion containing solution introduced into said reaction vessel.



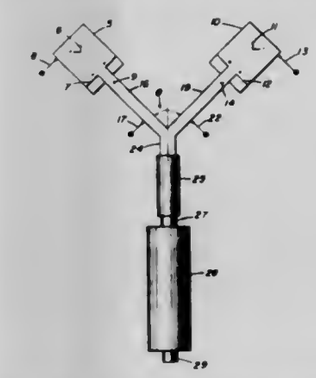
3,275,411

PLASMA PRODUCTION OF TITANIUM DIOXIDE

Mark Phillips Freeman, Darien, Conn., and Frederick Fussman, New York, N.Y., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine

Filed Apr. 8, 1963, Ser. No. 271,238
9 Claims. (Cl. 23—202)

1. A process which comprises heating an inert fluid in a flow-stabilized arc to a temperature of about 3,000° C. to 12,000° C. to form a plasma stream, combining therewith at least one of the reactants $TiCl_4$ and an oxygen-containing gas, mixing the reactants to form a heated reaction mixture of plasma, $TiCl_4$ and the oxygen-containing gas, passing the resultant reaction mixture into a reaction zone wherein the temperature is between about 800° C. and 3,000° C., maintaining the reaction mixture in said zone for a period of about 0.001 to one second to thereby produce particulate titanium dioxide in which the particles are spheroidal and in which a large proportion of the particles have an average particle size diameter of at least 0.13 micron.



3,275,412

PRODUCTION OF OXIDES BY PLASMA PROCESS

Joseph Francis Skrivan, Stamford, Conn., assignor to American Cyanamid Company, Stamford, Conn., a corporation of Maine

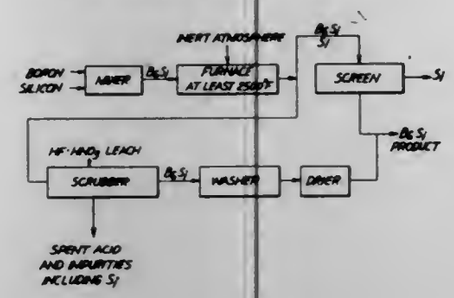
Filed Feb. 4, 1965, Ser. No. 430,262
8 Claims. (Cl. 23—202)

1. In the process of continuously preparing finely divided refractory oxides by contacting an oxygen-containing stream with at least one stream of at least one member selected from the group consisting of vaporous metal and metalloid salts, the improvement which comprises admixing at least one of said reactant streams with a stream of gaseous fluid heated by means of a plasma generator to a temperature in the range of 3,000°–12,000° C., contacting said reactant streams flowing at an angle with respect to each other of between about 50° and 160°, passing the resulting mixture of reactants to a reaction zone for a period of about .001 to 1 second, and then collecting the resultant oxide product.

3,275,413

PROCESS FOR PREPARING PYROSULFURYL FLUORIDE AND PYROSULFURYL CHLOROFLUORIDE

Richard F. Schwarer, West Haven, Santad Kongpricha, Hamden, and William C. Preusse, Orange, Conn., assignors to Olin Mathieson Chemical Corporation, New Haven, Conn., a corporation of Virginia



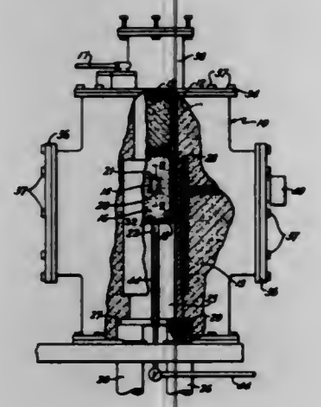
No Drawing. Filed Jan. 25, 1963, Ser. No. 253,998
4 Claims. (Cl. 23—203)

1. A process for preparing pyrosulfuryl fluoride and pyrosulfuryl chlorofluoride which comprises reacting cyanuric chloride with at least a stoichiometric amount of fluorosulfonic acid at a temperature range of about 120° C. to about 200° C. and distilling pyrosulfuryl fluoride and pyrosulfuryl chlorofluoride from the reaction mixture.

3,275,414
METHOD OF PREPARING HEXABORON SILICIDE (B_6Si)

Ervin Colton, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis.

Filed Dec. 30, 1959, Ser. No. 862,933
8 Claims. (Cl. 23—204)

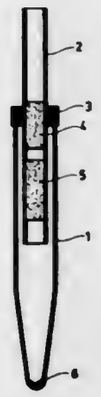


1. The method of making hexaboron silicide comprising: mixing elemental boron and silicon having a respective ratio of at least two to one, but below six to one and having a brownish hue; heating said charge in an inert atmosphere to a temperature of at least 2500° F. but below the fusion temperature of the charge; maintaining said charge at said temperature in said atmosphere until said brownish hue disappears therefrom; cooling said charge; and removing said molecular excess of silicon from said charge.

3,275,415
APPARATUS FOR AND PREPARATION OF SILICON CARBIDE SINGLE CRYSTALS

Hung Chi Chang, Pittsburgh, and Leonard J. Kroko, Pitcairn, Pa., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Feb. 27, 1964, Ser. No. 348,900
8 Claims. (Cl. 23—208)



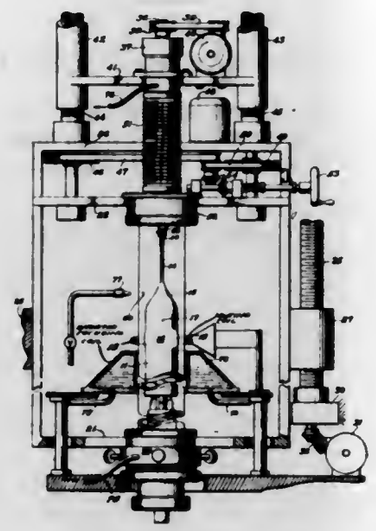
1. A furnace for growing single crystals of silicon carbide comprising a vessel, an empty hollow graphite cylinder with closed ends having porous walls disposed within said vessel, the vessel constructed to contain at least one material of the group consisting of silicon carbide and a mixture including silicon and carbon, the said material surrounding said graphite cylinder, silicon members disposed at preselected areas along the inside surface of the walls of said cylinder to form preferred nucleation sites for crystals of silicon carbide, and heating means disposed about said vessel to heat it and the contained material to a temperature sufficient to cause evolution of silicon carbide vapors, from the said material and passage thereof through the porous walls of the graphite cylinder wherein by the vapors of silicon carbide can concentrate at the selected areas of the graphite cylinder into the hollow thereof.

2. A method for producing silicon carbide single crystals which comprises rapidly heating to the sublimation temperature of silicon carbide a mass of a material selected from at least one of the group consisting of silicon carbide and a mixture of silicon and carbon, there being a brief temperature dwell at about 1400° C. when the silicon and carbon mixture is employed, continuing the heating until a temperature of about 1800° C. is reached and degassing the mass at such last temperature, thereafter heating the mass to a temperature of from about 2000° C. to about 2500° C. whereby vapors of silicon carbide are produced, the said material surrounding an empty hollow graphite cylinder that is pervious to silicon carbide vapor, diffusing said vapor into the hollow of said graphite cylinder, maintaining the inside wall surface of said cylinder at a temperature below the temperature in said heated mass, whereby a supersaturated vapor of silicon carbide is produced at said surface and a relatively small number of single crystals of silicon carbide are nucleated thereon, then reducing the temperature of said mass of silicon and carbon whereby the degree of supersaturation of the vapor diffused into said cavity at said surface is lowered below the nucleation pressure and said nucleated crystals grow, and recovering the resulting relatively large crystals.

3,275,416
PROCESS AND DEVICE FOR SEPARATING BARBITURIC ACID DERIVATIVES FROM BIOLOGICAL SAMPLES, AND FOR ANALYZING SAME

Stig G. B. Zaar and Bo G. Wallenius, Uppsala, and Endel Lausing, Karlstad, Sweden, assignors to Aktiebolaget Pharmica, a company of Sweden

Filed Dec. 10, 1962, Ser. No. 250,973
3 Claims. (Cl. 23—230)



2. A method for separating barbituric acid derivatives from constituents present in a sample of a biological liquid for analytical purposes comprising:

(a) placing the sample on a first porous carrier,
(b) thereafter contacting the porous carrier and deposited sample with chloroform which selectively dissolves the barbituric acid derivative from the sample,
(c) passing said chloroform solution of the barbituric acid derivative into contact with a second porous carrier,
(d) said second porous carrier containing a mercuric salt that reacts with the barbituric acid derivative and forms a complex therewith, and
(e) thereafter contacting said complex of mercury and barbituric acid derivative with dithizone.

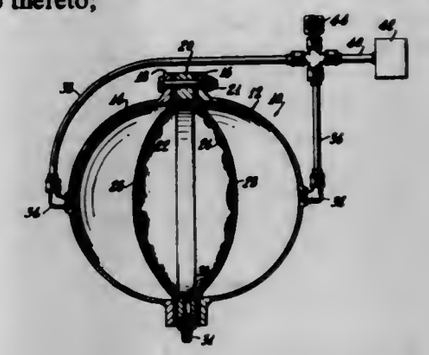
3,275,417
PRODUCTION OF DISLOCATION-FREE SILICON SINGLE CRYSTALS

Patrick H. Hunt, Richardson, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex., a corporation of Delaware

Filed Oct. 15, 1963, Ser. No. 316,347
4 Claims. (Cl. 23—273)

1. A system for crucible-free float zone forming of a rod of semiconductor material which comprises:

(a) means including a single-turn R.F. induction coil positioned in a horizontal plane,
(b) a hollow quartz tube extending through said coil,
(c) a conductive ring encircling said tube immediately below said coil and adapted for flow of liquid coolant therethrough as a body which is a truncated cone, the conical surface of which radiates outwardly from said R.F. induction coil,
(d) first supporting means for said rod at the bottom of said tube,
(e) second supporting means for a single crystal seed of semiconductor material in the upper end of said tube,
(f) means for rotating said second supporting means,
(g) means for moving said second supporting means relative to said first supporting means along the axis of said tube,
(h) means for moving said first supporting means relative to said coil, and
(i) means for flowing a predetermined gas through said tube.



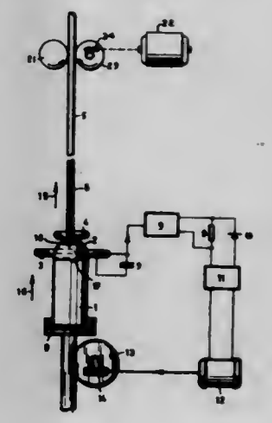
3,275,418
APPARATUS FOR CONTAINING A NON-RIGID OR FLUID MATERIAL

Thomas F. Nee, Oakdale, N.Y., assignor to Avien, Inc., Woodside, N.Y.

Filed Oct. 13, 1960, Ser. No. 62,363
2 Claims. (Cl. 23—281)

1. A variable volume storage device for storage of chemically unstable fluid material in the minimal volume condition at a preselected pressure, said device comprising:

a relatively narrow spacing ring provided with a port;
a pair of gas-porous flexible bladder members fastened at their peripheries to each side of said spacing ring in confronting relationship and adapted to retain fluid in a storage area defined by said bladders and said spacing ring;
a pair of gas-porous resilient backing members, each of said backing members rigidly retained proximate to said ring at their peripheries in close abutting relationship to one of said bladder members, respectively, on the outward face thereof, and biasing said bladder members towards said minimal volume condition, said backing members having the same cross sectional thickness for all volumetric conditions of the storage area defined by said bladders and said spacing ring;
a pair of symmetrically shaped rigid vessels, each of said vessels rigidly retained proximate to the periphery of one of said backing members in sealing relationship thereto;

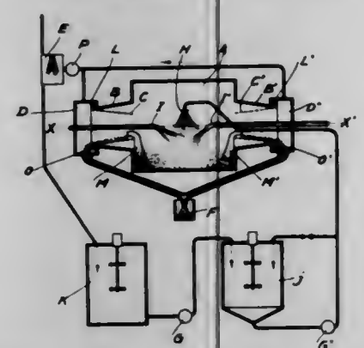


a pressure source provided with an outlet line;
a pair of fuel lines operatively connected to said outlet line;
each of said fuel lines operatively connected to one of said rigid vessels respectively, and adapted to provide equal pressures to each of said rigid vessels; and
a discharge outlet disposed proximate to the juncture of said fluid pressure lines and said outlet line, whereby said gaseous decomposition products are adapted to pass through said bladder members and said backing members and to be withdrawn through said discharge outlet.

3,275,419
METHOD AND APPARATUS FOR PRODUCING ELONGATED STRIP-SHAPED CRYSTALLINE SEMICONDUCTOR BODIES

Werner K. Spielmann, Munich, Germany, assignor to Siemens & Halske Aktiengesellschaft, Berlin, Germany, a corporation of Germany

Filed Mar. 9, 1962, Ser. No. 178,746
Claims priority, application Germany, Mar. 9, 1961, S 72,899
4 Claims. (Cl. 23—301)



1. The method of pulling an elongated dendritic crystal strip of semiconductor material out of a melt electrically heated by an inductance coil surrounding the melt,

which comprises supporting a rod of the semiconductor material in vertical position and leaving an end portion thereof exposed at the location of the heating coil, energizing the coil by electric current and maintaining thereby a molten zone above the melting temperature in a region adjacent to the still solid portion of the rod simultaneously supercooling to promote dendritic growth, a region of the molten zone farthest removed from the solid portion of the rod, immersing the end of a seed crystal of the same material into the supercooled region of the melt and thereafter pulling the seed with the growing crystalline product away from the molten zone at substantially the rate of crystalline growth, sensing the variations of the coil current due to changes in shape and volume of the molten zone occurring during crystal pulling, and advancing the rod in the pulling direction in dependence upon the departure of the sensed current variation from a given datum value to regulate the coil current for constancy, whereby the liquid-to-solid boundary of the rod and the supercooled region are maintained in a fixed relation to said coil location.

3,275,420
UNITARY ROTARY GRANULATOR AND METHOD FOR DRYING LIQUIFORM SUBSTANCES

Georges Tchouriline-Kissileff, Lille (Nord), France, assignor to Etablissements Kuhlmann, Paris, France, a corporation of France

Filed Dec. 12, 1962, Ser. No. 244,152
Claims priority, application France, Dec. 13, 1961, 881,800
6 Claims. (Cl. 23—313)

1. A method of forming spherical porous granules from particles of matter associated with a liquid in the form of a slurry or solution comprising atomizing the said slurry or solution at the center of an oven toward a bed of granules being formed, heating the atomized slurry or solution as it comes into contact with the said bed of granules whereby the liquid is evaporated and solid particles are formed and coalesce, rotating said oven whereby spherical granules are formed from said coalesced particles and the spherical granules move laterally away from the center of the oven toward the ends thereof as they grow larger and removing the spherical, porous granules at the said ends of the oven.

3,275,421
RECOVERY OF ACTINIDES FROM HALITE DEBRIS

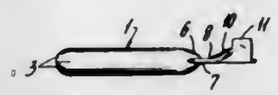
David G. Karraker and William C. Perkins, Aiken, S.C., assignors to the United States of America as represented by the United States Atomic Energy Commission

No Drawing. Filed Apr. 16, 1965, Ser. No. 448,900
8 Claims. (Cl. 23—319)

8. A process for the recovery of actinide values from a relatively large quantity of halite debris containing a small amount of actinide values resulting from a nuclear detonation in a halite stratum which comprises reducing said halite debris to a relatively finely divided state, contacting said finely divided debris with a sufficient quantity of water to dissolve substantially all of said halite and to provide an insoluble residue containing said actinide values together with insoluble sulfates, silicates, and other impurities, treating said residue with an aqueous solution of ammonium carbonate in sufficient quantity to metathesize said insoluble sulfates, contacting the metathesized residue with boiling nitric acid to dissolve said residue, and thereafter separating said actinide values from said solution.

3,275,422
CONTINUOUS-GAS-PHASE VOLATILITY PROCESS

George I. Cathers, Knoxville, and James C. Mailen, Oak Ridge, Tenn., assignors to the United States of America as represented by the United States Atomic Energy Commission



No Drawing. Filed Aug. 14, 1964, Ser. No. 390,278
11 Claims. (Cl. 23—325)

6. An improved method for recovering uranium and plutonium values from a fused salt mixture containing same wherein said salt mixture is heated to a molten state, dispersed into salt droplets, an contacted with fluorine gas to convert said uranium and plutonium values to the volatile hexafluoride state and thereby volatilize same comprising the steps of countercurrently contacting said droplets with gaseous fluorine at a temperature at least as great as the liquidus temperature of said salt mixture to thereby convert said fuel values to the volatile hexafluoride state and thereafter recovering said volatilized hexafluoride product.

3,275,423
GROUNDING PIN

Ferdinand Klumpp, Jr., Union, N.J., assignor to Heyman Manufacturing Company, Kenilworth, N.J., a corporation of New Jersey

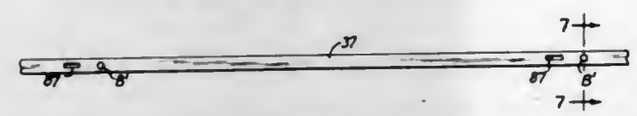
Filed Dec. 27, 1963, Ser. No. 333,946
9 Claims. (Cl. 29—183)

4. A round hollow electrical contact pin comprising a closed end portion, a portion of said pin away from said end portion enclosing the hollow of said pin including a pair of folded metal shoulders forming a line, a back portion extending beyond said line, and said back portion including means adapted to be crimped to wire.

3,275,424
CLAD POROUS METAL ARTICLES

Henry A. Kuchek, Auburn, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

Original application Oct. 9, 1961, Ser. No. 143,621, now Patent No. 3,138,856, dated June 30, 1964. Divided and this application Nov. 8, 1963, Ser. No. 322,441
4 Claims. (Cl. 29—183.5)



1. An article of unitary construction comprising a porous metal core disposed within a non-porous metal sleeve, said sleeve and said core being bonded together, the pores of said core being interconnected, and said sleeve and said core each being formed of an extrudable metal.

3,275,425
CONTACT MEMBER STOCK COMPRISING A STRIP OF ELECTRICALLY CONDUCTIVE METAL AND BONDED THERETO A SEQUENCE OF SPACED MALLEABLE METAL BALLS ADAPTED TO BE FLATTENED

Arthur James Thomson, Oakland, R.I., and Gerard R. Achin, North Attleboro, and Frank Rynhart, Taunton, Mass., assignors to Texas Instruments Incorporated, Dallas, Tex., a corporation of Delaware

Original application Sept. 1, 1961, Ser. No. 135,636, now Patent No. 3,194,940, dated July 13, 1965. Divided and this application Jan. 15, 1964, Ser. No. 337,949
10 Claims. (Cl. 29—183.5)

1. The elongate intermediate electrical product for making electrical terminal contact elements by division therefrom, comprising a strip of substantially electrically conductive metal stock, and a sequence of spaced malleable metal balls which are both substantially spherical and electrically conductive, said balls being substantially tangentially electrically welded to the strip.

3,275,426
WEAR RESISTANT COATING COMPOSITION ON A VALVE FOR INTERNAL COMBUSTION ENGINE

Edward P. Rowady, Battle Creek, Mich., assignor to Eaton Yale & Towne Inc., a corporation of Ohio

No Drawing. Original application Apr. 17, 1963, Ser. No. 273,551. Divided and this application Mar. 22, 1965, Ser. No. 459,489
3 Claims. (Cl. 29—183.5)

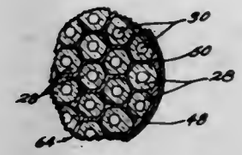
1. An article of manufacture comprising a valve for an internal combustion engine, said valve having an integral coating on the tip portion thereof having a composition consisting essentially of, in weight percent, of 0.5–0.7 carbon, 0.2–0.6 manganese, 7–10 chromium, 2.7–3.5 silicon, 1–4 boron, 0.4 maximum nickel, 0.15 maximum aluminum, 0.03 maximum phosphorous and 0.03 maximum sulfur, balance substantially iron.

3,275,427
MIDDLE DISTILLATE FUEL COMPOSITION

Darrell W. Brownawell, Scotch Plains, and William C. Hollyday, Jr., Plainfield, N.J., assignors to Esso Research and Engineering Company, a corporation of Delaware

No Drawing. Filed Dec. 17, 1963, Ser. No. 331,113
10 Claims. (Cl. 44—62)

1. A middle distillate fuel boiling in the range of from 300 to 750° F. containing a minor amount sufficient to lower the pour point of said fuel of a copolymer of ethylene and a vinyl fatty acid ester having from about 3 to 5 carbon atoms in the ester, said copolymer being further characterized by containing from 15 to 25% of said vinyl fatty acid ester; and a minor amount sufficient to enhance the filterability of said fuel of a polymer of a lauryl acrylic acid ester having a molecular weight of from 760 to 10,000.



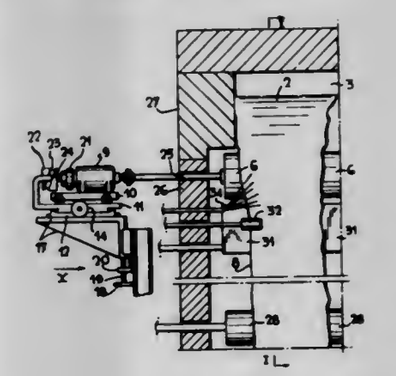
3,275,428
METHOD OF MAKING HONEYCOMB STRUCTURE

Walter P. Siegmund, Woodstock, Conn., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts

Filed May 21, 1963, Ser. No. 281,884
8 Claims. (Cl. 65—4)

1. The method of making a honeycomb structure comprising the steps of:

arranging a multiplicity of tubules, each having an inner layer of a first glass material defining a central opening through the tubule and an outer cladding layer of a second fusible glass material, in side-by-side contacting relation to each other to form a bundle,



fusing said tubule claddings together to form a multitubular structure,

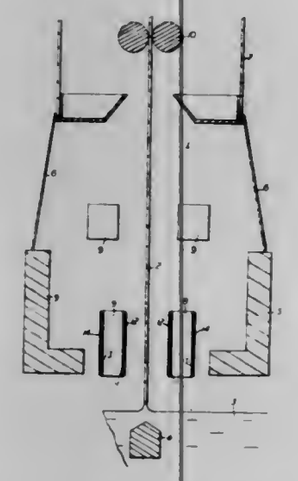
and removing said inner layers of glass to form a honeycomb embodying only said second glass.

3,275,429
GLASS PROCESSING APPARATUS INCLUDING A RECIPROCATING ROLLER

Gustave Javaux, 6 Rue Simonis, Saint-Gilles, Brussels, Belgium

Filed Sept. 29, 1965, Ser. No. 491,157
1 Claim. (Cl. 65—185)

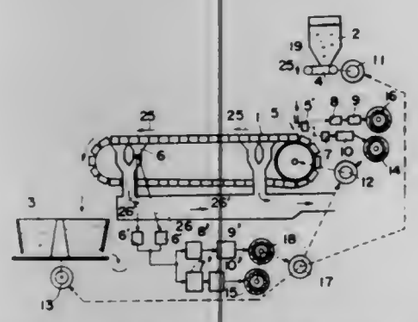
Apparatus for down-drawing a sheet of glass comprising a source of molten glass, means defining a path of downward flow of the molten glass from said source, a horizontal rotating roller disposed under said means to receive the downward flow at the upper portion of said rotating roller, said roller being disposed relative to the said source so that the molten glass adheres to said roller upon contact therewith and forms a downwardly depending and tapering bulb thereon, means for rotating said roller at a speed such that some of the molten glass from the bulb is drawn upwardly by the rotating roller from the bulb to make a complete cycle with the roller and such that the local amounts of glass withdrawn from the bulb are proportional to the local size of the bulb therefore tending to even the bulb, means for axially reciprocating said rotating roller, and means for drawing downwards a sheet of glass from said bulb formed on the lower part of the roller.



3,275,430
RADIANT TYPE COOLER IN APPARATUS FOR PRODUCING GLASS IN RIBBON FORM

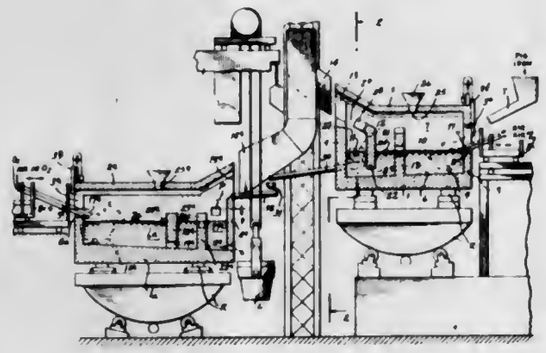
John Reginald Beattie, Maghull, near Liverpool, England, assignor to Pilkington Brothers Limited, Lancashire, England, a corporation of Great Britain

Filed Mar. 29, 1963, Ser. No. 268,875
Claims priority, application Great Britain, Mar. 30, 1962, 12,413/62
5 Claims. (Cl. 65—204)



1. In an apparatus for producing flat glass in ribbon form in which the glass as it is produced from molten glass is advanced lengthwise as a ribbon along a cooling

path, a cooler disposed opposite said path in position to cool the advancing glass ribbon comprising a metal box through which a cooling medium may be circulated having an obverse metal face turned toward said path so as to face a face of the advancing ribbon, said cooler face having on at least a substantial part thereof a sintered particulate covering of refractory material selected from the group consisting of chromium sequi-oxide (Cr_2O_3)

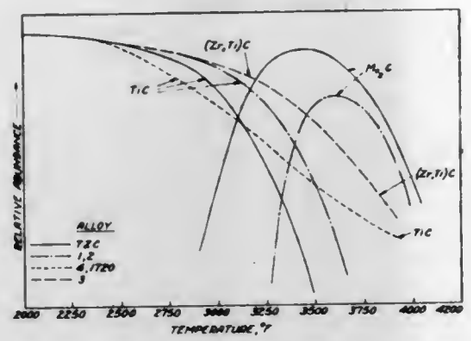


and silicon carbide (SiC) and having greater heat absorptivity than that of the metal of said cooler face over a range of radiation wavelength of 1 micron up to 10 microns, said covering having a thickness of about four to five thousandths of an inch, said particulate covering being uniformly applied over said part of said cooler face, and having the property of absorbing radiation emitted by the glass ribbon in a substantially uniform manner over said part of the cooler face.

3,275,431
SINTERING APPARATUS WITH AUTOMATIC CONTROL
Yasuhiro Sawada, Kitakyushu, Japan, assignor to Yawata Iron & Steel Co., Ltd., Tokyo, Japan
Filed July 9, 1963, Ser. No. 293,737
10 Claims. (Cl. 75—5)

3. A method of controlling the operation of apparatus in which detectable variable conditions indicate the correctness of the operation of the apparatus, and the operation of the apparatus is accomplished by manipulated inputs to the apparatus, said method comprising detecting at least one of the variable conditions, and when said variable condition varies from a desired optimum, applying to at least one of the manipulated inputs to the apparatus at least one rectangular wave type control pulse to cause the value of the manipulated input to vary in the shape of a rectangular wave, continuing to apply rectangular wave type control pulses until the detected variable condition returns to the desired optimum and when the detected variable condition has deviated from the desired optimum for a predetermined length of time, applying to said manipulated input a step type of control to cause the value of the manipulated input to change without returning to its value previous to the step type of control.

3,275,432
OXYGEN STEEL MAKING
George Alexandrovsky, 10 Bradley St., Yonkers, N.Y.
Filed Feb. 23, 1965, Ser. No. 439,497
10 Claims. (Cl. 75—60)

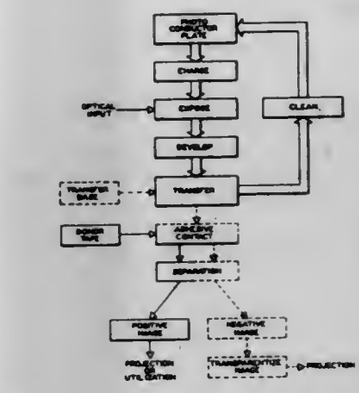


1. An oxygen steel making two-step process including forming molten pig iron into a first elongated pool, feeding additional molten pig iron to and from the opposite ends of said first pool while blowing air into said first pool under conditions burning mainly only the silicon from said iron without adding substantial amounts of nitrogen to the iron feeding from said first pool, forming the molten pig iron from said first pool into a second elongated pool in at least one non-rotary container, forming a refining slag on the top of said second pool, and introducing substantially pure oxygen at an angle smaller than 90° into the space above said second pool while causing relative motion between the pool and the location where the oxygen is introduced, to cause carbon monoxide to form at varying locations in the pool and rise through said slag.

3,275,433
STEEL TREATING AGENT CONSISTING OF Ba-Ca-Al-Fe-Mn-Si
Donald C. Hilty, Sanborn, and Walter Crafts, Niagara Falls, N.Y., and Stuart Solomon, Summit, N.J., assignors to Union Carbide Corporation, a corporation of New York
Filed Dec. 2, 1963, Ser. No. 327,378
7 Claims. (Cl. 75—134)

1. An aluminum-containing alloy addition agent consisting essentially of about 7% to 21% barium; about 10% to about 21% calcium, the aggregate of barium and calcium being from about 17% to about 40%; about 8% to about 35% aluminum, up to 25% in the aggregate of iron and manganese, balance silicon.

3,275,434
MOLYBDENUM-BASE ALLOY
Winston H. Chang, Cincinnati, Ohio, assignor to General Electric Company, a corporation of New York
Filed Apr. 13, 1964, Ser. No. 359,080
5 Claims. (Cl. 75—176)



1. An improved molybdenum-base alloy consisting essentially of about, by weight, 1.25–2% titanium, 0.4–0.7% zirconium, 0.05–0.2% carbon, the atomic ratio of titanium plus zirconium to carbon being from about 2:1 to about 6:1, with the balance molybdenum.

3,275,435
METHOD OF PRODUCTION OF A DISPENSER CATHODE
Robert H. Bristow, Burnt Hills, and John H. Affleck III, Schenectady, N.Y., assignors to General Electric Company, a corporation of New York
Filed Nov. 1, 1963, Ser. No. 320,725
7 Claims. (Cl. 75—201)

1. A method of producing a dispenser cathode which comprises in combination
(a) providing a refractory metal in particulate form,
(b) adding a material to said refractory metal to coat said refractory metal with an additive metal which is in the range of about 0.3 to 1.0 weight percent of said refractory metal, and not substantially more than will alloy with said refractory metal,
(c) said additive metal including a metal taken from the class consisting of those metals of Group VIII of the Periodic Table of Elements,
(d) adding at least about 8.0 weight percent of a barium compound to said refractory metal,
(e) adding less than about 1.0 weight percent of $CaCO_3$ to said refractory metal,
(f) compressing said mixture at about 10 tons per square inch pressure and
(g) firing said mixture in a reducing atmosphere at about 1300° C. to provide a sintered integral high strength dispenser cathode.

3,275,436
METHOD OF IMAGE REPRODUCTION UTILIZING A UNIFORM RELEASABLE SURFACE FILM
Edward F. Mayer, Novelty, Ohio, assignor to Xerox Corporation, Rochester, N.Y., a corporation of New York
Filed July 24, 1962, Ser. No. 212,083
16 Claims. (Cl. 96—1)

13. The process of forming image reproductions comprising in sequence the steps of:
(a) xerographically forming a resist transferable image of an original on a support surface;
(b) applying an adhesive surface of a first support base against the image on said support surface;
(c) removing said first support base from said last recited relation with the image adhering and transferred thereto;
(d) presenting said first support base supporting the resist image with the adhesive surface into contact against a second support base containing a uniform releasable opaque surface layer separable selectively by area subjected to adhesive attraction; and,
(e) separating said support bases from each other whereby said opaque layer from said second support

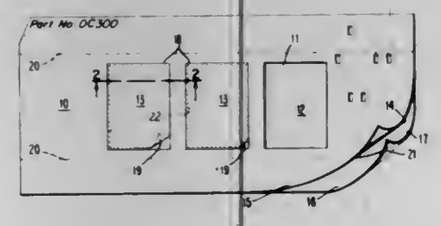
base adhesively adheres and is transferred to said first support base in the surface areas devoid of the resist image thereon.

3,275,437
IMAGE TRANSFER PROCESS AND ELEMENTS THEREFOR
Abraham Bernard Cohen, Springfield, N.J., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
No Drawing. Filed Jan. 24, 1963, Ser. No. 253,759
20 Claims. (Cl. 96—29)

1. A dry process for image transfer which comprises
A. placing into interfacial contact the surfaces of an image-receptive element and an addition polymerizable solid layer consisting of
(1) underexposed areas in said solid layer comprising
(x) at least one non-gaseous ethlenically unsaturated compound containing at least one terminal ethylenic group, having a boiling point above 100° C. at normal atmospheric pressure and being capable of forming a high polymer by photoinitiated addition polymerization, and
(y) a diffusible colorant that diffuses at a temperature below that at which said layer becomes tacky and adherent to bond paper; and
(2) complementary adjoining coplanar exposed image areas comprising an addition polymer of the aforesaid compound and said colorant, and
B. heating at least one of the elements while they are in surface contact to a temperature sufficient for the colorant to diffuse through the underexposed areas of the layer but below that at which the layer becomes tacky and adherent to said image-receptive element whereby the colorant in the underexposed image areas diffuses and transfers to said element.

3,275,438
PREPARATION OF MAGNETIC RECORDS INCLUDING THE USE OF PHOTOGRAPHIC TECHNIQUES
Simon Levin, 123 W. 44th St., New York, N.Y.
No Drawing. Continuation of application Ser. No. 186,851, Apr. 12, 1962. Division of application Ser. No. 833,999, Aug. 17, 1959. This application Feb. 16, 1965, Ser. No. 433,195
10 Claims. (Cl. 96—35)

4. The method of producing a magnetic record which comprises providing at least one salt of a metal selected from the group consisting of the ferromagnetic elements



in suspension in a radiant energy sensitive polymeric carrier medium, differentially exposing said carrier to rays of radiant energy representing information to be stored in said carrier, removing the unexposed areas of said carrier whereby a raised pattern of said information is formed in said carrier and reducing said salt remaining in said raised pattern to a magnetizable state.

3,275,439

METHOD OF UPDATING A RECORD MEMBER

Alvin H. Battison, Vestal, and Herman C. Scheer, Endicott, N.Y., assignors to International Business Machines Corporation, New York, N.Y., a corporation of New York

Filed July 2, 1962, Ser. No. 206,757
2 Claims. (Cl. 96—41)

1. The method of updating a record member, composed of an opaque card having a plurality of removable portions laminated to a transparent, photographic film having unexposed silver halide emulsion thereon and coated on the nonlaminated surfaces with an opaque removable material, comprising the steps of:

removing a first one of said card portions and the opaque material aligned therewith;

exposing said unexposed film under said removed portion and material to record data thereon;

developing said exposed film to produce a transparent photographic negative of said data; and

repeating said removing, exposing, and developing steps in the stated sequence for the unexposed film at the second of said portions when said recorded data is to be subsequently modified.

3,275,440

PROCESS FOR DEVELOPING PHOTOSENSITIZED ANODIZED ALUMINUM PLATES

Robert A. Kempe, Hudson, and Kazimierz R. Szczepaniak, Cleveland, Ohio, assignors to Metalphoto Corporation, Cleveland, Ohio

No Drawing. Filed Aug. 12, 1963, Ser. No. 301,606
4 Claims. (Cl. 96—66)

1. In the manufacture of an aluminum photographic plate in a method which includes anodizing the surface of a clean aluminum plate to provide a porous, durable and transparent layer of aluminum oxide thereon, and thereafter impregnating said porous oxide layer with a photosensitive composition and then imagewise exposing the resulting photosensitive article, the improvement which comprises developing a visible image on the exposed photosensitized plate by immersing the same in a developer solution having a composition consisting essentially of:

Metol	grams	2–6.5
Sodium sulfite, desiccated	do	40–65
Hydroquinone	do	6–7
Alkali metal carbonate, monohydrate	do	30–40
Lower alcohol, up to	ml	150
Anionic wetting agent	ml	0.3–0.5
Fog inhibitor	ml	3.0–8.0

and sufficient water to make 1 liter of solution and after removing the plate from the developer, fixing the image.

3,275,441

PRINTING PLATE AND METHOD OF MAKING SAME

Bernard Cohn, Elmsford, N.Y., assignor to Technilith Inc., Mount Vernon, N.Y., a corporation of New York

Filed Mar. 7, 1963, Ser. No. 263,479
8 Claims. (Cl. 96—75)

8. A presensitized lithographic printing plate comprising an aluminum substrate having a surface initially treated with an acidic molybdate solution and thereafter with an aqueous reducing agent selected from the group consisting of thiosulfate and ferrous salts, and a layer of a photosensitive polymeric diazo compound overlying said surface, said compound being a condensation polymer of diazodiphenylaminesulfate and paraformaldehyde.

3,275,442

METHOD OF IRREVERSIBLY DARKENING A BIS (p-AMINOPHENYL) VINYL CARBONIUM POLYMETHINE LEUCO DYE

Hans Kosenkranius, Cincinnati, Ohio, assignor to Polacoat Incorporated, Blue Ash, Ohio

No Drawing. Filed Nov. 14, 1961, Ser. No. 152,150
3 Claims. (Cl. 96—90)

1. The method of irreversibly increasing the optical density of a pellucid photosensitive composition consistessentially of a normally phototropic bis(p-aminophenyl) vinyl carbonium polymethine dye in its leuco form, a halogen-containing substance generating halogen-free radicals on exposure to actinic radiation of a wavelength less than about 500 millimicrons, and a polar hydroxylic solvent for said dye and halogen-containing substance, which process comprises exposing said photosensitive composition to actinic radiation.

3,275,443

ANTI-FOGGING AGENTS FOR AN N-VINYL, ORGANIC HALOGEN, DYE FORMER SYSTEM

Eugene Wainer, Shaker Heights, Ohio, assignor to Horizons Incorporated, Cleveland, Ohio, a corporation of New Jersey

No Drawing. Filed Aug. 14, 1963, Ser. No. 301,950
10 Claims. (Cl. 96—90)

1. A normally colorless light-sensitive composition consisting essentially of at least one of each of the following constituents:

(1) An N-vinyl compound

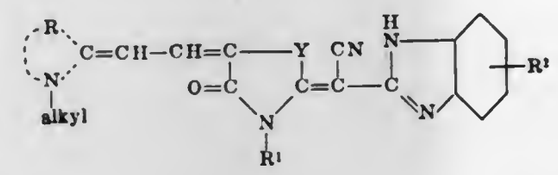
(2) An organic halogen compound which decomposes to yield free radicals when subjected to a suitable dose of radiant energy

and

(3) An anti-fogging agent selected from the group represented by a formula selected from the group consisting of

$$R_xM,\ R_xMR'_z \text{ and } R_yMMR'_z$$

wherein R represents a radical selected from the group consisting of aryl and alkaryl, and R′ represents a radical selected from the group consisting of alkyl, aryl, alkaryl and aralkyl and R and R′ may each represent more than one kind of radical in any one compound, and wherein M represents an element selected from the group consisting of Ge, Sn, Pb, P, As, Sb and Bi and wherein x, y and z are integers from 1 to 4 such that the total number of R and R′ satisfies the valence of M.



3,275,444

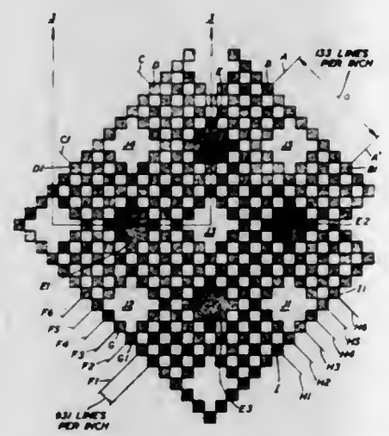
PHOTOGRAPHIC SENSITIZING DYES AND EMULSIONS

Friedrich Bauriedel, Dreieichenhain, Werner Franke, Wiesbaden, and Hilde Lang, Neu Isenburg, Germany, assignors to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Dec. 10, 1964, Ser. No. 417,510
Claims priority, application Germany, July 2, 1964, A 46,481
5 Claims. (Cl. 96—105)

1. A photographic silver halide emulsion containing sensitizing amounts of a ternuclear dye of the formula

wherein R constitutes the atoms necessary to complete with the intracyclic N and C atoms a cyclic nucleus selected from the group consisting of benzothiazole, benzoselenazole, benzimidazole and thiazoline nuclei, R^1 is a member selected from the group consisting of alkyl and carboxylalkyl, R^2 is a member selected from the group consisting of H, alkyl, chlorine, bromine and alkoxy, and Y is a member selected from the group consisting of —S— and



3,275,445

PHOTOGRAPHIC HALF-TONE CONTACT SCREENS

Herbert Middlemiss, Nottingham, England, assignor of one-half to W. H. Howson Limited

Filed July 15, 1963, Ser. No. 295,101
Claims priority, application Great Britain, July 17, 1962, 27,340/62
14 Claims. (Cl. 96—116)

1. A photographic half-tone contact screen comprising a member having a pattern of linearly arranged spaced first dots each of a predetermined area, each first dot being in the form of a central core having a midpoint of maximum density which is surrounded by a pattern of minor dots each of a smaller area than said predetermined area, said minor dots lessening in density with displacement from the central core, and the minor dots being spaced apart in a regular pattern to provide areas of minimum density between themselves.

3,275,446

EATING-INDUCING COMPOSITIONS FOR SILKWORMS

Yasuji Hamamura, Keizo Hayashiya, and Kenichi Naito, Kyoto, Japan, assignors, by direct and mesne assignments, of one-half to Yasuji Hamamura, Kyoto, Japan, and one-half to Takeda Chemical Industries Ltd., Osaka, Japan, a corporation of Japan

No Drawing. Filed Nov. 8, 1963, Ser. No. 322,497
Claims priority, application Japan, Mar. 6, 1961, 36/7,616, 36/7,617, 36/7,618; Sept. 22, 1961, 36/34,349; Oct. 20, 1961, 36/37,901; Dec. 1, 1961, 36/46,972
11 Claims. (Cl. 99—2)

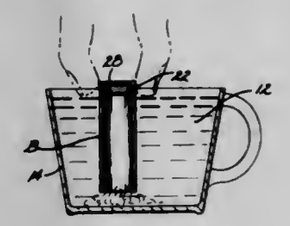
1. A composition for inducing silkworms to eat comprising β-sitosterol, cellulose powder, a sugar, an inorganic phosphate and a flavonoid.

3,275,447

PROCESS FOR THE PREPARATION OF HIGHLY CONCENTRATED DRY HOPS BY FREEZING

Adam Müller, Coburg, Germany, assignor to Dr. A. Muller Chemisches Laboratorium, Coburg, Germany, a corporation of Germany

No Drawing. Filed Aug. 2, 1963, Ser. No. 299,488
Claims priority, application Germany, Aug. 8, 1962, C 27,665
13 Claims. (Cl. 99—50.5)



1. A process for the preparation of a hops concentrate containing substantially all the lupulin in the hops comprising freezing the hops to a temperature of at least −10° C. wherein the lupulin forms distinct particles, comminuting the frozen hops with eddy streams of inert gas to a particle size of 200 to 6000 microns whereby the lupulin particles are freed from the hops, separating the comminuted hops into a coarse fraction containing no lupulin and a fine fraction containing substantially all the lupulin in the hops and recovering the fine fraction as the hops concentrate.

3,275,448

COMESTIBLES CONTAINER WITH WATER SOLUBLE PRODUCT THEREIN

Gerhart R. Sommer, Los Angeles, Calif., assignor of one-half to Marshall H. Sevin, Beverly Hills, Calif.

Filed Aug. 26, 1963, Ser. No. 304,481
3 Claims. (Cl. 99—77.1)

1. A container for water-soluble comestibles comprising:

a hollow non-water soluble body having an open lower end, said body receiving said comestible;

a first comestible disposed within said body between the lower end thereof and the intermediate portion thereof;

a second comestible disposed within said body above said first comestible;

a water-soluble element interposed between said first and second comestibles to normally retain said second comestible in place within said body;

and a water-soluble cover on the lower end of said body to normally retain said comestibles within said body,

said cover dissolving when the lower end of said body is placed in water whereafter the upper portion of said body may be grasped and said body may be used as a stirring means.

3,275,449
METHOD OF AGGLOMERATING SOLID PARTICULATE MATERIAL

Edward L. Fritzberg, Minneapolis, Minn., assignor to The Pillsbury Company, Minneapolis, Minn., a corporation of Delaware

No Drawing. Filed June 26, 1962, Ser. No. 205,224
21 Claims. (Cl. 99—80)

1. A method of agglomerating comprising forming a mixture of solid particulate material to be agglomerated and frozen particulated liquid in an amount capable of bringing the final moisture content to between about 5 and 50% by weight of the mixture, and melting the frozen particles in the mixture and converting same to liquid form whereby the liquid forms adhesive surfaces on the solid particles and the adhesive particles are bonded together in the form of agglomerates.

3,275,450
D-GALACTONO-GAMMA LACTONE CONTAINING PREMIX FOR LEAVENED BAKED FOOD PRODUCTS

Arthur G. Holstein, 1219 Glen Rock Ave., Lake Bluff, Ill.

Filed Jan. 2, 1964, Ser. No. 335,056
5 Claims. (Cl. 99—94)

1. A premix with multiple leavening action for use in the preparation of a leavened baked food product from the group consisting of angel food cake, pizza crust, delayed angel food cake and delayed pizza pie crust, said premix comprising:

a compound effective to produce carbon dioxide when acidulated;

at least one rapid acting acidulant effective to react promptly with a minor proportion of said compound when the same are mixed in an aqueous mixture at room temperature and being in amount from about 1 to about 2 parts by weight of the total premix;

and a quantity of D-galactono-gamma-lactone sufficient to react in leavening action with substantially the remainder of said compound during baking to provide a baking-activated leavening action said lactone being in amount from about 3 to about 5 parts by weight of the total premix.

3,275,451
ALPHA - GLUCOHEPTONO - GAMMA - LACTONE CONTAINING PREMIX FOR LEAVENED BAKED FOOD PRODUCTS

Arthur G. Holstein, 1219 Glen Rock Ave., Lake Bluff, Ill.

Filed Jan. 2, 1964, Ser. No. 335,057
5 Claims. (Cl. 99—94)

1. A premix with multiple leavening action for use in the preparation of a leavened baked food product from the group consisting of angel food cake, pizza crust, delayed angel food cake and delayed pizza pie crust, said premix comprising:

a compound effective to produce carbon dioxide when acidulated;

at least one rapid acting acidulant effective to react promptly with a minor proportion of said compound when the same are mixed in an aqueous mixture at normal mixing temperature and being in amount from about 1 to about 2 parts by weight of the total premix;

and a quantity of alpha-glucoheptono-gamma-lactone sufficient to react in leavening action with substantially the remainder of said compound during baking to provide a baking-activated leavening action, said lactone being in amount of about 3 to about 5 parts by weight of the total premix.

3,275,452
PREPARATION OF MEAT PRODUCTS

William M. Allen, Columbus, Ohio, assignor, by mesne assignments, to Hoover Ball and Bearing Company, Saline, Mich., a corporation of Michigan

No Drawing. Filed Apr. 17, 1963, Ser. No. 273,574
9 Claims. (Cl. 99—109)

1. In a process for the manufacture of comminuted meat products, comprising a comminuted meat mixture containing some liquid stuffed into a semipermeable membrane casing gathered together at spaced positions to divide said meat mixture into at least one discrete sausage form, the step of immersing said meat mixture in a non-toxic cooking liquid containing solutes of a greater molecular concentration than the liquid in said membrane at a temperature and for a period of time sufficient to coagulate said meat mixture.

3,275,453
MILK-CURDLING ENZYME ELABORATED BY *ENDOTHIA PARASITICA*

Joseph L. Sardinas, Gales Ferry, Conn., assignor to Chas. Pfizer & Co., Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Apr. 21, 1964, Ser. No. 361,532
3 Claims. (Cl. 99—116)

1. A mildly proteolytic, milk-curdling enzyme which in crystalline form is a polypeptide yielding on hydrolysis the amino acids cysteic, aspartic, threonine, serine, proline, glutamic, glycine, alanine, valine, isoleucine, leucine, phenylalanine, histidine, arginine, cystine and tyrosine, and which is further characterized (a) by being water soluble; (b) by being non-dialyzable; (c) by having its milk-clotting ability destroyed by heating to about 60° C. for five minutes; (d) by having maximum stability at a pH of about 4.5; (e) by being precipitable from an aqueous solution thereof by ammonium sulfate; (f) by having an ionic electric point of about 5.5; and (g) by migrating a distance of about 2.5 cm. toward the anode when subjected to horizontal electrophoresis in 0.025 M sodium acetate at pH 4.5 at a constant 250 volts and 8 milliamps for five hours.

3. In a process for making cheese including the step of preparing curds from milk, the improvement which comprises substituting for at least part of the rennin in said step the milk-clotting enzyme elaborated by a strain of *Endothia parasitica*.

3,275,454
METHOD OF PRESERVING COMESTIBLES

Alexander Winterberg, 16 Kfar Giladi St., Tel Aviv, Israel

No Drawing. Filed Aug. 17, 1961, Ser. No. 131,995
Claims priority, application Israel, Sept. 2, 1960, 14,335
7 Claims. (Cl. 99—171)

1. A method of preserving a comestible, comprising, applying to the comestible a liquid coating having adhesive properties and containing an antimycotic agent normally having a tendency to evaporate over a period of time, while said coating is still wet wrapping thereover a sheet of an impermeable material, and allowing said coating to dry so as to produce a wrapped comestible in which the coating containing the antimycotic agent adheres both to the comestible and to the impermeable sheet and fills the wrinkles and folds of the latter.

3,275,455
METHOD OF CLOTHING EDIBLE FRESHLY-SKINNED MEAT CARCASSES

Beverly E. Williams, La Grange Park, Ill., assignor to Hodges Research and Development Company, New York, N.Y., a corporation of California

No Drawing. Filed May 4, 1965, Ser. No. 453,182
9 Claims. (Cl. 99—174)

1. The improvement in the treatment of edible, freshly skinned meat carcasses which comprises covering the skinned surface of the carcass with a cloth at least a substantial portion of which comprises high-wet-modulus rayon fibers having on the average the following properties:

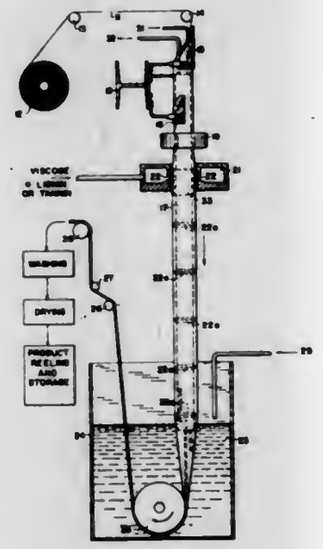
(a) a smooth, non-crenulated surface,

(b) a breaking tenacity, conditioned, between about 3.00 and about 6.00 g./den.,

(c) a breaking elongation, conditioned, between about 11 and about 20%,

(d) a modulus, conditioned, initial, between about 40 and about 70 g./den.,

(e) an average stiffness, conditioned, initial, between about 20 and about 40 g./den.,



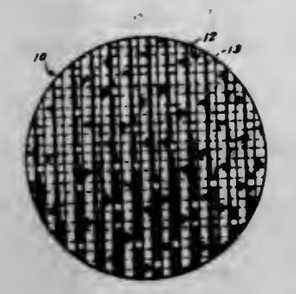
(f) a water swelling, cross-sectional, between about 35% and 65%, and

(g) a water retention, immersed and extracted, between about 60 and 100%, said cloth having a vapor transmission rate between about 35 and about 55 grams of moisture per 100 square inches per 24 hours from an atmosphere of 85 to 90% relative humidity at 99° F. to a dry atmosphere.

3,275,456
NATURAL GUT-COLORED FIBROUS MEAT CASING

Seymour Oppenheimer, Chicago, Ill., assignor to Tee-Pak, Inc., Chicago, Ill., a corporation of Illinois

Filed Jan. 27, 1964, Ser. No. 340,329
6 Claims. (Cl. 99—176)



1. A method of preparing a fibrous cellulosic meat casing having a color approximating that of a smoked natural gut casing which comprises forming a tube from a tissue paper of natural cellulosic fibers, preparing a colored viscose solution by addition to viscose of an alkaline solution containing lignin, tannin or soluble derivatives thereof in the proportion of 0.5–5.0 parts by weight per 100 parts cellulose in the viscose, impregnating the paper tube with said colored viscose, regenerating cellulose in the viscose impregnated tube, and washing and drying the product casing.

3,275,457
FROZEN FOOD PRODUCT AND PACKAGE

Alfred Vischer, Jr., 909 S. Cumberland Ave., Park Ridge, Ill.

Filed Apr. 17, 1962, Ser. No. 188,096
7 Claims. (Cl. 99—192)

2. An article of manufacture, comprising

a thin wafer or frozen liquid food,

a plurality of rectilinear grooves arranged in parallel, side-by-side relationship on at least one face of said wafer,

said wafer having a plurality of apertures extending from one face thereof to the other.

3,275,458
DEHYDRATED MASHED POTATO AND PROCESS FOR MAKING SAME

Miles J. Willard, Jr., Idaho Falls, Idaho, assignor to Rogers Brothers Company, Idaho Falls, Idaho, a corporation of Delaware

No Drawing. Continuation of application Ser. No. 120,482, June 29, 1961. This application Nov. 13, 1964, Ser. No. 411,087
23 Claims. (Cl. 99—207)

1. A process for making dehydrated mashed potatoes which comprises admixing dehydrated cooked mashed potato flakes with cooked mashed potato and a minor amount of a fatty acid monoglyceride distributing agent, said dehydrated flakes being employed in an amount sufficient to reduce the moisture content of the mixture to about 30 to 50%, permitting said mixture to rest with a minimum of agitation for at least about 20 minutes, remixing, and then drying said mixture.

23. A dehydrated, substantially granular, cooked mashed potato product, which can be readily reconstituted by the addition of liquid, comprising a mixture of the following components: (1) small potato flakes, (2) discrete potato cells, (3) clumps of potato cells, and (4) aggregates of potato cells attached to small flakes, said potato product having a minimum bulk density of about 28 lbs./cu. ft. to about 48 lbs./cu. ft. and a particle size of between approximately ¼" to about —80 mesh, said components of said dehydrated potato product each being present in an effective amount sufficient to enable the potato product to be reconstitutable with an aqueous liquid at all temperatures from cold to boiling.

3,275,459
METHOD OF MAKING MEAT CURING SALT COMPOSITIONS

Arthur E. Poarch, Mill Valley, Calif., and Michael W. Kossoy, Decatur, Ill., assignors to Western Dairy Products, Inc., San Francisco, Calif., a corporation of California

No Drawing. Filed Feb. 12, 1964, Ser. No. 344,234
6 Claims. (Cl. 99—222)

1. A method for making a curing salt composition for the curing of meat and meat products comprising fully dissolving in a predetermined amount of water an amount of salt selected from the group of salts consisting of the nitrite and nitrate salts of sodium and potassium, homo-

geneously mixing the resulting solution with substantially uniformly sized sodium chloride particles, said resulting solution being present in an amount sufficient to fully wet the sodium chloride but insufficient to fully dissolve said sodium chloride, thereby forming a homogeneous paste, raising the temperature of the mixture to its eutectic reaction isotherm, and cooling said mixture to a temperature below said eutectic reaction isotherm.

3,275,460
MOLD DRESSINGS FOR USE IN FOUNDRY PRACTICE

Jean Louis Jeanneret, Berea, Ohio, assignor to Foseco International Limited, Birmingham, England

No Drawing. Filed Nov. 23, 1964, Ser. No. 413,291
17 Claims. (Cl. 106—38.22)

5. A method of dressing a mold for metal casting which comprises applying to the inner surface of the mold a composition consisting essentially of a suspension of about 40 to 80% by weight of finely divided refractory material in an aqueous medium which includes, as a suspension agent, about 0.05 to about 1.5% by weight of a highly refined guar gum characterized by a Brookfield viscosity in a 1% by weight aqueous solution at 74° F. with a No. 4 spindle at 6 r.p.m. of about 22,500 centipoises and at 60 r.p.m. of about 4,800 centipoises.

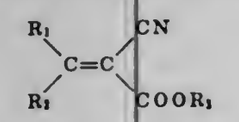
3,275,461
REFRACTORY

Ben Davies and Peter Harry Havranek, Pittsburgh, Pa., assignors to Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Filed Aug. 27, 1965, Ser. No. 483,356
15 Claims. (Cl. 106—58)

1. That method of obtaining high temperature strength in ceramically bonded magnesite refractories without sacrifice of hydration resistance, consisting essentially of fabricating a refractory-brickmaking size graded batch of dead burned dense magnesite particles, said magnesite particles characterized by including at least some of each of the constituents CaO, SiO_2, B_2O_3, the remainder being R_2O_3 materials, there being,

(a) up to about 1% SiO_2 and,
(b) up to about 3% CaO, by weight,
(c) the CaO:SiO_2 weight ratio being in the range 2:1 to less than 3:1,
(d) $(C+S)^2/100$ being the maximum B_2O_3 percentage content, wherein C is the weight percentage of CaO and S is the weight percentage of SiO_2,
(e) at least about 95 to 99%, by weight, of said particles being MgO plus CaO,



forming said batch into shapes, firing said shapes to obtain ceramically-bonded, dense, hydration resistant, magnesia refractory shapes.

3,275,462
CELLULOSE ACETATE TEXTILE TREATED WITH α-CYANO-β,β-DIALKYL ACRYLATE

Albert F. Strobel, Delmar, and Sigmund C. Catino, Castleton, N.Y., assignors to General Aniline & Film Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed Apr. 5, 1963, Ser. No. 270,802
19 Claims. (Cl. 106—196)

1. A method for improving the stability of cellulose acetate of an acetyl value of at least about 2.5 which comprises incorporating therewith from about 0.1% to about 5% by weight based on the weight of the cellulose acetate of a compound having the formula:

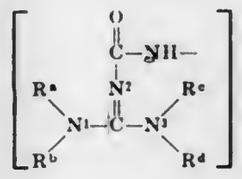
wherein R_1 and R_2 are alkyl of from 1 to about 12 carbon atoms and R_3 is a radical selected from the group consisting of alkyl of 1 to about 50 carbon atoms, alkenyl of 3 to about 50 carbon atoms, and the hydroxy, halo, alkoxy, cyano, carbalkoxy, aryloxy and aryl derivatives thereof.

3,275,463
COATING COMPOSITIONS COMPRISING SUBSTITUTED GUANIDINE DRYING ACCELERATORS

Robert A. Braun, Newark, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Sept. 18, 1962, Ser. No. 224,506
5 Claims. (Cl. 106—287)

1. A coating composition comprising a 2-vinyl cyclic acetal compound polymerizable in air, a siccative metal salt and from 0.001% to 5.0% of at least one N^2-carbamoyl-N^1,N^1,N^3,N^3-tetrasubstituted guanidine selected from the class represented by the following structures:



and

in which:

x is an integer from 1 to 6;
y is an integer from 0 to $6-x$;

G is an (N^1,N^1,N^3,N^3-tetrasubstituted guanidine-N^2) carboxamido radical having the following structure:

wherein:

R^a, R^b, R^c and R^d are selected from the class consisting of (1) monovalent hydrocarbyl, (2) substituted hydrocarbyl radicals free of groups reactive with isocyanate and free of aromatic unsaturation, and (3) when R^a combined with R^b, and R^c combined with R^d, they are divalent alkylene, alkenylene and oxyalkylene radicals;
R is a monovalent organic radical having 1 to 12 carbon atoms and free of isocyanate reactive groups;
R^1 is a polyvalent organic radical having a valence equal to $x+y$ and free of isocyanate reactive groups;
B is hydrogen or an isocyanate radical.

3,275,464
YELLOW PIGMENT AND METHOD OF PREPARATION

Erich Tanke, Bensheim-Auerbach, Germany, assignor to Vereinigte Ultramarinfabriken Aktiengesellschaft vormals Leverkus, Zeltner & Consorten, Cologne, Germany

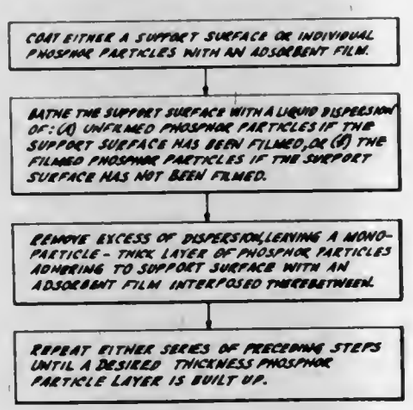
No Drawing. Filed July 15, 1963, Ser. No. 295,237
Claims priority, application Germany, July 17, 1962, V 22,795
4 Claims. (Cl. 106—288)

1. A method for preparing an inorganic yellow pigment comprising heating 100 parts of kaolin with about 4 to 20 parts of a compound containing a member of the group consisting of SCN and SeCN and selected from the class consisting of thiourea, ammonium rhodanide, alkali metal rhodanides, alkaline earth metal rhodanides, and the corresponding selenium compounds, for a period of about 3 to 7 hours at a temperature of about 180 to 210° C.

3,275,465
DESIGN OUTLINE TRANSFER SHEET

Harry Charles Rathke and Norman M. Briggs, Chicago, Ill., assignors to The Meyercord Co., Chicago, Ill., a corporation of Illinois

Filed Apr. 24, 1962, Ser. No. 189,818
4 Claims. (Cl. 117—3.1)



1. A design outline transfer sheet which comprises essentially; a backing member consisting of a thin flexible sheet relatively non-absorbant to oils having relatively smooth surfaces and being sufficiently strong to be secured to a plane surface by an edge thereof and adapted to be pressed into intimate contact with said plane surface without tearing, said sheet having a tacky non-drying paste-like marking composition applied to one of said smooth surfaces in outline form as a decorative design, said marking composition comprising a major proportion of a petroleum jelly as a base mixed with a minor proportion of a waxy solid dispersed throughout said petroleum jelly as an extender and a finely divided powdered oil-absorbant material as an absorbent for said petroleum jelly and having dispersed therethrough as a coloring agent a metal containing pigment which passes a standard sulphur-chlorinate pigment stability test and is free of organic dyes, a portion of said non-drying paste-like marking composition being transferable to said plane surface by the application of pressure to the surface of said sheet opposite said smooth surface having the marking composition thereon, and said backing member being removable from said plane surface as a unit for application of said design to another plane surface.

3,275,466
METHOD OF ADHERING PARTICLES TO A SUPPORT SURFACE

Ray D. Kell, Princeton, N.J., assignor to Radio Corporation of America, a corporation of Delaware

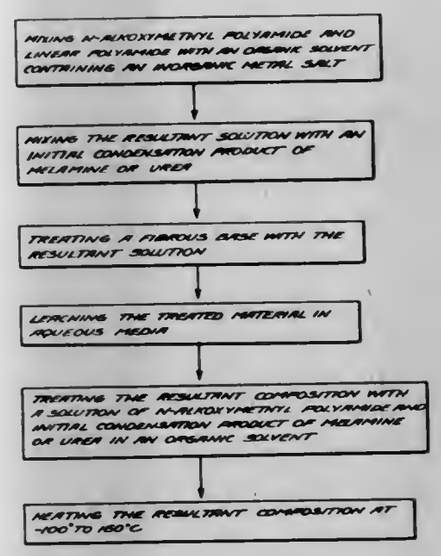
Filed May 3, 1965, Ser. No. 457,241
22 Claims. (Cl. 117—33.5)

1. The method of making a structure comprising the elements of: (a) a support surface and (b) colloidal solid particles, said methods comprising the steps of:

(1) coating one only of said elements with a protective colloid particle-adsorptive material, whereby at least a portion of said material is adsorbed to said one of said elements,
(2) then washing said one of said elements in a solvent for said material to remove unadsorbed material from said one of said elements,
(3) then dispersing said solid particles in a quantity of a liquid which is devoid of said material and in which said particles are insoluble,
(4) and bathing said support surface with said dispersion to adsorptively adhere said particles to said support surface.

3,275,467
COATED GRAPHITE AND METHOD OF COATING

Ervin Colton, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis.



Filed Apr. 26, 1963, Ser. No. 275,979
4 Claims. (Cl. 117—46)

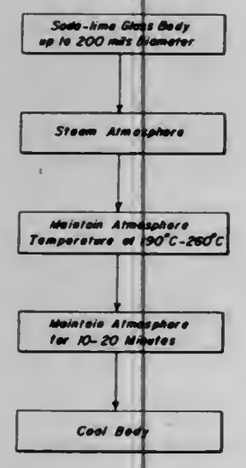
1. The method of rendering graphite articles abrasion and oxidation resistant the steps comprising, depositing a silicide coating selected from the group consisting of hexaboron silicide and tetraboron silicide onto the said graphite article by flame spraying means, said silicide coating having a thickness of from about 3 to about 10 mils, heating the silicide coating at a temperature of from about 1000 to 1500° C. for a period of about one-fourth to one hour in a nitrogen-free inert atmosphere, and again heating the said coated graphite article at a temperature in excess of 700° C. for a period of about one-fourth to one hour in an atmosphere containing oxygen.

3,275,468
METHOD FOR THE PRODUCTION OF ARTIFICIAL LEATHER

Tomoo Aoki, Sennan-gun, Japan, assignor to Toyo Cloth Company, Limited, Sennan-gun, Japan, and Toyo Rayon Company, Limited, Chuo-ku, Japan

Filed Sept. 4, 1962, Ser. No. 221,374
6 Claims. (Cl. 117—63)

1. Method of preparing artificial leather comprising mixing at least one species of N-alkoxymethyl polyamides and one species of synthetic linear polyamides with a solution in a solvent of an inorganic metal salt selected from the group consisting of lithium chloride, calcium chloride, magnesium chloride and zinc chloride to form a solution substantially of 5 to 40 mol percent alkoxymethylation, said N-alkoxymethyl polyamide being prepared by alkoxymethylating a member selected from the

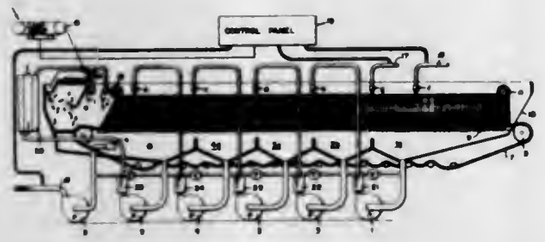


group consisting of synthetic linear polyamides and polythioamides with an alkoxymethyl group having less than 12 carbon atoms in the alkoxy group, said solvent being selected from the group consisting of aliphatic alcohols having less than 6 carbon atoms and ethylene chlorohydrine, treating a fibrous base with the resultant solution, and leaching in aqueous media the treated material to dissolve off the metal salt.

3,275,469
SEPARABLE BOND ASSEMBLY
Fred Streit, Fords, N.J., assignor, by mesne assignments, to Peelbond Products, Inc., South Hackensack, N.J., a corporation of New Jersey
Filed Apr. 12, 1961, Ser. No. 102,413
3 Claims. (Cl. 117—76)

1. A strippable laminate assembly comprising a fibrous web, a first substantially continuous layer of a hydrophobic synthetic organic thermoplastic resinous material having a substantially non-volatile wetting agent dispersed therein superimposed upon a surface of said web, the fibers of said web along said web surface being imbedded in said first layer, and a second layer of an aqueous adhesive superimposed upon and penetrating the opposite face of said first layer for only a part of the depth of said first layer.

3,275,470
GLASS BODIES AND METHODS OF TREATMENT THEREOF
Richard J. Charles, Schenectady, N.Y., assignor to General Electric Company, a corporation of New York
Filed Feb. 18, 1963, Ser. No. 259,793
3 Claims. (Cl. 117—106)



1. A method for substantially increasing the strength of a solid soda-lime glass body having an initial diameter of up to 200 mils in thickness which consists in providing an atmosphere containing 80 percent to 100 percent saturated steam, maintaining said atmosphere in a temperature range of about 190° to 260° C., subjecting said body to said atmosphere for a period of about 10 to 20 minutes whereby a corrosion product layer is formed on the surface of said body, and cooling said body.

3,275,471
METHOD OF PREPARING AN OXIDATION RESISTANT ARTICLE
Carl E. Lowell, East Cleveland, and Roland P. Goton, Lakewood, Ohio, assignors to Union Carbide Corporation, a corporation of New York
No Drawing. Original application Oct. 12, 1959, Ser. No. 845,664. Divided and this application July 3, 1961, Ser. No. 128,620
3 Claims. (Cl. 117—169)

1. The method of rendering a nuclear reactor component containing graphite substantially resistant to oxidation which comprises dipping said component into a slurry consisting of substantially equal proportions of finely-divided silicon and finely-divided silicon carbide, an amount of suspending medium substantially equal to the total amount of silicon plus silicon carbide in said slurry, and an amount of a suspension aid sufficient to maintain said silicon and said silicon carbide suspended in said suspending medium, said silicon and said silicon carbide being in a particle size less than the desired coating thickness; removing said component, having a coating thereon, from said slurry; and firing said component at about 1415° C. to 1500° C. for between 5 and 25 seconds, thereby producing a coating of silicon having silicon carbide dispersed therein.

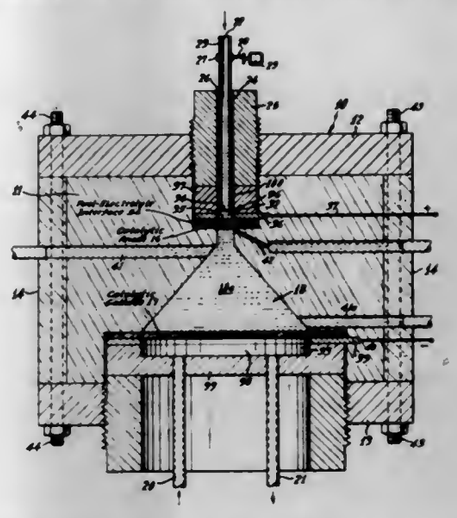
3,275,472
CONTINUOUS PROCESS FOR THE EXTRACTION OF SUGAR AND APPARATUS THEREFOR
Mohamed H. Tantawi, Abdel M. M. A. Rahman, and Saad F. Guindi, all of Cairo, United Arab Republic, assignors to Societe des Sucreries et de Distillerie d'Egypte, Cairo, United Arab Republic
Filed Apr. 21, 1964, Ser. No. 363,057
Claims priority, application United Arab Republic, Sept. 30, 1961, 1,200/61
7 Claims. (Cl. 127—5)

6. An apparatus for the extraction of sugar and bagasse from sugar cane for use in carrying out the diffusion by counter-current diffusion, which comprises a metallic elongated horizontal trough having two metallic vertical longitudinal side walls to which a fixed metallic horizontal perforated bottom is attached at the lower edges, said trough being supported on a fixed supporting steel structure, means for delivering the sugar cane to the charging end of the trough, at least one pair of twin endless travelling chains moving horizontally side by side at the same speed on the surface of the horizontal stationary perforated screen, entraining slowly an even bed of sugar cane and its bagasse, said twin endless chains having spaced metallic horizontal slats attached to the lateral sides of the chains transversally to its travel, a plurality of distributors arranged over the said bed of sugar cane and bagasse and being so spaced that sugar solutions which are distributed therefrom are sprayed on said travelling bed, metallic receiving tanks beneath the perforated screen, side by side, for receiving the solutions draining from the bed of sugar cane and bagasse, said tanks being piped independently to circulating pumps allowing each of the draining sugar solutions to be conducted to the respective distributor, said tanks together with the metallic trough forming one horizontal continuous section being supported on the fixed supporting steel structure.

3,275,473
BATTERY GRID
Robert E. Barnett and James M. Dines, both of Joplin, Mo., assignors to The Eagle-Picher Company, Cincinnati, Ohio, a corporation of Ohio
Filed Jan. 3, 1964, Ser. No. 335,498
3 Claims. (Cl. 136—64)

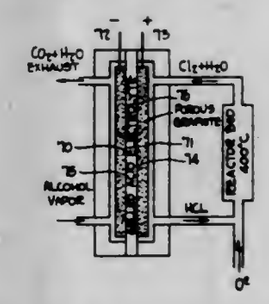
1. A grid for use in electrolytic cells, said grid having a generally rectangular main portion and a tab portion extending from one edge of said rectangular main portion, said grid being formed of a fine wire mesh screen, said tab and an adjacent edge portion of said screen extending from 1/10 to 1/4 of the height of said screen being reinforced by metal applied to said screen by dipping said screen in a molten bath of said metal, said metal filling the interstices of said tab and adjacent edge portion, the interstices of the remainder of said screen being open.

3,275,474
OXYGEN POWER ELECTRODES
René Buvet, Cachan, France, assignor to Electricite de France-Service National, Paris, France, a national French organization
No Drawing. Filed Sept. 5, 1961, Ser. No. 135,794
Claims priority, application France, Mar. 9, 1961, 855,101, Patent 1,291,005
2 Claims. (Cl. 136—86)



1. A method of operating an electrolyte oxidation-reduction device to increase the density of the current produced by the device comprising:

treating an electrolytic solution prior to injection into said device to increase the solubility of oxygen there therein over normal solubility by dissolving oxygen under pressure in the electrolyte, forming an oxygen-enriched liquid electrolyte solution free of oxygen bubbles; and



injecting said enriched solution into said device and in continuous circulation through a catalytic electrode having a porosity of greater than 50 percent so that an oxidation-reduction reaction of increased efficiency takes place over a substantial thickness of the said electrode.

3,275,475
FUEL CELL AND METHOD OF SHIFTING THE FUEL ELECTROLYTE INTERFACE
Johann G. E. Cohn, West Orange, N.J., and Peter A. Danna, Brooklyn, N.Y., assignors to Engelhard Industries, Inc., Newark, N.J., a corporation of Delaware
Filed Sept. 13, 1962, Ser. No. 223,872
3 Claims. (Cl. 136—86)

2. A fuel cell comprising a container, a porous catalytic anode in the container, a porous catalytic cathode in the container spaced from the anode, an acid electrolyte contacting the anode and cathode, means for maintaining an organic liquid fuel in contact with the anode, means for passing an oxidizer in contact with the cathode, and means for frequently changing the pressure of the fuel relative to the electrolyte thereby frequently shifting a fuel-electrolyte interface in the porous catalytic anode to reach newly-active catalyst sites in the anode, whereby anodic polarization is materially reduced, and wherein the pressure changing means comprises an inner fuel feed tube disposed within an outer tubular passage of the container and closely spaced therefrom, the outlet end of the inner tube being closely spaced from a face of the porous catalytic anode, and means for rapidly oscillating the inner tube within the outer tubular passage.

3,275,476
ELECTROCHEMICAL REACTION APPARATUS
Robert A. Rightmire, Twinsburg, and Philip S. Fay, Cleveland, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
Filed Sept. 20, 1961, Ser. No. 139,428
2 Claims. (Cl. 136—86)

1. A process for the production of electrical energy from an electrochemical reaction at temperatures ranging from about room temperature to about 200° C. in an electrochemical reaction system characterized by a relatively reducible subsystem and a relatively oxidizable subsystem, each including an electrochemically reactant material adapted to coact electrochemically through an aqueous ion-transfer medium, each of said subsystem including an electrode adapted to be coupled to an external electron conducting circuit, and an aqueous ion-transfer medium disposed between said electrodes and forming an interface therewith, said process comprising the steps of:

(a) adding sulphuric acid activator to the ion-transfer medium to a concentration equivalent to 6 molar acid;

(b) supplying an alcohol fuel containing from 1 to 4 carbon atoms to the relatively oxidizable subsystem;

(c) supplying elemental halogen antifuel to said relatively reducible subsystem;

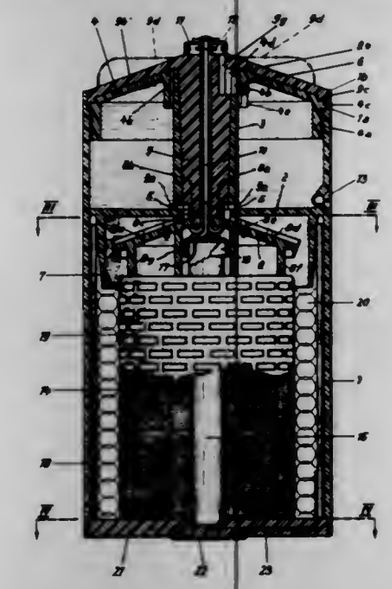
(d) maintaining each of said subsystems in the liquid phase;

(e) removing the reaction by-product from said relatively oxidizable subsystem;

(f) removing hydrogen halide reaction by-product from said relatively reducible subsystem in the liquid phase oxidizing said hydrogen halide by-product externally

of said reaction system in the gas phase over a vanadium pentoxide catalyst to convert it to water and gaseous halogen antifuel; and

(g) recycling the reconstituted halogen to said relatively reducible subsystem.



3,275,477

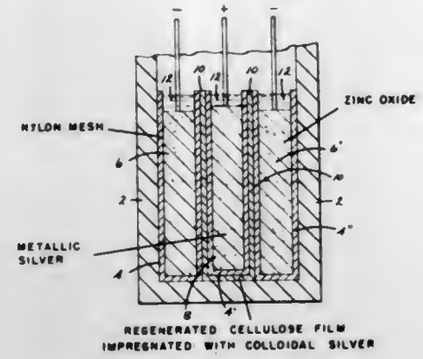
ROD SHAPED BATTERY WITH SYNTHETIC MATERIAL CASING

Ludwig Schmid-Wildy, Irschenberg uber Miesbach, Upper Bavaria, Germany

Filed Jan. 7, 1964, Ser. No. 336,262
Claims priority, application Germany, Jan. 8, 1963, Sch 32,571
4 Claims. (Cl. 136—90)

1. In combination, a closed cylindrical housing of synthetic material, having an integral partition extending transversely of the housing and dividing said housing into an upper tank chamber and a lower chamber, said partition having passages for the flow of electrolyte from said upper tank chamber to said lower chamber, air inlets for said tank chamber, valve means for opening and closing said passages and said air inlets, said valve means comprising a cylinder extending centrally and upwardly of said partition to the top of said housing, a closing plug rotatable in said cylinder, said cylinder having bottom openings communicating with said passages for electrolyte in said partition, the top portion of said cylinder having an air inlet opening, said closing plug having bottom recesses alignable with said bottom openings and said passages, said closing plug having a top recess for entry of air, alignable with said air inlet opening, a carbon briquette mounted in said lower chamber, a zinc

cylinder extending about said briquette and spaced therefrom, first contact means secured to said carbon briquette and extending outwardly through the top of said housing and second contact means secured to said zinc cylinder and extending outwardly of the bottom of said housing.



3,275,478

METHOD OF MAKING A BATTERY SEPARATOR CONTAINING COLLOIDAL METAL

Charles M. Rosser, Wallingford, and Richard A. Glinski, Clifton Heights, Pa., assignors to FMC Corporation, Philadelphia, Pa., a corporation of Delaware

Original application Feb. 21, 1963, Ser. No. 261,940. Divided and this application Mar. 18, 1965, Ser. No. 440,837
6 Claims. (Cl. 136—148)

1. A method of preparing a semi-permeable battery separator which comprises immersing a film of regenerated cellulose in a dilute aqueous solution of a water-soluble salt of a metal selected from the group consisting of silver and gold for at least about 0.1 minute, then immersing said film in a dilute aqueous alkaline bath

and exposing it to actinic rays for a sufficient length of time to deposit at least about 0.5% based on the weight of the film, of the metal of said water-soluble salt in colloidal form within the pores of said film, and washing and drying the film.

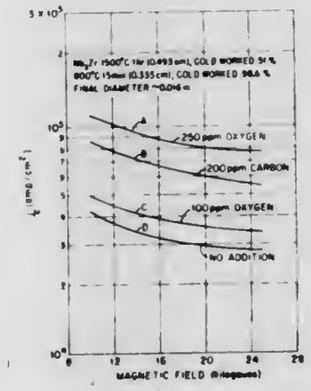
3,275,479

PYROMETRIC LANCE APPARATUS

Edward J. Binkowski, Philadelphia, Pa., assignor to Pyrotemp Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Filed Jan. 15, 1963, Ser. No. 251,562
6 Claims. (Cl. 136—233)

4. An expendable plug-in temperature sensing unit for use in a pyrometric lance apparatus comprising a body tube; a stepped contact plug capping the distal end of said body tube including a first central longitudinally distally projecting cored step which is circular in cross section, a first core plug within the core of said first step, a second offset cored step which projects distally less than said first step, and a second core plug within the core of said second step; a thermocouple mounted at the proximal end of said body tube; polarized lead wires connecting to said thermocouple and extending through said body tube and along the sides of said steps and down into their respective cores wherein they are secured by one of said core plugs, said wires being in transverse



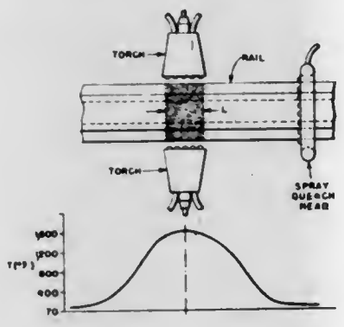
radial alignment, and a tubular shield within said body tube encompassing one of said lead wires.

3,275,480

METHOD FOR INCREASING THE CRITICAL CURRENT DENSITY OF HARD SUPERCONDUCTING ALLOYS AND THE IMPROVED PRODUCTS THEREOF

Jesse O. Betterton, Jr., Oak Ridge, Tenn., George D. Kneip, Jr., Concord, Mass., and Dewey S. Easton and James O. Scarbrough, Lenoir City, Tenn., assignors to the United States of America as represented by the United States Atomic Energy Commission

Filed June 22, 1965, Ser. No. 475,303
17 Claims. (Cl. 148—2)



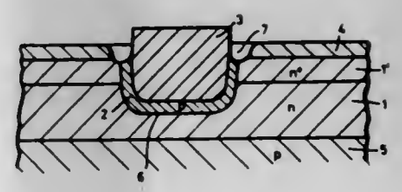
7. A method of increasing the critical current density of a hard superconducting alloy which comprises mixing said alloy in the liquid state with an additive selected from the group oxygen, carbon, nitrogen, boron, and hydrogen, homogenizing the resultant mixture at a temperature below the melting point of said alloy to effect uniform distribution of said additive, cooling the resultant homogenized alloy to induce formation of a finely divided precipitated phase containing said additive and thereafter reducing said alloy to a desired gauge size.

3,275,481

METHOD OF FLAME HARDENING WELDED STRUCTURES

Clyde M. Adams, Jr., Lexington, Mass., assignor to American Machine & Foundry Company, a corporation of New Jersey

Filed Feb. 21, 1964, Ser. No. 346,550
8 Claims. (Cl. 148—127)



7. A method of rehardening conventional rails in which steel sections weighing between approximately 132 and 175 pounds per yard have been joined by welding whereby a soft region has been produced in the vicinity of each welded joint, comprising the steps of heating said region by gas-flame torch means producing a heat input rate capable of raising the steel temperature to approximately 1600° F. within five to six minutes; then moving said source along the rail toward one side of said region at a rate of approximately two inches per minute until an advancing thermal front is established wherein the temperature drops sharply from approximately 1600° F. to below approximately 900° F. within a very short distance along the rail length; then reversing the direction of travel of said torch means toward the other side of said region; moving a quenching fluid spray over said rail at a distance behind the torch means; continuing the movement of said torch means toward said other side of said region at approximately two inches per minute until a second said thermal front is similarly established at said other side; continuing the movement of said quenching fluid spray across said region and said second thermal front; and tempering the rail by passing said torch means across same at a speed of 6 to 8 inches per minute.

3,275,482

SEMICONDUCTOR P-N JUNCTION DEVICE AND METHOD OF ITS MANUFACTURE

Winfried Meer, Munich, Germany, assignor to Siemens & Halske Aktiengesellschaft, Berlin and Munich, Germany, a corporation of Germany

Filed Sept. 23, 1964, Ser. No. 398,636
Claims priority, application Germany, Sept. 25, 1963, S 87,500
18 Claims. (Cl. 148—177)

8. The method of producing a semiconductor p-n junction device, which comprises depositing a barrier-free metal coating upon the surface of a semiconductor body having one conductance type at said coating, placing a metal pellet containing dopant for producing the other conductance type in said body upon the body, the pellet contacting the coating at least at the pellet margin, heating the body and pellet to alloying temperature and thereby alloying the pellet through said coating with said body to produce an alloy-doped recrystallization zone of the other conductance type between said pellet and said body whereby a p-n junction is formed and a groove around said pellet is formed in said coating in which groove said p-n junction emerges at the surface.

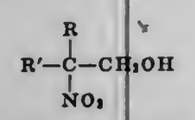
3,275,483

REACTION PRODUCTS OF NITRILE CONTAINING DECABORANES AND OLEFINIC RUBBER

Murray S. Cohen, Morristown, Marvin M. Fein, Westfield, Joseph Green, Dover, and George J. Donovan, Morristown, N.J., assignors to Thiokol Chemical Corporation, Bristol, Pa., a corporation of Delaware

No Drawing. Filed Oct. 21, 1960, Ser. No. 64,217
17 Claims. (Cl. 149—22)

1. A method for the production of an organoboron compound useful as a fuel which comprises reacting a borane selected from the group consisting of bis(nitrile) decaboranes and bis(nitrile)alkyldecaboranes with a material consisting essentially of an olefinic rubber, the bis(nitrile)decaboranes being the reaction products of decaborane with a cyano alkane having from 1 to 12 carbon atoms, and the bis(nitrile)alkyldecaboranes being the reaction products of a lower alkyl decaborane with a cyano alkane having from 1 to 6 carbon atoms.



3,275,484
PERCUSSION SENSITIVE PYROTECHNIC OR PYROPHORIC ALLOY-TYPE PRIMING MIXTURE
Donald S. Foote, Greens Farms, and Richard A. Sahlin, Fairfield, Conn., assignors to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
No Drawing. Filed June 1, 1964, Ser. No. 371,813
8 Claims. (Cl. 149—38)

1. A percussion sensitive ammunition priming mixture which comprises as its essential ingredients in an initimate mechanical mixture from about 25% to about 60% of an active pyrophoric alloy and from about 40% to about 70% of an active inorganic oxidizing agent selected from the group of active inorganic oxidizing agents consisting of barium nitrate, lead dioxide, potassium perchlorate, red lead oxide, potassium chlorate and lead nitrate.

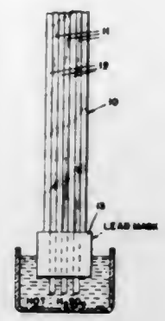
6. A percussion sensitive ammunition priming composition as defined in claim 1 in which substantially 31% of a powdered pyrophoric alloy of misch metal and magnesium is in admixture with substantially 45% of powdered barium nitrate, substantially 20% of powdered lead dioxide, and substantially 4% of a sensitivity modifying agent.

3,275,485
AMMONIUM NITRATE SLURRY SENSITIZED WITH NITRO SUBSTITUTED ALKANOLS
Richard S. Egly, West Terre Haute, Ind., assignor to Commercial Solvents Corporation, a corporation of Maryland
No Drawing. Filed July 30, 1964, Ser. No. 386,421
4 Claims. (Cl. 149—47)

1. Ammonium nitrate slurry compositions suitable for use in the explosive art consisting essentially of ammonium nitrate, about 2 to 10% by weight water, and about 10 to 50% by weight of a nitro compound having the formula

where R is selected from the group consisting of hydrogen, lower alkyl and lower hydroxyalkyl and R′ is selected from the group consisting of lower alkyl and lower hydroxyalkyl.

3,275,486
METHOD OF REMOVING INSULATING MATERIAL FROM ELECTRICAL CONDUCTORS
Duane A. Schroeder, East Dundee, Ill., assignor to Methode Electronics, Inc., Chicago, Ill., a corporation of Illinois
Filed July 19, 1963, Ser. No. 296,224
3 Claims. (Cl. 156—3)



1. The process of removing polyester insulating material from copper conductive elements of a flexible wiring unit leaving a clean, sharp end margin on the remaining polyester material which comprises:

(A) masking an area of a flexible wiring unit formed by copper conductive elements encapsulated in polyester insulating material adjacent the intended points of electrical contact with lead foil having one of its faces coated with a pressure sensitive adhesive by placing the adhesive surface of the masking foil against the polyester and pressing the foil into intimate contact with the surface of said unit.

(B) flooding the area of polyester to be removed with sulfuric acid having a concentration of between about 1.53 to 1.84° Bé. at a temperature of between 135° F. and the boiling point of the acid,

(C) removing the unit from contact with said acid before deleterious attack on the lead and copper begins,

(D) neutralizing any adherent acid and drying the unit, and

(E) removing the lead mask to provide a flexible wiring unit having clean exposed conductive elements adapted for electrical connection.

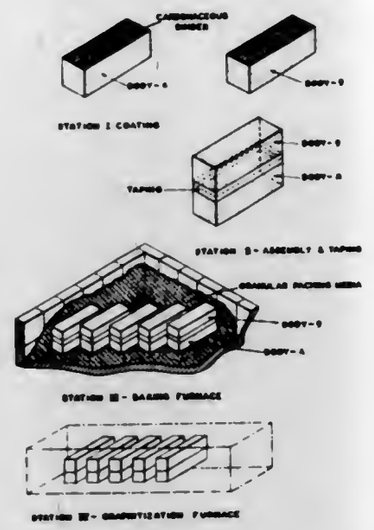
3,275,487
METHOD AND AUTOMATIC APPARATUS FOR PRODUCING PILE SURFACED PLASTIC SHEETING
Jerome H. Lemelson, 8B Garfield Apartments, Metuchen, N.J.
Filed Jan. 7, 1963, Ser. No. 249,921
9 Claims. (Cl. 156—72)

1. A method of manufacturing a sheet of flexible plastic material with a pile-like surface structure comprising the steps of:

(a) providing a sheet of flexible thermoplastic material,

(b) rendering at least a portion of said sheet including a major surface thereof in a molten condition,

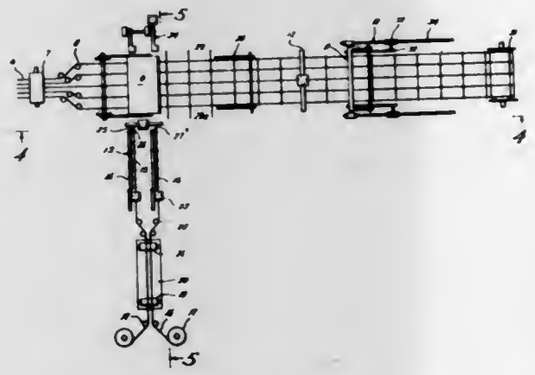
(c) continuously feeding said sheet in a predetermined path,



(d) feeding a plurality of filaments of textile material against the molten portion of said sheet,

(e) embedding at least part of each filament within the molten portion of the sheet and,

(f) solidifying the molten sheet material to retain the embedded portions of said filaments therein and provide a composite flexible sheet simulating a haired or furred material.



9. Automatic production apparatus comprising in combination with a textile loom for continuously forming a web of textile material from textile material feeding said loom, including means for guiding said web in a predetermined path, a plastic sheet extrusion die, means for extruding molten plastic material from said die as a continuous sheet, means for feeding said sheet of plastic at substantially the speed at which said textile web feeds from said loom, means for continuously contacting said sheet of plastic onto said textile web and means for continuously feeding a plurality of filament elements into the plastic material while it is in a molten state to secure said filaments thereto upon solidification of said plastic material.

3,275,488
FABRICATION OF CARBON AND GRAPHITE BODIES
Bruce L. Bailey, Lewiston, Berch Y. Karagoz, Buffalo, and Paul Peller, Niagara Falls, N.Y., assignors to Great Lakes Carbon Corporation, a corporation of Delaware
Filed Aug. 5, 1960, Ser. No. 47,628
10 Claims. (Cl. 156—89)

1. A method of fabricating carbonaceous bodies which comprises: (A) shaping carbonaceous mixtures into desired dimensioned "green" bodies by molding or extrusion; (B) coating a surface of at least one of said bodies which are to be joined with a carbonaceous bonding agent; (C) joining the two bodies together with the bonding agent at their interface; (D) surrounding the joint formed by the two pieces being joined with a support tape to prevent escape of binder; and (E) heating the pieces in a baking furnace in such a manner that the composite of the joined pieces is brought uniformly to a baked condition after surrounding said composite with a packing material.

3,275,489
METHOD AND APPARATUS FOR PRODUCING UNWOVEN FABRIC
Harry Talv, Nashville, Tenn., assignor to Ferro Corporation, Cleveland, Ohio, a corporation of Ohio
Filed Feb. 1, 1962, Ser. No. 170,605
3 Claims. (Cl. 156—181)

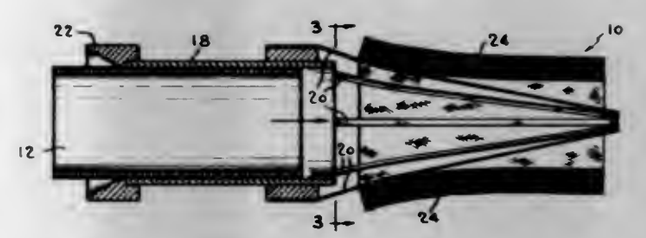
1. The method for producing a nonwoven reinforcing fabric comprising the steps of:

(a) intermittently and alternately advancing and stopping a band consisting of a single layer of a plurality of fibrous warp strands while continually in substantially equal tension, said strands arranged and maintained in generally parallel, side-by-side relationship, said strands having a thermosetting resin on the surface thereof,

(b) disposing individually across the tops of said warp strands single, substantially straight weft parallel strands derived from a substantially continuous source thereof, said weft strands disposed in transverse relationship with respect to each and every said warp strand traversed,

(c) bringing said weft strands, as disposed in step (b), in substantial contact with each said warp strand at the points of juncture of said weft strands with said warp,

said weft strands in step (b) repeatedly and sequentially receiving each of said weft strands, respectively, each time said warp is stopped, and



(d) while maintaining each said weft strand respectively in a state of stationary tension during and at the point in space of the initial contacting thereof with said warp strands in step (c), and while said warp strands are stationary, fixing said weft strands to each of said warp strands in a substantially permanent union at their respective junctures, by applying heat to said junctures,

(e) each said weft strand, respectively, maintained at substantially the same degree of tension during fixing thereof to said warp strands,

(f) severing said fixed weft strand at a point between said warp strands and said source of weft while said weft is in its position in space as set forth in step (d),

following completion of step (f) above, advancing said warp strands a predetermined distance, and repeating the cycle initiated in step (b) above, to provide a nonwoven fabric having a single layer of warp and a single layer of weft, wherein the tension in each of said warp strands is substantially equal, and the tension in each of said weft strands is substantially equal, when said warp strands are positioned in parallel, side-by-side relationship at the maximum separation permitted by any of said weft strands.

3,275,490
METHOD OF MAKING A PAINT ROLLER COVER
Kenneth R. Stoddart, Fond du Lac, Wis., assignor to Bestt Rollr Inc., Fond du Lac, Wis., a corporation of Wisconsin
Filed Mar. 5, 1963, Ser. No. 262,896
3 Claims. (Cl. 156—294)

1. A method of making a paint roller cover comprising the steps of; coating the grooved outside surface of a core with adhesive, passing the core through a cylinder which engages the core and removes excess adhesive while leaving the adhesive in the grooved portions substantially undisturbed, engaging the inside surface of a tubular pad by a plurality of rods which extend longitudinally in respect to said tubular pad and are arranged at one end of said pad in substantially circular relationhsip, advancing said core after it has passed through said cylinder into said one end thereby positioning said rods between said core and pad, simultaneously stripping said core and pad off said rods after said core has been fully inserted in said pad, and permitting the adhesive to dry thereby bonding said pad to said grooved outside surface.

3,275,491
LAMINATING WITH WET ADHESIVE WEBS

Donald Verne Redfern, Seattle, Wash., assignor to Weyerhaeuser Company, Tacoma, Wash., a corporation of Washington

No Drawing. Continuation of application Ser. No. 37,513, June 20, 1960. This application Jan. 8, 1965, Ser. No. 424,213

7 Claims. (Cl. 156—313)

1. The process of laminating comprising

uniformly applying an aqueous, alkaline, phenol-formaldehyde resinous adhesive composition on both surfaces of an absorbent paper web

said adhesive composition being applied as a liquid including resin solids having a formaldehyde to phenol molar ratio between about 1.5 to 1 and 3 to 1

said adhesive composition being applied to said web at the rate of at least about 3 pounds of resin solids per 1,000 square feet of paper web;

immediately without substantial reduction of moisture from said liquid adhesive composition interposing said resin bearing paper web between the opposed surfaces of two laminae to be joined, and

thereafter subjecting said laminae and said interposed web to heat and pressure to consolidate and bond the same.

3,275,492
OPAL GLASS WITH A LOW COEFFICIENT OF THERMAL EXPANSION

Jean Leon Herbert, Saint Pierre-les-Nemours, Seine-et-Marne, France, assignor to Société des Verreries Industrielles Réunies du Loing, Paris, France

No Drawing. Filed Jan. 29, 1962, Ser. No. 169,661

Claims priority, application France, Feb. 3, 1961, 851,644

6 Claims. (Cl. 161—1)

1. An opacifiable borosilicate glass composition having a coefficient of expansion on the order of 25 to 50×10^{-7} consisting essentially on a mol percent basis of:

(a) 10–27% (equivalent to about 12–30 weight percent of B_2O_3

(b) 66–81% (equivalent to about 62–76 weight percent) of SiO_2

(c) 3–24% of an opacifying agent (RO) selected from the group consisting of ZnO, MgO, CaO, BaO, NiO, MnO, CoO, CuO and mixtures thereof,

(d) 1–7% alkali metal oxides (R_2O) selected from the group consisting of Li_2O, K_2O and Na_2O, and wherein there is an R_2O/RO mol ratio of 0.1 to 1.0 when K_2O and Na_2O are present and a mol ratio of 0.07 to 1.5 when Li_2O is present.

3,275,493
GLASS BODY HAVING SURFACE CRYSTALLINE LAYER THEREON AND METHOD OF MAKING IT

John F. MacDowell, Painted Post, N.Y., assignor to Corning Glass Works, Corning, N.Y., a corporation of New York

Filed Aug. 8, 1962, Ser. No. 215,661

6 Claims. (Cl. 161—1)

1. A method of manufacturing a surface-crystallized glass body having a sound crystalline surface layer of cordierite crystals thereon comprising the steps of melting a glass-forming batch composition consisting essentially, by weight, of 40–57% SiO_2, 10–22% MgO, 30–40% Al_2O_3, 0.5–6% total of at least one modifying oxide selected from the group consisting of As_2O_3 and Sb_2O_3, and 0–6% total of at least one supplemental oxide selected from the group consisting of K_2O, Rb_2O, Cs_2O, PbO, CaO, Bi_2O_3, and Ta_2O_5, simultaneously cooling the melt below the transformation point of said melt and forming a glass shape therefrom, exposing said shape to a temperature of at least about 860° C., but not more than about 950° C., maintaining thereat for a time sufficient to attain surface crystallization, and thereafter cooling said shape to room temperature.

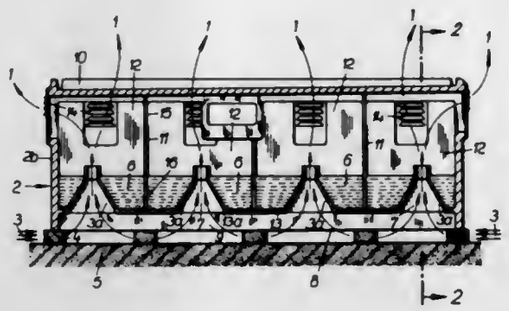
4. A glass body having a sound crystalline surface layer of cordierite crystals thereon, said crystals resulting from crystallization in situ from a glass body formed from a batch composition consisting essentially, by weight, of 40–57% SiO_2, 10–22% MgO, and 30–40% Al_2O_3, 0.5 to 6% total of at least one modifying oxide selected from the group consisting of As_2O_3 and Sb_2O_3, and 0–6% total of at least one supplemental oxide selected from the group consisting of K_2O, Rb_2O, Cs_2O, PbO, CaO, Bi_2O_3, and Ta_2O_5, said glass body consisting essentially of the uncrystallized portion of the glass remaining after crystallization of said crystals.

3,275,494
EMBOSSED ARTICLE FOR 3-DIMENSIONAL PRINTING COMPRISING A HOT MELT COATING

Marion O. Brunson and James E. Huffaker, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N.Y., a corporation of New Jersey

No Drawing. Filed May 21, 1962, Ser. No. 197,173

7 Claims. (Cl. 161—33)



1. An embossed flexible sheet having a 3 dimensional appearance comprising a fibrous substrate which carries printing thereon upon which is securely adhered a flexible, tough, transparent, abrasion-resistant layer of a coating composition comprising a blend of 20–60% by weight of a copolymer of ethylene and ethyl acrylate having a melt index of 15 to 100 and containing an ethyl acrylate concentration of between 5 and 30%, and 40–80% polyethylene having a molecular weight of 4,000 to 12,000 and a density of 0.90 to 0.972 and having on the surface of the sheet an embossed lenticulated pattern.

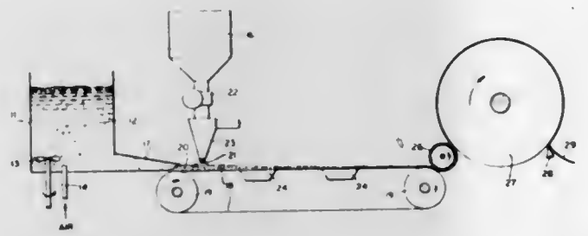
3,275,495
MACHINE STAND AND COOLING MEANS THEREFOR

Edmund Lang, Babenhausen, Hesse, Germany, assignor to Elb-Schliff Edmund Lang, Babenhausen, Hesse, Germany

Filed Jan. 31, 1964, Ser. No. 341,649

1 Claim. (Cl. 165—47)

A stand for a machine and the like, comprising a substantially block-shaped member having a top wall forming a mounting for a machine and a bottom wall spaced above the ground and exposed to the surrounding air, at least one partition dividing the interior of said stand into separate chambers, each chamber forming a reservoir for a control liquid and each being vented adjacent the upper portion thereof, and a chimney insert extending upwardly from the bottom of each of said chambers through the liquid and above the level thereof and defining a cooling air flow path from the bottom of said machine upwardly in heat exchange relationship with the liquid surrounding said chimney insert and out through said vent.



3,275,496
METHOD OF PRODUCING NON-WOVEN FABRIC

Kurt Sponsel, Mauerstrasse 51, Dusseldorf-Nord, Germany

Filed Sept. 28, 1964, Ser. No. 399,660

Claims priority, application Germany, Oct. 2, 1963, S 87,701

7 Claims. (Cl. 162—101)

1. The method of producing a non-woven fabric which comprises treating fibers to render them cationically charged, dispersing the charged fibers onto a layer of an anionically charged aqueous synthetic bonding material foam, removing water from the resulting mixture of fibers and foam and drying the bonded fibers.

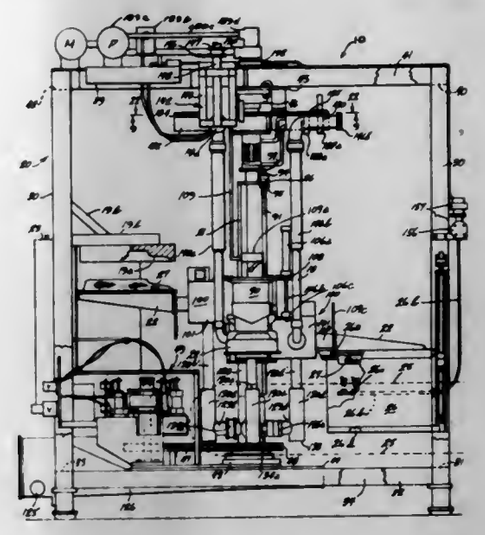
3,275,497
METHOD OF MOLDING A COMBUSTION ELEMENT OF CERAMIC FIBERS ON A POROUS SUPPORT

Gerhart Weiss, Flushing, and Kurt W. Cornely, Syosset, N.Y., assignors to American Thermocatalytic Corp., Mineola, N.Y., a corporation of New York

Original application Jan. 17, 1962, Ser. No. 166,811, now Patent No. 3,179,156, dated Apr. 20, 1965. Divided and this application Sept. 23, 1964, Ser. No. 403,687

3 Claims. (Cl. 162—103)

1. Method of molding a combustion element comprising mixing discrete, amorphous, inorganic, ceramic fibers in a liquid bath containing a refractory metal compound which upon heating converts to the oxide of said metal, adding to the bath containing said fibers granules of a filler which is adapted to separate from said fibers on heating without leaving substantial residue, the filler:fiber ratio being from 2:1 to 24:1, immersing a porous support in said bath, passing bath through said support in a manner so as to deposit on one side of said support material from said bath of greater size than the size of the pores thereof, and heating the support and deposited material sufficiently to convert said refractory metal compound to the oxide of said metal, to evaporate residual bath liquid therefrom and to remove said filler.



3,275,498
PULP MOLDING MACHINE

Donald J. Roth, St. Paul, Minn., Jean E. Zeller, Muskegon, Mich., and Harold V. Kindseth, Minneapolis, Minn., assignors to Bemis Bro. Bag Co., Minneapolis, Minn., a corporation of Missouri

Filed July 12, 1963, Ser. No. 301,929

15 Claims. (Cl. 162—253)

8. In a machine for molding articles by vacuum deposition of fiberous pulp onto a foraminous mold, the combination of a rotatable turret, a drive means for rotating said turret to a plurality of circumferentially spaced operating stations, a pulp container, a mold support means mounted for vertical movement upon said turret, a drive means for moving said mold support means vertically with respect to said turret, a foraminous mold mounted upon

said mold support and a motor mounted upon said support means and operatively connected to said foraminous mold for imparting rotation thereto.

3,275,499
STABILIZED ORGANIC SULPHUR-CONTAINING PHOSPHOROUS INSECTICIDES

Henry Kassler, Dan-y-Graig, Groes, Margam, Glamorgan, England, and Neville Garton Cutler, 22 Hool Fawr, North Cornelly, near Pyle, Glamorgan, England

No Drawing. Filed Mar. 13, 1963, Ser. No. 264,773

5 Claims. (Cl. 167—22)

1. An insecticidal composition having relatively low malodorous characteristics comprising O,O-dimethyl-S-(1,2-dicarbethoxyethyl) phospborodithioate and for each 100 parts by weight thereof, 0.5 part by weight of copper naphthenate and 1 part by weight of methyl ethyl ketone peroxide.

3,275,500
STABILIZED FUNGICIDAL COMPOSITIONS

Franco Pinamonti and Sergio Maccone, Milan, Italy, assignors to Montecatini Società Generale per l'Industria Mineraria e Chimica, Milan, Italy

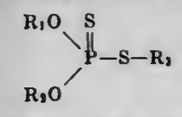
No Drawing. Filed Oct. 28, 1963, Ser. No. 319,555

Claims priority, application Italy, Oct. 30, 1962, 21,323/62

6 Claims. (Cl. 167—22)

5. Stabilized fungicidal composition comprising manganese ethylene-bis-dithiocarbamate and at least 1% of phenylenediamine.

3,275,501
FUNGITOXIC AGENTS



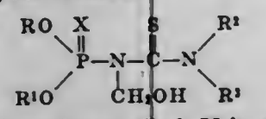
Gerhard Schrader, Wuppertal-Cronenberg, and Paul-Ernst Frohberger, Burscheid, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a German corporation

No Drawing. Filed June 3, 1964, Ser. No. 372,391

Claims priority, application Germany, June 4, 1963, F 39,907

6 Claims. (Cl. 167—22)

1. A method for controlling phytopathogenic fungi which comprises applying to said fungi a fungicidally effective amount of a compound of the formula



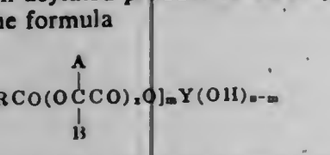
wherein R_1, R_2 and R_3 stand for lower alkyl having up to 4 carbon atoms.

3,275,502
PESTICIDAL PHOSPHORYLATED THIOUREA

Glenn R. Price and Edward N. Walsh, Chicago Heights, Ill., assignors to Stauffer Chemical Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed June 10, 1964, Ser. No. 374,180
10 Claims. (Cl. 167—22)

5. A method of controlling pests which comprises contacting said pests with a pesticidal amount of at least one compound having the formula:



wherein R and R^1 are lower-alkyl, X is selected from the group consisting of sulfur and oxygen, R^2 is a hydroxyalkyl, and R^3 is selected from the group consisting of lower-alkyl and hydroxyalkyl.

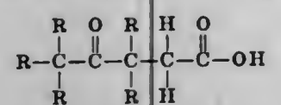
3,275,503
METHOD FOR THE PROTECTION OF LOCI SUSCEPTIBLE TO THE GROWTH OF UNDESIRED MICROORGANISMS

Lawrence F. Marnett and Ralph J. Tenney, Kansas City, Mo., and Jerome B. Thompson, Cumberland, Md., assignors to C. J. Patterson Company, Kansas City, Mo.

No Drawing. Filed Aug. 26, 1964, Ser. No. 392,297
12 Claims. (Cl. 167—22)

1. A method for the protection of loci susceptible to the growth of undesired microorganisms against such growth which comprises subjecting such loci to an effective amount of an acylated product of an α-hydroxy carboxylic acid of the formula

wherein RCO is an acyl radical of a fatty acid of from 8 to 12 carbon atoms, each of A and B are selected from the group consisting of hydrogen and methyl, Y is a cation, x as an average is a number between about 0.3 and 6, n is an integer equal to the valence of the cation Y and m is a number from 1 to n.



3,275,504
METHOD FOR CONTROLLING MICROBIOLOGICAL ORGANISMS WITH COMPOSITIONS COMPRISING HALOGENATED LEVULINIC ACID AND DERIVATIVES

Robert J. Herschler, Camas, Wash., assignor to Crown Zellerbach Corporation, San Francisco, Calif., a corporation of Nevada

No Drawing. Filed Nov. 23, 1964, Ser. No. 413,356
9 Claims. (Cl. 167—22)

1. The method of controlling microbiological organisms which comprises applying to the situs of such organisms an effective concentration of at least one levulinic acid compound selected from the group consisting of

(a) halogenated levulinic acid having the formula:

wherein R is selected from the group consisting of hydrogen, chlorine and bromine and wherein at least one occurrence and up to four occurrences of R is selected from the group consisting of bromine and chlorine;

(b) the alkali metal salt, alkaline earth metal salt, heavy metal salt, primary lower alkylamine salt and secondary lower alkylamine salt thereof;

(c) the alkyl ester containing from one to ten carbon atoms and phenyl ester thereof;

(d) the N methyl, N,N dimethyl, N ethyl and N,N diethyl amide and phenyl amide thereof.

3,275,505
PROCESS FOR PREPARING A BIOCIDAL COMPOSITION COMPRISING HALOGENATED LEVULINIC ACID

Robert J. Herschler, Camas, Wash., assignor to Crown Zellerbach Corporation, San Francisco, Calif., a corporation of Nevada

No Drawing. Filed Nov. 23, 1964, Ser. No. 413,357
6 Claims. (Cl. 167—22)

1. A process for preparing a biocidal composition having a broad spectrum of activity for controlling microorganisms comprising, hydrolyzing an hexose-yielding material by contacting said material with a water solution of an acid catalyst, separating the insoluble solids from the liquor thus formed, separating the catalyst from said liquor, stripping the readily volatile constituents from said liquor and removing a portion of the water from said liquor without removing a major portion of the high boiling soluble constituents, to isolate a concentrated product containing, predominately, levulinic acid and a minor amount of lactones and other low-volatile, soluble compounds, and halogenating said product with a halogen from the group consisting of bromine and chlorine to produce the biocidal composition.

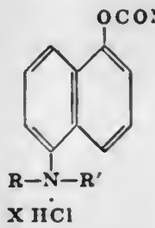
3,275,506
MICROBIOCIDAL COMPOSITIONS

Karoly Szabo, Yonkers, and Silvio L. Giolito, Whitestone, N.Y., and Thomas B. Williamson, Santa Clara, Calif., assignors to Stauffer Chemical Company, New York, N.Y., a corporation of Delaware

No Drawing. Original application June 8, 1961, Ser. No. 116,278. Divided and this application May 14, 1965, Ser. No. 462,469
5 Claims. (Cl. 167—22)

1. The method of inhibiting the growth of bacteria and fungi which comprises applying thereto a small but effective amount of chlorinated lower alkylalkanethiolsulfonate of the following formula:

$$R_1—SO_2—S—R$$



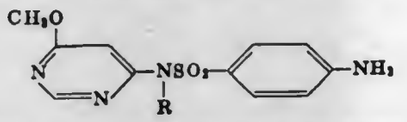
wherein R represents monochlorinated lower alkyl of from 2 to 4 carbon atoms and R_1 represents lower alkyl of from 1 to 2 carbon atoms.

3,275,507
AMINONAPHTHYL AND ALKYLAMINONAPHTHYL N-METHYLCARBAMATES AND INSECTICIDAL COMPOSITIONS THEREOF

John R. Kilsheimer, South Charleston, W. Va., and Herbert H. Moorefield, Raleigh, N.C., assignors to Union Carbide Corporation, a corporation of New York

No Drawing. Original application Dec. 30, 1960, Ser. No. 79,522, now Patent No. 3,236,877, dated June 9, 1964. Divided and this application Oct. 7, 1965, Ser. No. 508,615
15 Claims. (Cl. 167—32)

6. The process for killing insects which comprises applying an insecticidal amount of a compound having the structural formula:



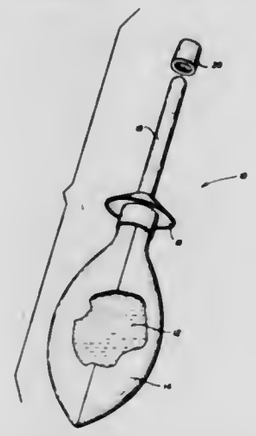
wherein X is an integer having a value of from 0 to 1, R and R′ are selected from the group consisting of hydrogen, lower alkyl and lower alkaryl radicals and R and R′ may be the same or different, to a locus to be protected.

3,275,508
METHOD FOR TREATMENT OF TOXOPLASMOSIS IN ANIMALS

Kiyoshi Tsunoda, Kodaira-shi, and Noriyuki Okuda, Tokyo-to, Japan, assignors to Daiichi Seiyaku Kabushiki Kaisha, Tokyo-to, Japan, a joint-stock company of Japan

No Drawing. Filed July 6, 1964, Ser. No. 380,634
Claims priority, application Japan, July 16, 1963, 38/38,578
8 Claims. (Cl. 167—53)

1. A method for the treatment of toxoplasmosis in animals which comprises dosing an infected animal with at least one of the compounds of the formula:



wherein R is a member selected from the group consisting of hydrogen, alkali metal, and alkaline earth metal.

3,275,509
METHOD FOR TREATING INTESTINAL DISORDERS WITH A SILICONE COMPOSITION ENEMA

Robert L. Rowan and Yetta Rowan, both of 141 E. 33rd St., New York, N.Y.

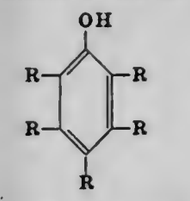
Filed Apr. 24, 1963, Ser. No. 275,369
4 Claims. (Cl. 167—56)

1. A method of treating intestinal disorders of the lower intestinal tract, which comprises the step of introducing a nontoxic organopolysiloxane liquid into the lower intestinal tract, via the rectum, thereby coating the walls of said lower intestinal tract with said liquid, said organopolysiloxane liquid having a viscosity within the range of 350 to 1000 centistokes.

3,275,510
TOPICAL ANTITUSSIVE PREPARATIONS

Louis Magid, Clifton, Paul Edward Sleezer, Mountain Lakes, and Paul Lowell Stefko, Clifton, N.J., assignors to Hoffmann-La Roche Inc., Nutley, N.J., a corporation of New Jersey

No Drawing. Filed Jan. 8, 1962, Ser. No. 164,970
15 Claims. (Cl. 167—58)



1. A process for reducing the incidence of coughs which comprises applying topically, to a subject requiring antitussive therapy, a preparation comprising a mixture of (1) an orally active antitussive agent selected from the group consisting of codeine, dihydrocodeinone, l-α-2-methyl-8-methoxy-6,7-methylenedioxy-1-(6,7-dimethoxy-3-phthalidyl)-1,2,3,4-tetrahydroisoquinoline, α-(dimethylaminoethyl)-o-chlorobenzhydrol, d-3-methoxy-N-methylmorphinan and medicinally acceptable acid addition salts thereof and (2) a lipophilic carrier.

3,275,511
COMBINED ANTIBIOTIC AND MYCOCIDE

Charles G. Shaw, deceased, late of Omemee, Ontario, Canada, by Walter Brackley Shaw, Marion Shaw, and Christina Isobell Connell, administrators, all of Omemee, Ontario, Canada, assignors, by mesne assignments, to Walter Brackley Shaw, Omemee, Ontario, Canada

Original application Aug. 23, 1957, Ser. No. 680,022. Divided and this application Mar. 22, 1966, Ser. No. 536,952
14 Claims. (Cl. 167—58)

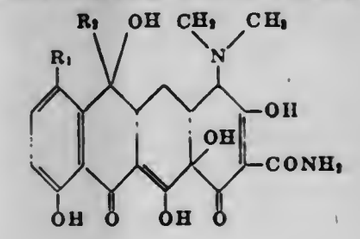
1. A method of medical treatment comprising topically applying to tissue a complex of an antibiotic selected from the group consisting of Streptomycin, di-hydro Streptomycin, Neomycin, tetracycline, oxytetracycline, chlortetracycline, and a basic salt of penicillin complexed with a halogenated phenol having the formula:

wherein R is selected from the group consisting of hydrogen, halogen and hydroxy and wherein at least one R radical is always halogen.

3,275,512
PROCESS FOR TREATING INFLAMMATION WITH BIPHENYLCARBAMATES

Alan J. Lemin, Richland Township, Kalamazoo County, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Continuation of application Ser. No. 166,358, Jan. 15, 1962. This application Nov. 27, 1962, Ser. No. 240,417
2 Claims. (Cl. 167—65)



1. A process for the treatment of inflammation comprising the administration of 4-phenylphenyl methylcarbamate in association with a pharmaceutical carrier to and animal subject having inflammation of from about 3 mg. to about 45 mg. of 4-phenylphenyl methylcarbamate per kilogram of body weight of said subject.

3,275,513
STABLE CALCIUM TETRACYCLINE COMPOSITIONS

Robert Arnold Nash, Spring Valley, and Joseph Francis Weidenheimer, New City, N.Y., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine

No Drawing. Filed May 29, 1963, Ser. No. 283,973
12 Claims. (Cl. 167—65)

1. A preconstituted clear, physically and chemically stable, essentially neutral solution consisting of a tetracycline antibiotic represented by the general formula:

wherein R_1 is selected from the group consisting of hydrogen and chlorine and R_2 is selected from the group consisting of hydrogen and methyl, comprising from about 5 to about 125 mg. per ml. of the tetracycline antibiotic, substantially two molar equivalents of a physiologically acceptable soluble calcium salt per mole of antibiotic, about 15 to 25 percent w./v. of urea, in a physiologically acceptable polyhydric alcohol vehicle, at a substantially neutral p.H.

3,275,514

PROCESS FOR INTRODUCTION OF METALS INTO THE MAMMALIAN SYSTEM

Paul D. Saltman, 416 S. Michigan Ave., Pasadena, Calif., and Philip J. Charley, 1365 Ardenes Drive, Glendale, Calif.

Filed Apr. 12, 1960, Ser. No. 21,684
6 Claims. (Cl. 167—68)

1. A method for introducing a metal into the mammalian body, which comprises the administration of a complex consisting essentially of a reducing sugar and iron, said complex being prepared by reacting in aqueous solution said sugar and iron ions, the molor ratio of said sugar to said iron ions in the solution being at least 2:1, said complex being soluble and stable in aqueous media.

5. A method for introducing a metal into the mammalian body, which comprises the administration of a complex consisting essentially of a reducing sugar and calcium, said complex being prepared by reaction in aqueous solution said sugar and a soluble acid salt of calcium, the molar ratio of said sugar to said calcium in the solution being at least 2:1, said complex being soluble and stable in aqueous media.

3,275,515

PURIFICATION OF FAT MOBILIZING SUBSTANCES

Jan Willem de Vries, Oss, Netherlands, assignor to Organon Inc., West Orange, N.J., a corporation of New Jersey

Filed Sept. 3, 1963, Ser. No. 306,130
Claims priority, application Netherlands, Sept. 21, 1962, 283,518
2 Claims. (Cl. 167—74)

1. In the method for the preparation of injectable pituitary extract fractions having fat mobilizing activity and which are substantially free from pressor activity, and including the steps of extracting pituitary glands in an aqueous medium, separating inactive solid material from the resulting extract by pH adjustment, and precipitating a crude pituitary concentate containing active fat mobilizing substances by means of ethanol, the improvement which comprises chromatographing said concentrate over a diethylaminoethyl ether derivative or cross-linked dextran gel, and separating the fat mobilizing substances present from substances having pressor activity by fractionated elution with a buffer selected from the group consisting of sodium acetate-acetic acid, ammonium acetate-acetic acid, pyridine-acetic acid, trimethylamine-acetic acid, and triethylamine-acetic acid, and recovering the fractions having fat mobilizing properties with no substantial pressor activity.

3,275,516

PITUITARY GLAND EXTRACT AND PROCESS FOR ITS MANUFACTURE

Samuel H. Eppstein, Charleston Township, Kalamazoo County, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Filed Apr. 27, 1964, Ser. No. 362,938
2 Claims. (Cl. 167—74)

2. A process of preparing a manufacture from porcine pituitary glands comprising:

(1) mixing about equal volumes of a lower alkanol containing 1 to 3 carbon atoms, inclusive. and an aqueous solution of porcine pituitary gland crop sac principle at a pH of about 7 and a temperature below about 7° to precipitate said principle,

(2) dialyzing said precipitated principle against water at a temperature of from about 0° to about 20° C.,

(3) drying the dialyzed principle at a temperature below about 30° C.,

(4) preparing an aqueous solution of the dry principle and applying said solution to a column of cross-linked dextran gel having a water regain value of from about 7.5 to about 10 gms. per gm. of dry weight,

(5) eluting the column with an aqueous sodium bicarbonate solution, combining fractional eluates having pigeon crop sac activity and absorption of ultraviolet light of wave length about 280 mμ, removing salts therefrom, and concentrating the salt-free eluates to a dry powder,

(6) preparing a solution of the dry powder in an aqueous tris (hydroxymethyl)aminomethane buffer of ionic strength 0.1 and pH 8.2 and applying said solution to a column of diethylaminoethylcellulose,

(7) eluting the column with tris(hydroxymethyl)aminomethane buffer of pH 8.2 to establish a continuous linear gradient to ionic strength 0.5 and collecting fractional eluates therefrom,

(8) combining fractional eluates having pigeon crop sac activity and absorption of ultraviolet light of wave length about 280 mμ, removing salts and volatile material therefrom, and freeze-drying the salt-free eluates.

3,275,517

ANTI-TUMOR N-NITROSOMORPHOLINE

Jean Bradley Harrison, Niagara Falls, N.Y., and Howard E. Hoffman, Wilmington, Del., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Oct. 7, 1964, Ser. No. 402,320
1 Claim. (Cl. 167—78)

A method of inhibiting tumor growth in an animal comprising administering to said animal from about 0.1 to about 75 milligrams of N-nitrosomorpholine per kilogram of body weight of the recipient.

3,275,518

TABLET COATING

Clarence J. Endicott, Winthrop Harbor, and William T. Martin, Waukegan, Ill., assignors to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois

No Drawing. Filed Apr. 18, 1963, Ser. No. 273,817
4 Claims. (Cl. 167—82)

1. A method of coating tablets suitable for oral administration which comprises applying to a tablet a therapeutically acceptable coating composition which readily disintegrates in simulated gastric and intestinal fluids consisting essentially of

(a) a film-forming material selected from the group consisting of poly(methylstyrene), methylstyrene-acrylonitrile copolymers, vinyl butyral, poly(vinylchloride), pentaerythritol and alkyd esters of rosin, pentaerythritol esters of modified rosins and terpene-based alkyd resins, and

(b) a compound selected from the group consisting of glyceryl monostearate, diglycol stearate and a poly(ethylene glycol) having a melting point of at least 45° C.

3,275,519

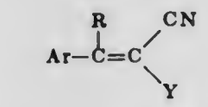
PERORAL PELLET AND THE METHOD OF MAKING SAME

Jacob A. Glassman, 1680 Meridian Ave., Miami Beach, Fla.

Filed Oct. 1, 1965, Ser. No. 492,227
14 Claims. (Cl. 167—82)

1. The method of making a therapeutic pellet having an inner therapeutic portion and an outer therapeutic portion, and a layer of gelatin arranged between said portions comprising the successive treating of said gelatin layer with formalin and absolute alcohol to render it resistant to the acid environment of the stomach.

3,275,520



METHODS FOR PROTECTING THE SKIN AGAINST ACTINIC RADIATIONS

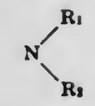
Albert F. Strobel, Delmar, and Sigmund C. Catino, Castleton, N.Y., and Marvin R. Leibowitz, Edison, N.J., assignors to General Aniline & Film Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed May 29, 1962, Ser. No. 198,448
10 Claims. (Cl. 167—90)

1. In a method for protecting skin against actinic radiations, the improvement which comprises applying to the skin a composition comprising

(I) a compound having the formula

wherein



(1) R is a radical selected from the group consisting of hydrogen, alkyl, aryl, alkenyl and hetero;

(2) Y is selected from the group consisting of CN and

wherein:

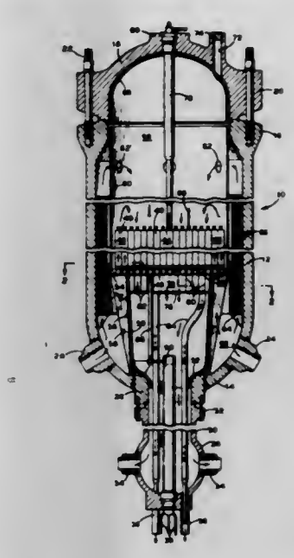
X is selected from the group consisting of OR_3 and

R_1, R_2 and R_3 are independently any R radical; and

(3) Ar is a radical selected from the group consisting of aromatic carbocyclic nuclei and heterocyclic nuclei having at least one pair of conjugated double bonds, and

(II) a dermatologically acceptable carrier;

(III) said compound I being devoid of nitro groups and aromatic nuclear substituted amino groups.



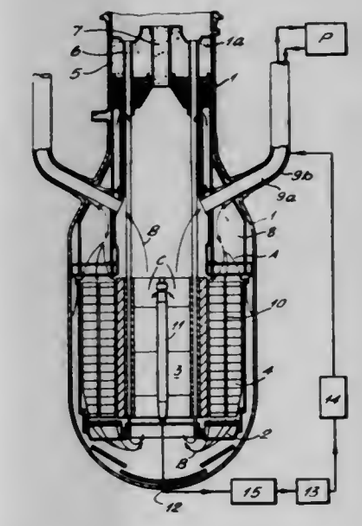
3,275,521

FAST BREEDER REACTOR ARRANGEMENT

Donald C. Schluderberg and Gordon R. Winders, Lynchburg, Va., assignors to The Babcock & Wilcox Company, New York, N.Y., a corporation of New Jersey

Filed Nov. 15, 1963, Ser. No. 324,008
16 Claims. (Cl. 176—18)

1. A nuclear reactor comprising a pressure vessel having a plurality of fuel elements arranged as a core therein to undergo a fission-type chain reaction and having an operating neutron spectrum energy level substantially above the thermal neutron level, a plurality of elements containing fertile material arranged as a blanket surrounding said core, and means for passing a coolant fluid serially upward through the blanket elements laterally surrounding said core and then downwardly through said core elements.

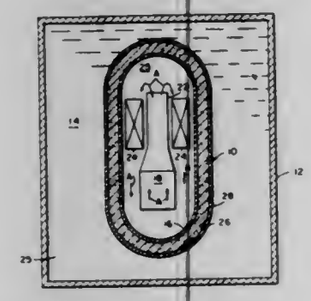


3,275,522

HIGH TEMPERATURE GAS COOLED REACTORS WITH INTERNAL FISSION BY-PRODUCT TRAPPING MEANS

Denis Victor Kinsey, Weymouth, Dorset, and Leon Jean Valette, Poole, Dorset, England, and Johan Lothe, Oslo, Norway, assignors to United Kingdom Atomic Energy Authority, London, England

Filed Mar. 26, 1963, Ser. No. 268,038
Claims priority, application Great Britain, Mar. 28, 1962, 11,842/62
5 Claims. (Cl. 176—37)



1. A graphite fuel bearing component for a high temperature gas cooled nuclear reactor having a fuel bearing region, means defining therein a channel for gaseous coolant, said channel having an inlet portion, an intermediate portion extending adjacent the fuel bearing region, and an outlet portion, said component being susceptible to corrosion by impurities in said gas stream, trapping means supported in said inlet portion, said trapping means comprising a porous body of graphite having at least one material incorporated therein to make said body reactive with respect to said impurities.

3,275,523
NUCLEAR REACTOR WET THERMAL INSULATION

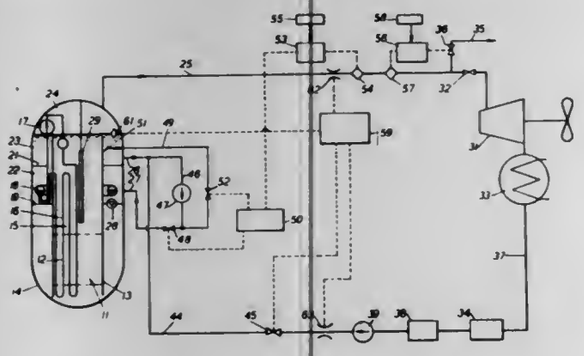
Thomas MacKenzie Campbell, Jr., and Wallace Markert, Jr., Alliance, Ohio, assignors, by mesne assignments, to the United States of America as represented by the United States Atomic Energy Commission

Filed Apr. 30, 1965, Ser. No. 452,419
3 Claims. (Cl. 176—44)

1. A wet containment for a nuclear fission reactor comprising:

(a) a nuclear reactor enclosed in a vessel immersed within a containment vessel filled with liquid coolant;

(b) a jacket surounding and spaced from said reactor vessel;



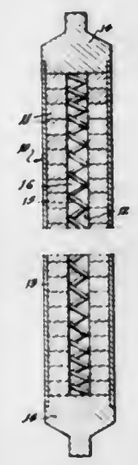
(c) a fine particulate of non-reactive, relatively poor thermally conductive material filling the space between said reactor vessel and said jacket, said particulate being saturated with said liquid coolant;

(d) and baffle means situated within said space and spaced from both of said reactor vessel and jacket to prevent the circulation of liquid coolant with said space between said pressure vessel and said jacket.

3,275,524
BOILING COOLANT REACTOR WITH IMPROVED RECIRCULATION AND BY-PASS CONTROL ARRANGEMENT

Ronald Peter Williams, Warrington, England, assignor to United Kingdom Atomic Energy Authority, London, England

Filed Dec. 26, 1963, Ser. No. 333,400
Claims priority, application Great Britain Jan. 8, 1963, 830/63
5 Claims. (Cl. 176—56)



1. In a boiling coolant nuclear reactor having a nuclear core with a coolant inlet, a chamber to receive boiling coolant from the core, and a recirculation line including a circulator and connecting the boiling coolant chamber to the core coolant inlet for forced recirculation of liquid coolant from the chamber back to the core, the improvement, for varying the recirculation, comprising a by-pass line directly connecting the recirculation line at a point downstream of the circulator to the boiling coolant chamber for passing recirculating coolant from the recirculation line to the boiling coolant chamber, and means to vary controllably the flow rate in the by-pass line.

3,275,525
NUCLEAR FUEL ELEMENT INCORPORATING HELICAL FISSIONABLE WIRE

Clarence H. Bloomster and Joseph J. Hauth, Richland, Wash., assignors to the United States of America as represented by the United States Atomic Energy Commission

Filed July 20, 1965, Ser. No. 473,538
6 Claims. (Cl. 176—73)

1. A nuclear-fuel element comprising a long mass of ceramic fuel containing a relatively low amount of a material fissionable by neutrons of thermal energy and a varying helical wire of a metallic fuel containing a relatively high amount of a material fissionable by neutrons of thermal energy extending axially of the mass, wherein the varying helical wire is a helical wire of pitch varying from a maximum at a mid region to a minimum at the ends of the wire.

2. A nuclear-fuel element comprising a long mass of ceramic fuel containing a relatively low amount of a material fissionable by neutrons of thermal energy and a varying helical wire of metallic fuel containing a relatively high amount of a material fissionable by neutrons of thermal energy extending axially of the mass, wherein the varying helical wire is a helical wire of a diameter of helix varying from a minimum at a mid region in the length of the wire to a maximum at the ends of the wire.

3,275,526
METHOD FOR PRODUCING OROTIDINE

Teruo Shiro, Shimpachi Konishi, and Shinji Okumura, Kanagawa-ken, and Masahiro Takahashi, Tokyo, Japan, assignors to Ajinomoto Co., Inc., Tokyo, Japan

No Drawing. Filed Nov. 19, 1963, Ser. No. 324,823
Claims priority, application Japan, Nov. 20, 1962, 37/50,859
4 Claims. (Cl. 195—28)

1. A method of producing orotidine which comprises aerobically culturing at least one auxotroph of *Bacillus subtilis* which requires a nutrient including at least one of the group consisting of uracil, uridine and uridylic acid for growth, in an aqueous culture medium including a source of assimilable carbon, a source of assimilable nitrogen, inorganic salts, an organic growth promoting agent, and 5 mg./dl. to 15 mg./dl. of said nutrient required by said auxotroph at a temperature substantially between 27° C. and 37° C. and at a pH value of between 5.0 and 8.0 until orotidine is accumulated in said medium, and recovering said orotidine.

3,275,527
METHOD OF DETERMINATION OF THE CONTENT OF MICROORGANISMS IN AIR

Karl Heinrich Maier and Knut Voggel, Gottingen, Germany, assignors to Fa. Membranfilter-Gesellschaft G.m.b.H., Gottingen, Germany, a corporation of Germany

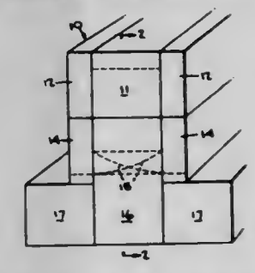
No Drawing. Filed Jan. 28, 1963, Ser. No. 254,423
8 Claims. (Cl. 195—103.5)

1. In a process for the determination of the microorganism content of air by means of air-permeable membranes, the steps of passing air containing microorganisms through a microporous air-premeable membrane having a base consisting essentially of a water-soluble substance selected from the group consisting of gelatine, polyvinyl alcohol and methyl cellulose and each membrane having pores with an average diameter of about 2 microns, a pore density of about 10^7 pores per $cm.^2$, the entire volume of the pores ranging from 80–85% of the volume of the membrane and the air permeability of the membrane ranging from 10 to 400 liters per 100 $cm.^2$ per minute under a 500 mm. column of water, to accumulate microorganisms on the membrane, and forming cultures from the microorganisms accumulated on the membrane.

3,275,528
METHOD AND APPARATUS FOR CONTROLLING CULTURE GROWTH

Herman Ainis, Denver, Colo., assignor to California Institute Research Foundation, Pasadena, Calif., a corporation of California

Filed Mar. 30, 1961, Ser. No. 99,463
2 Claims. (Cl. 195—104)



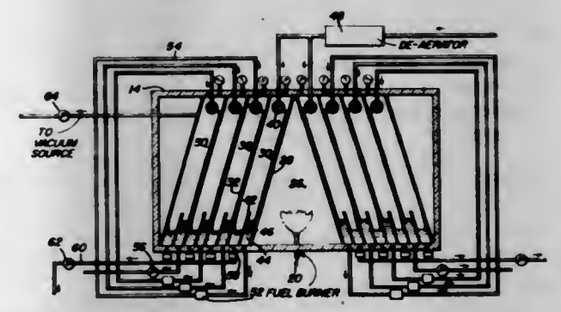
1. An apparatus for controlling culture growth comprising a housing including a gas chamber, a first fluid chamber positioned adjacent to said gas chamber, a second fluid chamber positioned adjacent to said first fluid chamber, means for circulating gas in and through said gas chamber, means for circulating fluid in and through said first fluid chamber, means for circulating fluid through said second fluid chamber, a first porous means positioned in said first fluid chamber and separating said gas chamber from said first fluid chamber, said first porous means having a pore size sufficient to pass molecules having a size on the order of that of insulin but insufficient to pass cells, and a second porous means positioned in said second fluid chamber and separating said second fluid chamber from said first fluid chamber, said porous means having a pore size sufficient to pass molecules having a size on the order of urea, but insufficient to pass molecules having a size on the order of insulin.

2. A method of controlling tissue growth in an apparatus having a gas chamber, a first fluid chamber and a second fluid chamber, said first fluid chamber being provided with a porous means separating said gas chamber from said first fluid chamber and having a pore size sufficient to pass molecules having a size on the order of insulin, but insufficient to pass cells, said second fluid chamber being provided with a porous means separating said first fluid chamber from said second fluid chamber and having a pore size sufficient to pass molecules having a size on the order of urea, but insufficient to pass molecules having a size on the order of insulin, comprising the steps of placing explanted cells in said first fluid chamber, subjecting said cells to a gaseous atmosphere compatible therewith, slowly passing a nutrient medium through said first fluid chamber and bathing said cells with said medium, slowly passing a like medium through said second fluid chamber whereby by-products having a size sufficiently small to pass through said second porous means are removed from said first fluid chamber, and collecting medium passed through said first fluid chamber whereby cell by-products having a size too large to pass through said second porous means are obtained.

3,275,529
FALLING FILM STILL HAVING CONVEX FILM FEEDING SPILLWAYS

Edward Charles Kehoe and Elwood C. Walker, North Caldwell, N.J., assignors, by mesne assignments, to Saline Water Conversion Corporation, a corporation of New York

Filed Dec. 28, 1962, Ser. No. 248,140
7 Claims. (Cl. 202—172)

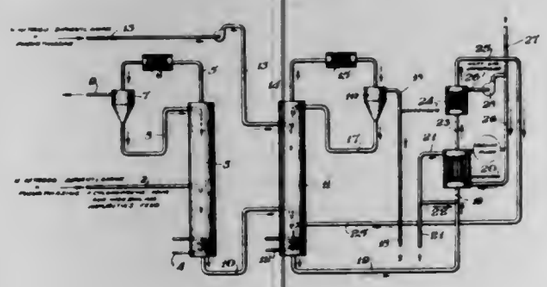


1. In a system of the class described, a housing, vapor diffusion means in said housing including opposed film plates forming a vertical channel therebetween, gently curved convex surfaces defining spillways at the upper end thereof merging flush with the plates, means supplying liquid to be vaporized to said housing to a level relatively to said spillways for delivery therealong and to said plates in thin film disposition, means at the lower end of said channel merging flush with said plates and diverging relatively to one another to lead the films on said plates to collection means offset from said channel, vapor collection means positioned below said channel and between said film collection means, condenser means, and means conducting the vapor from said collection means to said condenser.

3,275,530
MULTI-STAGE WATER DISTILLING APPARATUS

John N. Akers, Box 148, Columbia Theological Seminary, Decatur, Ga.

Filed Oct. 31, 1963, Ser. No. 320,407
2 Claims. (Cl. 202—174)



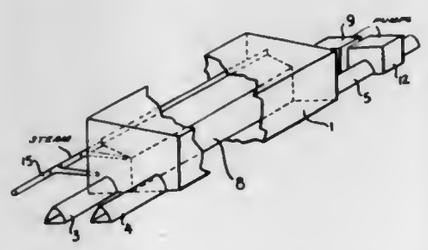
1. Apparatus for the distillation and recovery of potable distillate from saline water with comprises, a plurality of pressure sealed chambers disposed adjacent one another and in heat exchange relationship with each other, each of said chambers comprising an inverted V-shaped central heating chamber having a group of closely spaced parallel plates which are vertically inclined and arranged on opposite sides of a vertical axis extending centrally through said heating chamber, the groups of plates being oppositely inclined and wherein each plate is extended to the top and bottom walls of the chamber forming a plurality of evaporator-condenser compartments, a fuel burner disposed in the bottom of said central heating chamber, said heating chamber comprising a pair of oppositely inclined inner plates which form the side walls of said central chamber and which plates are directly heated by said burner, said plates of each compartment providing a heated evaporative plate surface facing towards said burner with a co-acting side surface on the next adjacent plate forming a condensing surface for con-

densate within each compartment, a de-aerator connected to an inlet conduit for conducting saline water into said evaporator-condenser compartments, said de-aerator being connected to a branched-pair of conduits for introducing saline water concurrently into the top of the compartments which include said oppositely inclined inner plates, nozzle means disposed on the discharge ends of each of said pair of conduits for effecting film-flow of saline water downwardly over the sloping surface of said inner plates while the same are heated by said burner, each of said compartments comprising a partition extending from the bottom of the compartment for a short length and dividing said compartment into two sub-compartments, one of said sub-compartments forming a collection trough for said saline water and the other a trough for collecting said condensate, means comprising a saline-conveying conduit connected to each of said saline collection troughs for introducing saline water progressively from one compartment into the top of the next succeeding evaporator-condenser compartment of the respective groups for supplying saline water thereto and film-flowing the same downwardly over the plates in succession, adjustable flow control valves connected to each of said saline-conveying conduits, pump means connected to the end compartment of each of said groups for conveying away unevaporated saline water, means comprising a condensate-withdrawing conduit for withdrawing condensate from each of said condensate collecting troughs, adjustable flow control valves connected to each of said condensate-withdrawing conduits, said adjustable flow valves in said saline-conveying conduits and said condensate-withdrawing conduits being connected in parallel and respectively adjusted so that a constant level of condensate and saline water respectively is maintained in said evaporator-condenser compartments, and vacuum pump means connected to the end compartment of one of said groups for maintaining subsatmospheric pressures in said compartments.

3,275,531
PURIFICATION OF CHLOROPRENE BY PLURAL STAGE DISTILLATION AND THE ADDITION OF POLYMERIZATION INHIBITORS

Kurt Sennewald and Wilhelm Vogt, Knapsack, near Cologne, and Hans Weiden, Rodenkirchen, near Cologne, Germany, assignors to Knapsack-Griesheim Aktiengesellschaft, Knapsack, near Cologne, Germany, a corporation of Germany

Filed Sept. 25, 1963, Ser. No. 311,553
Claims priority, application Germany, July 28, 1960, K 41,309
4 Claims. (Cl. 203—8)



1. In the process for isolating and purifying crude chloroprene obtained by reacting monovinylacetylene with hydrogen chloride, deacidified by a water wash and containing monovinylacetylene and higher impurities such as dichlorobutene, dimeric chloroprene and methylvinyl ketone, which comprises separating in distillation stages chloroprene from said impurities and said monovinylacetylene, all separating stages being carried out in the presence of substances prohibiting polymerization, the improvement which consists essentially of withdrawing all monovinylacetylene at a temperature of 5° C. and 765 mm. Hg at the head of a first distilling stage, conducting the first stage's sump product consisting of chloroprene and higher boiling point impurities to a second distillation stage, distilling off pure chloroprene at a temperature of 60° C. and 765 mm. Hg at the head of said second stage, the temperatures and chloroprene partial pressures in the stills of the first and second distillation stages being between about 60–70° C. and between about 760 and 850 mm. Hg, respectively, conducting the second stage's sump product consisting of the higher boiling point impurities and residual chloroprene to a third distillation stage wherein the residual chloroprene is distilled off under reduced pressure below about 650 mm. Hg and reconducted into said second stage, all stages being carried out in the presence of a substance inhibiting the α-polymerization and being selected from the group consisting of hydroquinone, pyrocatechol and phenothiazine, and in the presence of N-nitrosodiphenylamine inhibiting the ω-polymerization.

3,275,532
METHOD OF RECOVERING WATER FROM SEA WATER

Ralph E. Harper, 2564 Ross Road, Silver Spring, Md.

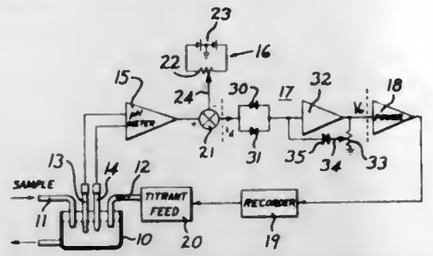
Filed Apr. 9, 1962, Ser. No. 186,208
1 Claim. (Cl. 203—11)

A method of recovering pure water from sea water which comprises the steps of introducing a quantity of sea water into a gas-tight vessel, heating said sea water to cause water to evaporate and form water vapor in the space thereabove, introducing a quantity of pure water into the vessel adjacent said quantity of sea water but separated therefrom, said pure water and said sea water having a common water vapor space thereabove, introducing an additional quantity of pure water to raise the level of said pure water and to compress the water vapor in said space causing the vapor to condense as distillate which is collected in said pure water, thereafter withdrawing the resultant pure water and lowering its level, and simultaneously introducing sea water into the vessel at the same rate as the rate of withdrawal of said distillate to maintain the pressure in the vessel substantially constant and to assist in the withdrawal step, and reducing the level of the sea water to lower the pressure and to encourage evaporation of the sea water.

3,275,533
METHOD AND APPARATUS FOR AUTOMATIC TITRATION

Attila D. Boronkay, Fullerton, Calif., assignor to Beckman Instruments, Inc., a corporation of California

Filed Nov. 19, 1962, Ser. No. 238,585
9 Claims. (Cl. 204—1)



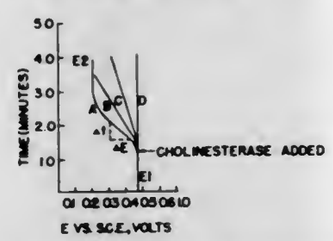
8. A method of continuous titration, including the steps of:

supplying a titration reagent;

mixing said reagent with a sample stream to form a sample-reagent mixture;

sensing the ion concentration of said mixture;

generating an electrical signal indicative of said concentration;



converting said signal into a control signal varying as the integral of an exponential thereof; and

utilizing said control signal to control the supply of titration reagent.

3,275,534
BIOELECTRIC METHOD FOR THE DETECTION OF ANTICHOLINESTER-ASES

Paul L. Cannon, Jr., Harrisburg, Pa., and David N. Kramer, Stevenson, Md., assignors to the United States of America as represented by the Secretary of the Army

Filed Mar. 19, 1963, Ser. No. 266,461
10 Claims. (Cl. 204—1)

1. A method of quantitatively detecting the presence of organophosphorus compounds which comprises:

(a) applying a low direct current across a negative and a positive electrode immersed in a stirred buffered aqueous solution of said compound and a lower alkanoyl thiocholine ester having a reference electrode therein,

(b) recording the potential between said positive electrode and said reference electrode,

(c) adding cholinesterase to said solution,

(d) recording the ratio of the change in potential between said positive electrode and said reference electrode with respect to the change in time from the addition of said cholinesterase, said ratio being inversely proportional to the concentration of said compound in said buffered solution.

3,275,535
METHOD OF PREPARING URANIUM FOR NICKEL PLATING

Jerry R. Lundquist and Robert W. Stromatt, Richland, Wash., assignors to the United States of America as represented by the United States Atomic Energy Commission

No Drawing. Filed Mar. 22, 1966, Ser. No. 538,157
3 Claims. (Cl. 204—1.5)

1. A method of preparing uranium for electro-plating which comprises anodizing the uranium in an aqueous solution which is 5 to 7 M H_2SO_4 and 0.25 to 0.40 M HCl.

3,275,536
METHOD OF FORMING A BROWN COATING ON STEEL ARTICLES

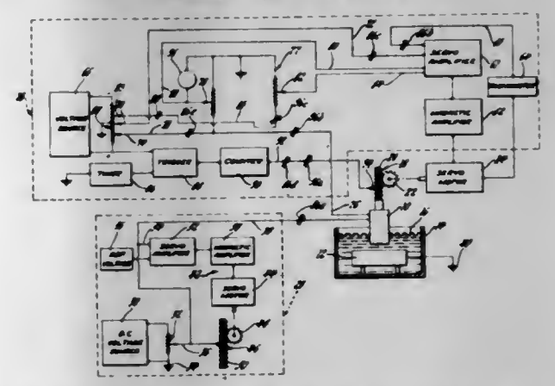
John A. McCarthy, Monroeville, Pa., assignor to United States Steel Corporation, a corporation of Delaware

No Drawing. Filed Nov. 6, 1962, Ser. No. 235,854
5 Claims. (Cl. 204—56)

1. A method of forming an adherent brown coating on steel articles comprising subjecting the articles to electrolysis as anode in a solution consisting essentially of water, from 300 to 900 grams of alkali-metal hydroxide per liter and from 10 to 250 grams per liter of a reagent selected from the group consisting of citric, gluconic, malic, mandelic, glycolic and tartaric acids and alkali-metals salts thereof, while maintaining said solution at a temperature of from 115 to 145° C.

3,275,537
PROCESS OF ANODIZING ALUMINUM

Jean Petin, Paris, France, assignor to Etablissements J. J. Carnaud & Forges de Basse-Indre, Paris, France, a corporation of the French Republic



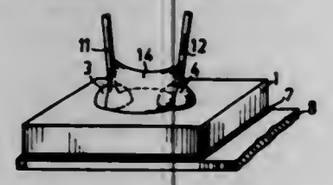
No Drawing. Filed Apr. 24, 1963, Ser. No. 275,201
Claims priority, application France, May 25, 1962, 898,751
3 Claims. (Cl. 204—58)

1. A method of anodizing aluminum comprising the step of employing the aluminum to be treated as the anode in a bath consisting essentially of an aqueous solution of a bisulfate of an alkali metal, of an organic acid selected from the group consisting of citric acid and tartaric acid, and of zinc sulfate.

3,275,538
ELECTROCHEMICAL MACHINING METHOD AND APPARATUS

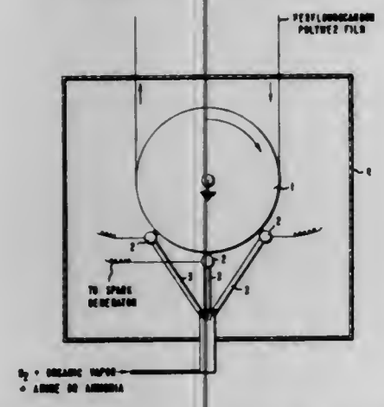
Robert H. Haupt, Roseville, Mich., and Glenn E. Wanttaja, Hales Corners, Wis., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Filed Sept. 20, 1960, Ser. No. 57,165
17 Claims. (Cl. 204—143)



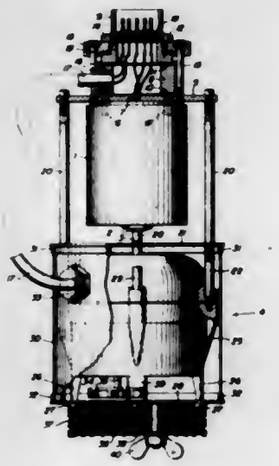
2. In electrochemical machining apparatus, the combination of conductive tool and workpiece electrodes spaced apart so as to provide a conductive medium filled gap therebetween, and a source of electrical energy applied across the gap so as to cause stock to be removed from the workpiece electrode, the source including means developing an error signal corresponding to variations in gap voltage relative to a predetermined reference and means operated by the error signal for varying the output of the source so as to cause the gap voltage to correspond to the predetermined reference regardless of gap spacing.

8. In the method of periodically adjusting the spacing of a conductive tool electrode and a conductive workpiece relative to each other during the electrochemical machining process of removing stock from the workpiece, the repetitive steps including positioning the workpiece and the electrode relative to each other so as to form a predetermined gap therebetween, applying electrical energy across the gap, moving the electrode and the workpiece towards each other so as to effect stock removal from the workpiece, interrupting the application of the electrical energy across the gap so as to stop the stock removal process after a predetermined interval, applying a voltage across the gap, moving the electrode and the workpiece relative to each other in a gap space reducing direction while sensing the gap voltage, stopping



the relative movement of the electrode and the workpiece in the gap space reducing direction when the gap voltage is of a certain value, separating the electrode and the workpiece until the predetermined gap is re-established therebetween, and recommencing the stock removal process.

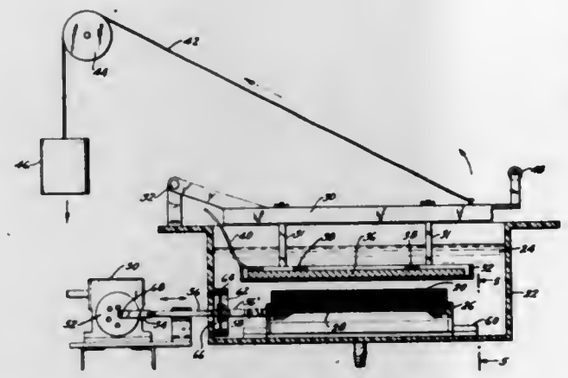
3,275,539
METHOD OF MANUFACTURING SEMICONDUCTOR DEVICES
Joseph Bernardus Marie Spaapen, Mollenhutseweg, Nijmegen, and Adrianus Cornelis Johannes Verhoeven, Eindhoven, Netherlands, assignors to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Nov. 9, 1962, Ser. No. 236,571
5 Claims. (Cl. 204—143)



1. In the manufacture of a semi-conductor device comprising a semi-conductive body having two closely-spaced adjacent electrode portions on the same surface of the body, the method of selectively removing surface portions of the body leaving intact the surface portions intervening between the electrodes, comprising the steps of connecting a current-supply lead to each of the electrodes, depositing between the current-supply leads and on at least one of the current-supply leads at a point spaced from the body a drop of flowable masking agent such that it adheres to and flows along the said at least one lead, directed by said lead, toward the body, said current-supply leads being so closely spaced that, by virtue of surface tension forces, the drop accumulates between the leads to deposit on and cover substantially only that portion of the surface of the body extending between the leads, and thereafter subjecting exposed surface portions of the body to a body-material-removing etching treatment while the masking agent remains in position protecting the body surface portions between the electrodes from contact with the etchant.

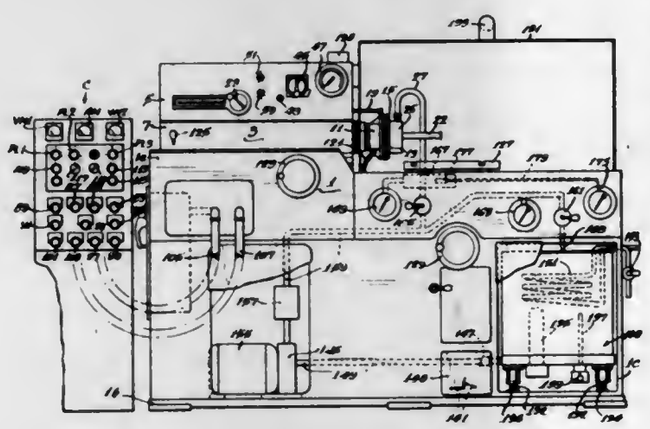
3,275,540
SURFACE TREATMENT OF SHAPED ORGANIC POLYMERIC STRUCTURES
Richard T. McBride, Buffalo, N.Y., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Oct. 1, 1963, Ser. No. 313,080
5 Claims. (Cl. 204—165)

1. A process for rendering surfaces of shaped structures of organic polymeric materials strongly adherent to other materials which comprises subjecting the surface of an organic polymeric shaped structure to the action of an electrical discharge at substantially atmospheric pressure between spaced positive and negative electrodes maintained at a voltage differential in excess of about 1000 volts, said electrical discharge having an energy level below 15 electron volts, in an atmosphere of a mixture of vapors comprising essentially the vapor of a compound selected from the group consisting of ammonia and amines wherein the amino group is the sole functional group and the vapor of an organic compound other than an amine wherein the amino group is the sole functional group of the compound, said compound having a vapor pressure of at least 0.25 mm. of mercury at 60° C., whereby to render said surface strongly adherable to other materials.



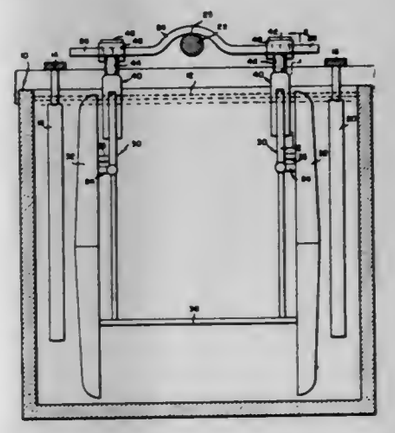
3,275,541
POLAROGRAPHIC CELL WITH MEMBRANE CLEANING MEANS
Roger K. Strong, Doylestown, Pa., assignor to Honeywell Inc., a corporation of Delaware
Filed Mar. 27, 1963, Ser. No. 268,430
1 Claim. (Cl. 204—195)

A polarographic cell structure comprising a polarographic cell having a pair of internal electrodes immersed in an electrolyte and a selectively permeable membrane separating said electrodes and said electrolyte from a liquid to be tested, a submersible pump means adapted for operation while submerged in the liquid to be tested, said pump means being attached to said cell including a motor means, a fluid impeller driven by said motor means, a pump enclosure housing said motor means and said impeller and having a fluid inlet and outlet, said outlet being positioned in spaced relation from but closely adjacent to the outside surface of the membrane, the outlet being positioned also in substantial axial alignment with said membrane to direct a stream of pumped test liquid against an outside surface of said membrane, and fluid tight connecting means operative to provide electric connections from associated equipment to said cell and said pump means.



3,275,542
APPARATUS FOR ELECTROPLATING LEADS OF SMALL ELECTRONIC COMPONENTS
Philip L. Couture, Worcester, Mass., assignor to General Instrument Corporation, Newark, N.J., a corporation of New Jersey
Filed Oct. 26, 1962, Ser. No. 233,301
2 Claims. (Cl. 204—222)

1. Apparatus for electroplating the leads of small electronic components, said apparatus comprising a tank for an electrolyte, a reciprocable carrier in said tank, stationary ways for slidably supporting and guiding said carrier for horizontal reciprocation, a relatively flat open-topped conductive basket made of metal mesh detachably received by said carrier and dimensioned to receive a very large number of said components, said ways and said carrier being made of a smooth corrosion-resistant plastics material and said carrier having one or more conductive strips engaging the basket for electrical contact, a pivoted anode carrier over said tank, an anode carried

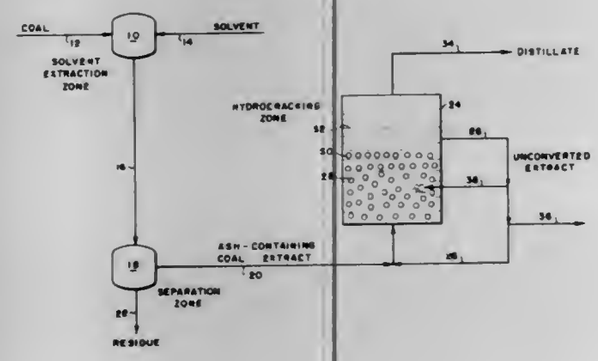


by said carrier and immersed in the electrolyte over the basket, counterbalance means to facilitate raising or lowering of the carrier to remove the anode and to expose the basket for ready removal and replacement, current supply leads extending to said anode and to the conductive strips of the carrier for electrical connection through the basket to the components therein, and motive means to reciprocate the carrier and basket.

3,275,543
ELECTROLYTIC CAVITY SINKING APPARATUS
Lynn A. Williams, Winnetka, Ill., assignor to Anocut Engineering Company, Chicago, Ill., a corporation of Illinois
Filed Sept. 2, 1960, Ser. No. 73,154
2 Claims. (Cl. 204—224)

1. Apparatus for electrolytically forming a cavity in an electrically conductive and electrochemically erodible workpiece, comprising in combination, means mounting the workpiece, a hollow electrode, means mounting said electrode, means for relatively moving said workpiece mounting means and said electrode mounting means toward each other at a constant rate, an electrolyte supply tank, conduit means connecting said electrolyte tank to said electrode, an electrolyte pump in said conduit means for the delivery of electrolyte under pressure to the gap between the workpiece and said electrode, valve means in said conduit means for controlling the pressure of the electrolyte, separate heating and cooling means in said electrolyte tank for maintaining the temperature of the electrolyte at a desired level above the ambient temperature, and means connected to the workpiece and said electrode for passing a low voltage direct current between the workpiece and said electrode in a sense to make the workpiece anodic.

3,275,544
QUICK CHANGE PLATING BATH FIXTURE
John C. Gade, Warren, Ohio, assignor to Rockwell-Standard Corporation, a corporation of Delaware
Filed Apr. 13, 1962, Ser. No. 187,291
2 Claims. (Cl. 204—297)



1. In an electrolytic apparatus of the type characterized by a plating tank having at least two laterally spaced parallel electrical conductor bars extending along the top of the tank with electrodes depending from said conductor bars into the electrolyte in said tank and an intermediate current carrying bar, a laterally extending current carrying cross bar slidably connected to said intermediate current carrying bar and extending toward said conductor bars, brackets slidably mounted on the opposite ends of said cross bar for displacement in the direction of the electrodes, each said bracket having a downwardly tapered non-circular open through socket provided with a restricted side opening, a hanger unit readily removably mounted on said bracket comprising a shank of such lateral dimensions as to fit laterally through said socket side opening, an enlarged tapered non-circular head of the same shape as the socket seated within said socket with a non-rotatable wedge fit and means below said shank rigidly mounting a work holding rack suspended in the electrolyte in suitable spaced relation to an electrode.

3,275,545
HYDROFINING OF MICROCRYSTALLINE WAX
Patrick P. McCall, New Monmouth, N.J., assignor to Esso Research and Engineering Company, a corporation of Delaware
Filed Apr. 16, 1963, Ser. No. 273,434
6 Claims. (Cl. 208—27)

1. A method of refining a raw microcrystalline wax so that is has at least a 12 TR color characteristic which comprises combining the said raw microcrystalline wax with a stream of hydrofined microcrystalline wax in such proportions that the concentration of 2 and 3 condensed ring aromatics in the combined wax is a maximum of

about 4% by weight, catalytically hydrofining the said combined wax feed containing a maximum of about 4% of 2 and 3 condensed ring aromatics, dividing the hydrofined wax in two portions, recycling one portion of said hydrofined microwax into a stream of the said raw microwax in such proportion that the said combined stream contains a maximum of about 4% by weight of 2 to 3 condensed ring aromatics, and recovering the said remaining portion of hydrofined microwax as product.

3,275,546
METHOD OF ATTRITING SOLIDS IN A HYDROCRACKING PROCESS
William B. Retallick, Canonsburg, Pa., assignor to Consolidation Coal Company, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Dec. 28, 1962, Ser. No. 247,963
1 Claim. (Cl. 208—108)

The process for catalytically hydrocracking ash-containing coal extract which comprises

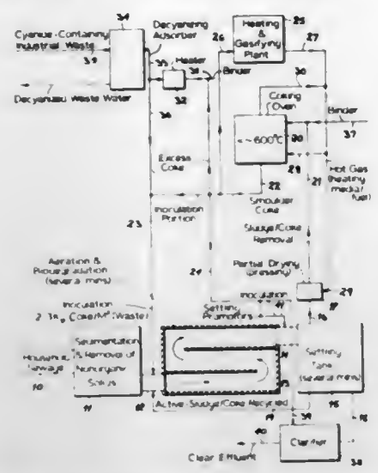
(a) establishing and maintaining a bed of catalyst in a catalytic hydrocracking zone,

(b) introducing ash-containing coal extract in a liquid state into the hydrocracking zone,

(c) maintaining the flow of liquid through the bed of catalyst under hydrocracking conditions at a velocity between 0.01 and 1 foot per second to maintain the catalyst as a liquid-phase, dense fluidized bed, whereby a portion of the ash-containing extract is converted to distillate products and at least a portion of the ash in the extract is deposited upon the catalyst, and

(d) recycling at least a portion of the unconverted coal extract in the liquid state into a local region of the liquid-phase, dense fluidized bed at a velocity between 5 and 50 feet per second, whereby a zone of relatively high turbulence is created in a portion of the bed wherein the ash-laden catalyst is attrited and thereby reactivated.

3,275,547
METHOD OF TREATING SEWAGE
Wilhelm Bucksteeg, Moorenstrasse 35, and Hans Thiele, Weserstrasse 75, both of Essen, Germany
Filed July 20, 1964, Ser. No. 383,748
1 Claim. (Cl. 210—5)



A method of treating raw sewage consisting at least in part of decomposable organic household waste, comprising the steps of:

(a) settling a sewage sludge from said raw sewage;

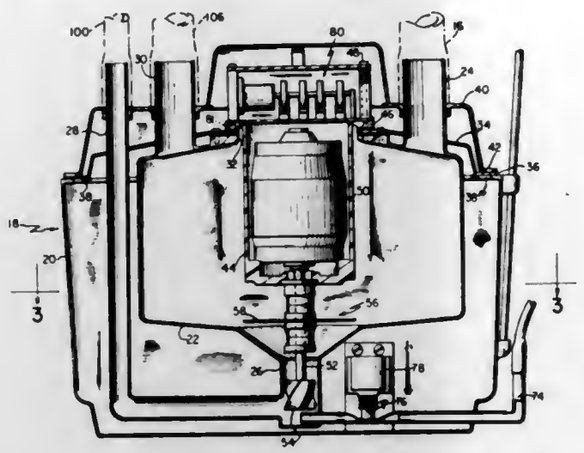
(b) cokefying said sludge by removing water therefrom and heating it in the absence of air at a temperature upwards of about 600° C. to produce an at least partially carbonized sludge smolder coke;

(c) agitating further quantities of said raw sewage prior to the settling of sludge therefrom;

(d) returning only a fraction of the smolder coke produced in step (b) to the raw sewage;

(e) thereafter settling sludge containing said coke from the agitated raw sewage for cokefication thereof.

3,275,548
REMOVAL OF DISSOLVED SUBSTANCES FROM AQUEOUS DISPERSIONS
Harold A. Walters, Beaverton, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Filed Aug. 14, 1963, Ser. No. 302,009
5 Claims. (Cl. 210—24)



1. A method of separating dispersed organic material having a molecular dimension of less than about 300 Angstroms from an aqueous dispersion comprising contacting the aqueous dispersion with a finely divided adsorbent comprising a plurailty of synthetic resinous sphere-like particles, the synthetic resinous particles having a plurality of pores communicating with the surface thereof and the pores having diameters ranging up to about 300 Angstroms the synthetic resinous particles being prepared by the copolymerization of 5 mole percent divinylbenzene with 95 mole percent styrene in the presence of a solvent equal to twice the total volume of the divinylbenzene and styrene, the solvent being a mixture of 50 parts of toluene and 50 parts of octane, to form a rigid cross-linked solid and subsequently separating the resinous particles from the aqueous dispersion.

3,275,549
DESICCANT REGENERATION
Clarence R. Crabb, Lake Jackson, and Leighton S. McDonald, Angleton, Tex., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Filed July 31, 1963, Ser. No. 299,106
4 Claims. (Cl. 210—30)

1. A method for the removal of sorbed water from a cation-exchange resin which comprises contacting said resin with a halogenated hydrocarbon capable of forming an azeotrope with water, said azeotrope having a boiling point of from about 50° to 165° C., and maintaining said halogenated hydrocarbon-resin mixture at a temperature sufficiently high to effect distillation of said azeotrope.

3,275,550
METHOD AND APPARATUS FOR TREATING TOILET WASTE
Benjamin K. Daubenspeck, Stratford, Conn., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Filed June 28, 1963, Ser. No. 291,555
14 Claims. (Cl. 210—60)

11. A method of treating waste deposited in marine toilets and the like comprising the steps of pumping a mixture of waste and water from the toilet to a chamber having a discharge pipe connected thereto, introducing a predetermined quantity of waste treating material to the chamber, pumping any material in said discharge pipe back into said chamber, agitating the contents of said

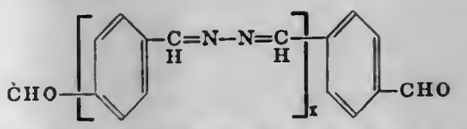
chamber, allowing the contents of said chamber to remain in a quiescent state for a period of time sufficient to permit said waste treating material to substantially reduce the bacteria count of said waste, and thereafter discharging the mixture into said discharge pipe.

3,275,551
DRILLING MUDS
Max R. Annis, Houston, Tex., assignor, by mesne assignments, to Esso Production Research Company, Houston, Tex., a corporation of Delaware
Filed Dec. 27, 1962, Ser. No. 247,594
10 Claims. (Cl. 252—8.5)

6. A drilling mud containing an oil in water emulsion and sufficient amounts of a colloidal complex containing molybdenum, to inhibit sticking of drill pipe and drill collars, said colloidal complex being prepared by extracting an acidic aqueous solution of a molybdenum compound selected from the group consisting of molybdic acid, ammonium salts of molybdic acid, and metal salts of molybdic acid with a volatile oil-soluble solvent selected from the group consisting of ethers that are extractable from water and ketones having in the range of 4 to 10 carbon atoms, said acidic solution having been acidified with a mineral acid to an acidity within the range of 2 N to 12 N, dispersing the resultant oil-soluble solvent extract in an oil-soluble basic metal-containing dispersant having sufficient alkalinity to neutralize the free acidity of said extract, treating said dispersion with hydrogen sulfide and then removing the oil-soluble solvent from the dispersion.

3.275,552
WELL TREATING COMPOSITION AND METHOD
Curtis R. Kern and Herbert L. Rice, Houston, Tex., assignors, by mesne assignments, to Milchem Incorporated, a corporation of Delaware
No Drawing. Filed Apr. 23, 1963, Ser. No. 274,957
2 Claims. (Cl. 252—8.55)

1. A method of preparing a solid, water-soluble surface-active composition for use in wells, comprising the steps of melting crystalline sorbitol in the presence of molal quantities of (1) an amine consisting of a member selected from the group characterized by the generalized formulas

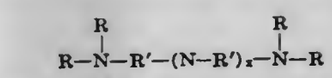


$$R_1N(R_2)(R_3) \text{ and } R_1CONHC_mH_{2m}N(R_2)(R_3)$$

wherein R_1 is an alkyl group containing from 10 to 20 carbon atoms, R_2 and R_3 are alkyl groups containing from 1 to 7 carbon atoms and m is an integer from 2 to 4,

and (2) a compound selected from the group consisting of sodium chloroacetate and sodium chloropropionate, conducting the reaction between said amine and said compound in the presence of the molten sorbitol at a temperature increasing from about 210° F. to about 350° F., and thereafter cooling the resulting reaction mixture to form a solid composition.

3,275,553
GREASE COMPOSITION
Joseph J. McGrath, Monroeville, and Chester S. Tempalski, Pittsburgh, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Filed Oct. 1, 1964, Ser. No. 400,908
6 Claims. (Cl. 252—28)



3. A lubricating composition comprising a dispersion in a major amount of a liquid polyorgano siloxane having diphenylmethylsilyl end groups of about 10 to about 25 percent by weight of a polyazine having the following structural formula

where x is an integer having a value of 4 to 16, said polyazine prior to being incorporated into the liquid polyorgano siloxane having been heated to a temperature of about 450° to about 600° F. for a time sufficient to reduce the weight of the polyazine by about 40 to about 60 percent and about 0.5 to about 5 percent by weight of finely-divided silica.

3,275,554
POLYOLEFIN SUBSTITUTED POLYAMINES AND LUBRICANTS CONTAINING THEM
Adriaan Hendrik Wagenaar, Amsterdam, Netherlands, assignor to Shell Oil Company, New York, N.Y., a corporation of Delaware
No Drawing. Filed Mar. 17, 1964, Ser. No. 352,677
Claims priority, application Netherlands, Aug. 2, 1963, 296,139
6 Claims. (Cl. 252—50)

1. A lubricating oil composition comprising a major amount of lubricating oil and a minor amount, sufficient to impart detergency of an oil-soluble polyolefin-substituted polyalkylene polyamine having the structural formula

where R is selected from the group consisting of hydrogen and polyolefin having a molecular weight of from about 700 to about 100,000, at least one R being polyolefin, R′ is an alkylene radical having from 1 to 8 carbon atoms and x is 0–5.

3,275,555
SYNTHETIC LUBRICANT CONTAINING OXETANE POLYMERS
Francis Henry Waight, Eastham, Wirral, Alexander C. B. MacPhail, Little Sutton, Wirral, and Derek Southern, Heswall, Wirral, England, assignors to Shell Oil Company, New York, N.Y., a corporation of Delaware
No Drawing. Filed May 3, 1963, Ser. No. 277,733
Claims priority, application Great Britain, May 11, 1962, 18,206/62
16 Claims. (Cl. 252—54.6)

1. A synthetic lubricating composition comprising a major amount of a dibasic ester of an aliphatic dicarboxylic acid and a branched chain aliphatic alcohol and from 0.5 to 10% of a polymeric halogen-containing oxetane having from 2 to 20 oxetane units each of which contains at least one halogen which is on carbons other than the carbons adjacent to the oxygen atom of each unit.

3,275,556
DEVELOPER COMPOSITION FOR ELECTRO-PHOTOGRAPHIC IMAGES

Graham C. Whitbread, Norton Summit, South Australia, Australia, assignor to Research Laboratories of Australia Limited, South Australia, Australia

No Drawing. Filed Oct. 18, 1963, Ser. No. 317.133
Claims priority, application Australia, Oct. 25, 1962, 23,601/62
4 Claims. (Cl. 252—62.1)

3. A toner for the overprinting of colour images by electrostatic means consisting essentially of a conjugated drying oil and a pigment suspended in an insulating hydrocarbon carrier liquid having a volume resistivity of at least 10^{10} ohm centimeter and a dielectric constant less than three, said conjugated drying oil being selected from the group consisting of dehydrated castor oil, tung oil, oiticica oil, and menhaden oil, approximately 0.1 to 2.0 grams of said drying oil and pigment being present in 100 milliliters of the carrier liquid.

3,275,557
METHOD OF MAKING MERCURY-DOPED GERMANIUM SEMICONDUCTOR CRYSTALS

Ray C. Hughes, Ardsley, N.Y., assignor to North American Philips Co., Inc., New York, N.Y., a corporation of Delaware

Filed Nov. 13, 1963, Ser. No. 323,298
6 Claims. (Cl. 252—62.3)

1. A method of growing mercury-doped germanium semi-conductor crystals, comprising the step of crystallizing the germanium from a melt in a sealed system containing a weighed charge of mercury as the active dopant while maintaining the minimum temperature prevailing within any point of the system at a value at which the total mercury charge is fully vaporized establishing within the sealed system over the melt an unsaturated vapor of mercury whose pressure is determined by the said minimum temperature to dissolve in the melt an accurately controlled quantity of mercury.

3,275,558
DOUBLY DOPED TITANIUM DIOXIDE MASER ELEMENT

Edward S. Sabisky, Trenton, and Hendrik J. Gerritsen, Princeton, N.J., assignors to Radio Corporation of America, a corporation of Delaware

Filed June 20, 1963, Ser. No. 289,332
8 Claims. (Cl. 252—62.5)

1. A composition of matter consisting essentially of titanium dioxide containing between 0.001 to 0.5 mol percent of one member of the group consisting of Er^{3+} and Co^{2+} and between 0.001 to 0.5 mol percent of at least one member of the group consisting of Cr^{3+}, Fe^{3+}, Ni^{2+} and Mn^{3+}.

3,275,559
HYDRAULIC FLUID

Clemence J. Henry, Newburgh, Paul R. Thomas, Beacon, and Peter Ferrence, Fishkill, N.Y., assignors to Texaco Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Jan. 14, 1963, Ser. No. 251,008
7 Claims. (Cl. 252—75)

1. A hydraulic transmission fluid adapted for automatic transmissions consisting essentially of at least 86 weight percent of a mineral lubricating oil, 0.05 to 0.15 weight percent of a reaction product prepared by reacting about 6 parts by weight of an N-C_{12-18} alkyl alkylene diamine and about 4 parts by weight of a liquid saturated C_{16-20} fatty acid at a temperature from room temperature up to about 140° F. and 0.10 to 0.25 weight percent of a liquid saturated C_{16-20} fatty acid, said hydraulic fluid having improved anti-squawking properties.

6. A hydraulic transmission fluid adapted for automatic transmissions consisting essentially of at least 86 weight percent of a mineral lubricating oil, 0.10 weight percent of reaction product prepared by reacting about 6 parts by weight of an N-tallow trimethylene diamine and about 4 parts by weight of a liquid saturated C_{18} fatty acid at room temperature, 0.15 weight percent of a liquid saturated C_{18} fatty acid, 0.5 to 6.0 weight percent of an oil concentrate containing 30–40 weight percent of a polymer of mixed alkyl esters of methacrylic acid having a molecular weight of at least 50,000, 4.0 to 7.0 weight percent of a 50 weight percent oil concentrate of a basic barium salt of an olefin-P_2S_5 reaction product, 0.5 to 2.0 weight percent of an oil concentrate containing 62 weight percent of a basic barium nonylphenolate, 0.2 to 1.0 weight percent of [4,4'methylene bis(2,6-ditertiarybutylphenol)] and 0.02 to 0.10 weight percent of a 50 weight percent oil concentrative of a zinc diamyl dithiocarbamate, said hydraulic fluid having improved anti-squawking properties.

3,275,560
METAL CLEANING PASTE

Rene D. Wasserman, Stamford, Conn., and Joseph F. Quaas, Island Park, N.Y., assignors to Eutectic Welding Alloys Corporation, Flushing, N.Y., a corporation of New York

No Drawing. Filed May 23, 1962, Ser. No. 196,886
5 Claims. (Cl. 252—101)

1. A metal cleaning paste consisting essentially of a minor amount of from 1—20% by weight of fine particles of inert oxide material dispersed within a major amount of from 80–90% by weight of an active acid cleaning solution, from 1–99% by weight of said inert oxide material consisting essentially of a mixture of approximately equal amounts by weight of each of silica and aluminum oxide of one micron particle size and smaller, the balance of said inert oxide material being approximately 200 mesh and finer particle size above said one micron particle size to give body to said paste, and said active acid cleaning solution comprising the following constituents in the indicated ranges of percentages by weight of said solution:

Acid constituent:	Proportional range in percent by weight
HCl, concentrated	55–65
HNO_3, concentrated	10–20
H_2SO_4, concentrated	10–20
H_2O	5–20

3,275,561
LUBRICIOUS DETERGENT COMPOSITIONS

David J. Pye, Walnut Creek, and Donald K. Peterson, Los Angeles, Calif., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed Oct. 3, 1957, Ser. No. 687,866
2 Claims. (Cl. 252—110)

1. A lubricious powered hand soap composition which consists essentially of from 50 to 80 parts by weight of borax, from 15 to 30 parts by weight of a ground soap consisting of the sodium salts of long-chain fatty acids and from about 0.5 to 4 parts by weight of acrylamide polymer, said polymer being water-soluble and selected from the group consisting of the homopolymer of acrylamide, copolymers of acrylamide with up to about 15 percent by weight of a member of the group consisting of methacrylamide, the lower alkyl esters of acrylic and methacrylic acids, vinyl chloride and vinyl alkyl ethers and copolymers of acrylamide with up to about 50 mole percent of a member of the group consisting of acrylic and methacrylic acids and the alkali metal salts thereof and said polymer being characterized by a viscosity of at least about 4 centipoises for a 0.5 percent by weight solution thereof in aqueous 4 percent by weight sodium chloride solution adjusted to a pH of 5 to 6 and a temperature of 25° C.

3,275,562
NON-CHROMATED ALUMINUM DESMUTTING COMPOSITIONS

Harold Vernon Smith, Philadelphia, Pa., assignor to Pennsalt Chemicals Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Filed Nov. 12, 1963, Ser. No. 322,927
7 Claims. (Cl. 252—147)

1. Acidic aqueous solution for desmutting aluminum and aluminum alloys consisting essentially of water and hydrogen, ferric and fluoride ions, in which the hydrogen ion concentration lies within the range of 0.18 to 1.4 grams per liter, in which the ferric ion concentration lies within the range of 2 to 17 grams per liter, in which the fluoride ion concentration lies within the range of 0.4 to 3.3 grams per liter, in which solution the ratio of the hydrogen ion concentration to the ferric ion concentration lies within the range of 0.03 and 0.36 and in which solution the ratio of the fluoride ion concentration to ferric ion concentration does not exceed the values given by curve AB of the drawing for the corresponding ratios of hydrogen ion concentration to ferric ion concentration, the said solution also being substantially free of chloride ion, said hydrogen ion being provided by at least one compound selected from the group consisting of sulfuric acid, hydrofluoric acid, sulfamic acid, nitric acid, alkali metal acid sulfate, and ammonium acid sulfate, said ferric ion being provided by at least one compound selected from the group consisting of ferric sulfate, ferric fluoride, ferric formate, ferric nitrate and ferric fluosilicate, said fluoride ion being provided by at least one compound selected from the group consisting of ferric fluoride, ferric fluosilicate, alkali metal fluorides, alkali metal fluosilicates, alkali metal fluoborates, aluminum fluoride, ammonium fluoride, alkali metal acid fluorides, ammonium acid fluoride and hydrofluoric acid.

3,275,563
OFFSET ERASING FLUID

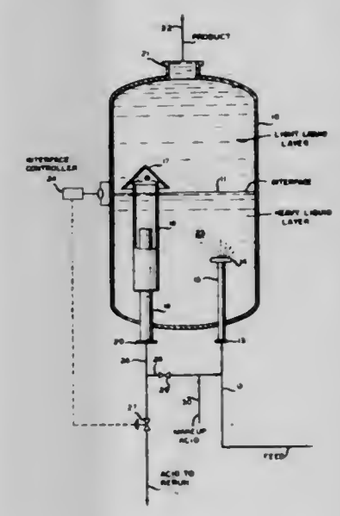
George M. Ort, Chicago, Ill., assignor to A. B. Dick Company, Niles, Ill., a corporation of Illinois

No Drawing. Filed Aug. 3, 1962, Ser. No. 214,476
3 Claims. (Cl. 252—171)

1. A method for removing ink-receptive imaging material applied to the imaged areas of an offset master without altering the ink-repelling characteristics of areas contacted by said fluid in the vicinity of said imaged areas, comprising applying an erasing fluid to said imaged areas in which the fluid consists essentially of from 50–70 volume percent of a chlorinated hydrocarbon solvent and from 30–50 volume percent of a solution of a hydrated salt selected from the group consisting of stannic chloride and ferric chloride and in which the salt is present in an amount within the range of 0.02 to 0.2 grams per ml. in a lower aliphatic alcohol.

3,275,564
PROCESS OF FABRICATION OF SINTERED COMPOUNDS BASED ON URANIUM AND PLUTONIUM

Roger Pascard, Issy-les-Moulineaux, France, assignor to Commissariat a l'Energie Atomique, Paris, France



No Drawing. Filed June 11, 1963, Ser. No. 286,958
Claims priority, application France, June 20, 1962, 901,290
9 Claims. (Cl. 252—301.1)

1. A process for the production of a sintered uranium-plutonium product comprising the steps of grinding to a powder, fragile particles of a uranium-plutonium alloy, the plutonium content of which is from 15 to 80%, and compounding said uranium-plutonium powder by compressing and sintering the ground powder in the presence of compounding metallic and nonmetallic materials selected from the group consisting of molybdenum, niobium, tantalum, zirconium, carbon, silicon, nitrogen and hydrogen sulphide.

3,275,565
IMMISCIBLE LIQUID CONTACTING AND SEPARATION APPARATUS

Howard R. Sailors, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Filed May 23, 1963, Ser. No. 282,644
1 Claim. (Cl. 252—360)

Liquid contacting and separation apparatus for mixing and separating two immiscible liquids comprising:

a vessel adapted to be filled with said immiscible liquids;

liquid interface control means positioned to sense an interface at a preselected level in said vessel, said level being located in the central region of said vessel;

first conduit means positioned within said vessel and extending vertically from a region below said preselected level to a region above said preselected level, the lower end of said first conduit means being in open communication with the lower region of said vessel and the upper end being in open communication with the region above said level;

deflector means positioned above and in spaced relationship with the upper open end of said first conduit means, said deflector means covering the opening of said first conduit means so as to prevent liquid from flowing directly downwardly into said upper open end of said first conduit means from the upper region of said vessel;

second conduit means extending from a region exterior of said vessel into said vessel and terminating in a liquid dispersing means at a region intermediate the lower and upper ends of said first conduit means to permit introduction of liquid into said vessel;

third conduit means positioned inside and extending from the interior and lower open end of said first conduit means and communicating at its upper end with a region intermediate the lower and upper ends of said first conduit means, said third conduit means extending outwardly and to a region exterior of said vessel to remove liquid from said vessel;

fourth conduit means communicating with the top of said vessel above said preselected level to remove liquid from said vessel;

a valve in said third conduit means; and

means responsive to said liquid interface level control means to adjust said valve so as to maintain the liquid interface within said vessel at said preselected level.

3,275,566
CORROSION-INHIBITED PHOSPHATE SOLUTIONS
Robert P. Langguth, St. Louis, Mo., assignor to Monsanto Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Filed Sept. 16, 1965, Ser. No. 487,926
10 Claims. (Cl. 252—389)

1. A liquid aqueous ammonium phosphate solution having a pH above about 7.2 and in contact with a material selected from the group consisting of copper and copper alloys; said solution consisting essentially of at least about 0.5 weight percent of an ammonium phosphate salt dissolved therein selected from the group consisting of monoammonium orthophosphate, diammonium orthophosphate and mixtures thereof and from about 0.01 to about 10 weight percent of a water soluble inorganic thiosulfate compound dissolved therein.

3,275,567
METHOD OF PREPARING A SULFIDED PLATINUM ON CARBON CATALYST
Carl D. Keith, Summit, and Daniel L. Bair, Roselle Park, N.J., assignors to Engelhard Industries, Inc., Newark, N.J., a corporation of Delaware
No Drawing. Filed June 27, 1963, Ser. No. 290,931
3 Claims. (Cl. 252—439)

1. A method for preparing a sulfided platinum on carbon catalyst which comprises admixing particulate carbon with an aqueous solution of a compound of platinum with platinum in the two-valent state, treating the resultant slurry with an alkaline material to effect hydrolysis and deposition of the platinum as a platinum oxide on the carbon support, reducing the supported platinum oxide to metallic platinum in an aqueous slurry, treating the metallic platinum on carbon in an aqueous slurry with a sulfiding agent to convert the platinum on carbon to a sulfide of platinum, and separating the carbon particles having the sulfide of platinum thereon.

3,275,568
LOWER VALENT TITANIUM-ALUMINUM HALIDES
Robert Holroyd Stanley, Hartburn, Stockton-on-Tees, and Derek Howden, Nunthorpe, England, assignors to British Titan Products Company Limited, Billingham, England, a corporation of the United Kingdom
No Drawing. Filed Nov. 13, 1962, Ser. No. 237,346
Claims priority, application Great Britain, Nov. 13, 1961, 40,569/61
10 Claims. (Cl. 252—442)

1. In the reaction in a liquid reaction medium of a titanium tetrahalide and aluminum metal to produce a lower valent titanium-aluminium halide composition, the improvement comprising introducing at least 1 mole of free halogen per 100 moles of tetrahalide into said reaction medium and initiating said reaction in the reactive presence of free halogen.

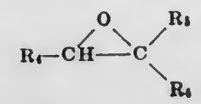
3,275,569
LOWER VALENT TITANIUM-ALUMINIUM HALIDES
Robert Holroyd Stanley, Stockton-on-Tees, and Derek Howden, Nunthorpe, England, assignors to British Titan Products Company Limited, Durham, England, a company of the United Kingdom
No Drawing. Filed Jan. 18, 1963, Ser. No. 252,313
Claims priority, application Great Britain, Jan. 23, 1962, 2,448/62
12 Claims. (Cl. 252—442)

1. In the reaction in a liquid reaction medium of a titanium tetrahalide and aluminum metal to produce a lower valent titanium-aluminium halide composition, the improvement comprising initiating said reaction in the reactive presence of a hydrogen halide.

3,275,570
LOWER VALENT TITANIUM-ALUMINUM HALIDES
Harry Julius Emeleus, Cambridge, and Derek Howden, Nunthorpe, England, assignors to British Titan Products Company Limited, Durham, England, a corporation of the United Kingdom
No Drawing. Filed July 8, 1963, Ser. No. 293,258
Claims priority, application Great Britain, July 13, 1962, 27,034/62
16 Claims. (Cl. 252—442)

1. In the reaction in a liquid reaction medium of a titanium tetrahalide and aluminium metal to produce a lower valent titanium-aluminium halide composition, the improvement comprising initiating said reaction in the reactive presence of an interhalogen compound having the formula AB_x wherein A and B are different halogen atoms other than fluorine and x is an integer from 1 to 3.

3,275,571
CRYSTALLINE ZEOLITE COMPOSITION AND METHOD OF PREPARATION THEREOF
William Judson Mattox, Baton Rouge, La., assignor to Esso Research and Engineering Company, a corporation of Delaware
Filed Sept. 11, 1962, Ser. No. 222,923
14 Claims. (Cl. 252—451)



1. In a process for forming a crystalline alumino-silicate zeolite imbedded in a siliceous matrix, said crystalline alumino-silicate zeolite having been prepared by the interaction of compounds capable of providing alumina, silica, and metal oxides, whereby crystalline alumino-silicate zeolite crystals are allowed to crystallize out of mother liquor solution, the improvement which comprises adding a solution of colloidal silica to an admixture of mother liquor and alumino-silicate zeolite crystals under conditions sufficient to form a gel, the amount of said colloidal silica being sufficient to produce a final product comprising 5 to 90 wt. percent of said crystalline alumino-silicate zeolite imbedded in a silica gel matrix, and thereafter recovering said product.

3,275,572
REFRACTORY COMPOSITION AND ELECTRICAL RESISTANCE MADE THEREFROM
Samuel Ruben, 53 Seacord Road, New Rochelle, N.Y.
No Drawing. Filed Oct. 11, 1961, Ser. No. 144,292
10 Claims. (Cl. 252—518)

4. An electrically conducting oxidation-resistant pressed and sintered refractory composition resistant to oxidation at high temperatures characterized by a stable electrical resistance and by a temperature coefficient of resistance which is adjustable between positive and negative values by adjusting the proportion of its constituents, said composition consisting essentially of 2% to 25% by weight of vanadium pentoxide, 1% to 20% by weight of stannous oxide, and the balance molybdenum disilicide, and said composition being the reaction product of heating the mixture of the compacted constituent powders to a temperature between about 1000° C. and about 1200° C. for a period sufficient to cause exothermic reaction of the said constituent powders but insufficient to cause loss of stannous oxide due to volatilization.

3,275,573
POLYMERIC EPOXIDES
Edwin J. Vandenberg, Wilmington, Del., assignor to Hercules Incorporated, a corporation of Delaware
No Drawing. Filed June 30, 1964, Ser. No. 379,390
6 Claims. (Cl. 260—2)

1. A solid essentially wholly amorphous copolymer of an epoxide containing at least one aliphatic halogen group and at least one other epoxide selected from the group consisting of styrene oxide, cyclohexene oxide and phenyl glycidyl ether, said copolymer having a reduced specific viscosity of at least about 0.5 as measured on a 0.1% solution of the copolymer in α-chloronaphthalene at 100° C, said epoxide containing at least one aliphatic halogen group having the formula

where at least one of R_4 and R_5 is hydrogen and the other is selected from the group consisting of hydrogen, alkyl and haloalkyl groups, and R_6 is selected from the group consisting of haloalkyl and haloalkoxyalkyl groups.

3,275,574
COORDINATION POLYMERS INVOLVING DOUBLY BRIDGED TRIVALENT OCTAHEDRAL METALS
Anthony J. Saraceno, Flourtown, Pa., assignor to Pennsalt Chemicals Corporation, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Filed July 15, 1964, Ser. No. 382,924
18 Claims. (Cl. 260—2)

1. A polymer having an inorganic backbone consisting of a doubly bridged, trivalent, octahedral metal coordinated with two unidentate ligands wherein each of said bridging groups is the anion of an acid $R_2M'(O)OH$ where R is alkyl, aryl, alkyloxy or aryloxy, M′ is an element selected from group VB having an atomic number greater than 7, and wherein one of said unidentate ligands is a negative monovalent ion and the second unidentate ligand is a neutral molecule selected from the group consisting of water and ammonia.

14. The process of reacting a divalent metal salt having a coordination number of six in its trivalent state with an acid anion of structure $R_2M'(O)O^-$ where R is a member of the group consisting of hydrocarbon alkyl and aryl containing from one to ten carbon atoms, and M′ is an element selected from group VB having an atomic number greater than seven and thereafter oxidizing the metal in the product to the trivalent oxidation state, said oxidation occurring in the presence of a neutral ligand selected from the group consisting of water and ammonia and a univalent ligand.

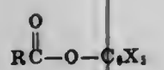
3,275,575
CATION EXCHANGE MEMBRANE FROM A SULFATED POLYVINYL ALCOHOL
Merlyn W. Fogle, Toledo, Ohio, assignor to Eltra Corporation, a corporation of Ohio
No Drawing. Filed Apr. 17, 1962, Ser. No. 188,247
6 Claims. (Cl. 260—2.2)

2. A cation exchange membrane comprising a mixture of polyvinyl alcohol, diglycidyl ether of glycerin and fluoroboric acid, formed as a membrane and heat cured, and thereafter sulfated in a mixture of glacial acetic acid and chlorosulfonic acid.

3. A cation exchange membrane comprising a mixture of polyvinyl alcohol in water, diglycidyl ether of glycerin and diethylene triamine, forming the mixture as a membrane and heat curing, and thereafter sulfating the membrane in a mixture of glacial acetic acid and chlorosulfonic acid.

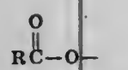
3,275,576
CATION-EXCHANGERS FROM CROSS-LINKED POLYHYDROXY MATERIALS
Per G. M. Flodin, Perstorp, Johan A. O. Johansson, Uppsala, and Stig Å. I. Carlsson, Molnlycke, Sweden, assignors to Aktiebolaget Pharmacia, Uppsala, Sweden, a Swedish company
No Drawing. Filed Nov. 23, 1965, Ser. No. 509,415
Claims priority, application Sweden, June 12, 1959, 5,620/59
2 Claims. (Cl. 260—2.2)

1. As a novel compound, a copolymerizate of:
(a) a member selected from the group consisting of dextran, sucrose, starch, sorbitol, dextrin; polyvinyl alcohol and hydroxyethyl cellulose,
(b) a bi-functional organic substance selected from the group consisting of epichlorohydrin, bis-epoxypropyl-ether and ethylene glycol-bis-epoxy propyl ether which is capable of linking together the aforesaid members by the formation of ether linkages;
(c) said copolymerizate originally containing from 10 to 35 percent of hydroxyl groups, based on the weight of the dry substance, and having from 6 to 50 percent of their hydroxyl groups originally present in the formation substituted by a member selected from the group consisting of radicals of the type R_1Y, wherein
(d) R_1 is an alkylene containing from one to two, inclusive, carbon atoms, and
(e) Y is selected from the group consisting of carboxyl and sulfo; and said novel compound,
(f) being insoluble in water but capable of swelling therein;
(g) having a water regain within the range of 1–50 grams per gram of the dry compound, and
(h) having an ion-exchange capacity within the range of from 2 to 6 milliequivalents per gram of the dry compound.



3,275,577
PREPARING FOAMS OF POLYPROPYLENE-BUTENE-1 COPOLYMERS
Donald F. Hoeg, Mount Prospect, Ill., and Samuel Liebman, Silver Spring, Md., assignors to W. R. Grace & Co., New York, N.Y., a corporation of Connecticut
No Drawing. Filed Feb. 25, 1963, Ser. No. 260,833
4 Claims. (Cl. 260—2.5)

1. A method for preparing foams of propylene-butene-1 copolymers which comprises polymerizing a mixture comprising from about 55 to about 75 mole percent propylene and from about 45 to about 25 mole percent butene-1 in the presence of a catalyst mixture comprising a halide of a transition metal of the fourth to sixth groups of the periodic table and a lower alkyl-metallic compound of a metal of the second to third column of the periodic table at a temperature of from about 50 to about 85° C. until from about 15 to about 75% by weight of said propylene-butene-1 is copolymerized, and removing the unpolymerized propylene and butene-1 from the polymerization mixture by evaporation through release of pressure to form a stable foamed propylene-butene-1 copolymer.



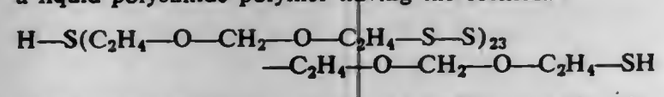
3,275,578
FLAME RESISTANT URETHANE POLYMER COMPOSITIONS OF IMPROVED DIMENSIONAL STABILITY CONTAINING A PENTAHALOPHENYL ESTER AND AN ANTIMONY COMPOUND
Joseph J. Pedjac, Mount Pleasant, and Charles T. Pumpelly, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Filed Dec. 12, 1963, Ser. No. 329,942
6 Claims. (Cl. 260—2.5)

4. A self-extinguishing foam having improved dimensional stability comprising a normally flammable polyurethane resin in intimate admixture with from about

2 to about 5 percent, based on the weight of the foam, of an antimony compound selected from the group consisting of the oxide, chloride, bromide, iodide, oxychloride and sulfide; and an amount of a pentahalophenyl ester having the formula

wherein

is the radical of an alkanoic acid having from one to four carbon atoms and X is chlorine or bromine sufficient to provide about 1.5 to about 10 percent halogen in the foam.



3,275,579
POLYSULFIDE POLYMER SEALING COMPOSITION

Robert F. Stierli, Lexington, and John Becker, Winchester, Mass., assignors to W. R. Grace & Co., Cambridge, Mass., a corporation of Connecticut

No Drawing. Filed Jan. 22, 1964, Ser. No. 339,355
6 Claims. (Cl. 260—6)

1. A composition which is devoid of water comprising a liquid polysulfide polymer containing recurring disulfide linkages (—S—S—) and is a polyfunctional mercaptan, zinc oxide particles coated with a water-soluble adhesive, said adhesive being present in an amount of about 0.5 to 2.0 percent by weight of the zinc oxide, and an amine-carrying molecular sieve containing 2 to 10 percent amine by weight of the zinc oxide wherein the amine is an accelerator for the zinc oxide.

5. A composition which is devoid of water comprising a liquid polysulfide polymer having the formula

a molecular weight of approximately 4000, and a viscosity of 350–450 poises at 80° F.; zinc oxide particles coated with water-soluble glue, said glue being present in an amount of 1.0 to 2.0 percent by weight of the zinc oxide; and 84 parts by weight of a triethylene tetramine-carrying molecular sieve containing 15 percent by weight of amine.

3,275,580
SHAPED ARTICLES CONTAINING CELLULOSE CRYSTALLITE AGGREGATES HAVING AN AVERAGE LEVEL-OFF D.P.

Orlando A. Battista, Drexel Hill, Pa., assignor, by mesne assignments, to FMC Corporation, San Jose, Calif., a corporation of Delaware

No Drawing. Filed Jan. 31, 1963, Ser. No. 255,211
6 Claims. (Cl. 260—17.4)

1. A shaped article of a mixture of filament and film-forming synthetic thermoplastic resin and less than 50% by weight of the mixture of cellulose crystallite aggregates having an average level-off D.P. of from 15 to 375.

3,275,581
COPOLYMERIZATES INCLUDING METHYL GLUCOSIDE ALLYL ETHERS AND PROCESS OF PREPARING SAME

Richard G. Schweiger, San Diego, Calif., assignor to Kelco Company, San Diego, Calif., a corporation of Delaware

No Drawing. Filed Aug. 27, 1963, Ser. No. 304,957
26 Claims. (Cl. 260—17.4)

1. The copolymer of allyl methyl α-D-glucoside and acrylamide.

8. The product obtainable from the copolymer of claim 1 by saponification thereof with an alkali metal hydroxide.

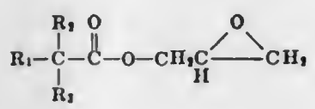
15. The process of producing a polymer which comprises reacting an allyl ether of methyl α-D-glucoside with acrylamide in the presence of a polymerization catalyst, said reaction being carried out at a sufficient temperature and for a sufficient period of time to allow copolymerization to take place.

3,275,582
CARBOHYDRATE DERIVED POLYMERS OF ACRYLONITRILE

William A. P. Black, Polmont, Falkirk, Eric T. Dewar, Dalkeith, and David Rutherford, Edinburgh, Scotland, assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Filed Oct. 11, 1963, Ser. No. 315,700
2 Claims. (Cl. 260—17.4)

1. The copolymer obtained by stirring at 35° C. about 4.11 parts by weight of acrylonitrile and 1 part by weight of 3-O-allyl-1,2:5,6-di-O-isopropylidene-α-D-glucofuranose in the presence of water, an anionic emulsifier, and a 3:1 ratio of potassium persulfate initiator and sodium bisulfite activator, adding additional initiator-activator mixture at the end of 1 hour of reaction, and then continuing the emulsion copolymerization for 24 hours, said copolymer consisting of about 98 mole percent of acrylonitrile and about 2 mole percent of 3-O-allyl-diisopropylideneglucofuranose, a 0.1 percent solution of said copolymer in dimethylformamide at 25° C. having an intrinsic viscosity of 4.2 dl./gm.



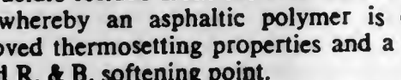
2. The deacetonated copolymer obtained by treating a tetrahydrothiophene-1,1-dioxide solution of the copolymer of claim 1 with HCl until the optical rotation of the solution becomes constant.

3,275,583
ALKYD RESINS PREPARED FROM EPOXY ESTERS OF MONOCARBOXYLIC ACIDS AND PROCESS FOR THE PRODUCTION OF SAME

Nantko Kloos, Amsterdam, Netherlands, assignor to Shell Oil Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed May 16, 1960, Ser. No. 29,165
Claims priority, application Netherlands, May 19, 1959, 239,308
6 Claims. (Cl. 260—22)

4. A stable alkyd resin which is the reaction product of (1) epoxy esters of monocarboxylic acids having the formula



in which R_1 and R_2 are alkyl groups, R_3 is a member of the class consisting of hydrogen and alkyl groups and the groups R_1, R_2 and R_3 contain a total of from 3 to 18 carbon atoms, and (2) a member of the class consisting of phthalic acid, terephthalic acid and phthalic anhydride and wherein the equivalent weight of the epoxy ester components is from about 1 to about 1.3 times the equivalent weight of the carboxylic acid components.

3,275,584
POLYVINYL CHLORIDE PLASTICIZED WITH THE ADDITION PRODUCTS OF ALPHA,BETA-UNSATURATED DICARBOXYLIC ESTERS WITH EPOXIDIZED FATTY ESTERS

William M. Kraft, Verona, and Richard Green, Livingston, N.J., assignors, by mesne assignments, to Tenneco Chemicals, Inc., a corporation of Delaware

No Drawing. Filed Mar. 22, 1962, Ser. No. 181,821
20 Claims. (Cl. 260—23)

14. A resinous composition comprising polyvinyl chloride plasticized with an epoxidized polycarboxylate that is the product of the addition of approximately 1 mole to 2 moles of an unsaturated ester having the formula

wherein each R represents a member individually selected from the group consisting of alkyl groups containing from 1 to 18 carbon atoms and aryl groups and X represents a member selected from the group consisting of hydrogen, methyl, halogen, phenyl, and halophenyl per mole of an ester of epoxidized fatty acids, said epoxidized fatty acids containing from 10 to 22 carbon atoms and from 1 to 3 epoxy groups, said addition being effected by heating said esters at a temperature in the range of 60° to 180° C. in the presence of a free radical promoter.

15. A resinous composition as set forth in claim 14 wherein the epoxidized ester is epoxidized soybean oil having an oxirane oxygen content of approximately 5% to 8%.

3,275,585
ASPHALT-CONTAINING COMPOSITIONS AND METHOD FOR THEIR PREPARATION

Lester A. H. Baum, Cherry Hill, N.J., and Paul F. Bruins, Douglaston, and Leonard Henschel, Flushing, N.Y., assignors to Mobil Oil Corporation, a corporation of New York

No Drawing. Filed June 15, 1964, Ser. No. 375,315
11 Claims. (Cl. 260—28)

2. An improved asphaltic composition obtained by reacting a major proportion of a petroleum asphalt with a minor proportion of an aldehyde, in the presence of a catalyst selected from the group consisting of toluene sulfonic acid, paratoluene sulfonic acid and the acidic residue from the sulfuric acid refining of tall oil, at a temperature from about 150° F. to about 600° F.

8. A composition comprising about 4–10%, by weight of a material selected from the group consisting of furfural and furfural polymers and about 90–96%, by weight, of a petroleum asphalt, in the form of a thermosetting polymer obtained by subjecting the commingled material to a treatment at a temperature of 185–400° F. for a period of 1–6 hours, in the presence of a catalyst in the amount of 1–6%, by weight, and selected from the group consisting of toluene sulfonic acid, paratoluene sulfonic acid and the acidic residue from the sulfuric acid refining of tall oil, whereby an asphaltic polymer is obtained having improved thermosetting properties and a substantially elevated R. & B. softening point.

9. The composition of claim 8 further characterized in that said composition following the aforementioned treatment is commingled with a catalyst selected from the group consisting of phosphoric acid and boron fluoride etherate in the amount of up to 5%, by weight, of the final mixture and is treated for an additional treatment time of ¼ to 2 hours at a temperature of 300° F. to 400° F. whereby the product is further raised in softening point and solvent resistance.

3,275,586
ASPHALTIC PRODUCTS

Robert G. Wurstner, Richmond Heights, and Richard W. Jahnke, Mentor-on-the-Lake, Ohio, assignors to The Lubrizol Corporation, Wickliffe, Ohio, a corporation of Ohio

No Drawing. Filed Oct. 15, 1962, Ser. No. 230,728
4 Claims. (Cl. 260—28.5)

1. A process for making an improved asphaltic composition which comprises reacting at a temperature within the range of from about 50° C. to about 250° C., a mixture of:

(A) 100 parts of a petroleum residuum having a penetration value within the range of from about 150 to about 300,

(B) from about 2 to about 10 parts of a lower olefin polymer obtained from an olefin having from 2 to about 6 carbon atoms, the polymer having a molecular weight of at least about 1000, and

(C) from about 1 to 6 parts of a phosphorus halide.

3,275,587
ADHESIVE COMPOSITION COMPRISING AN EPOXY RESIN, AN AMINE CARBAMATE AND WATER

Ernest E. Weller, Sayreville, and James Plaganis, New Brunswick, N.J., assignors to Tile Council of America, Inc., New York, N.Y., a corporation of New York

No Drawing. Filed Sept. 25, 1962, Ser. No. 226,156
17 Claims. (Cl. 260—29.2)

1. A unitary, one-part bonding composition which comprises in intimate admixture (a) an epoxy resin having the reactive epoxy group,

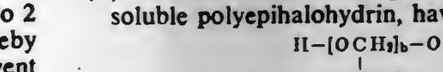
and (b) as the epoxy resin hardener, a carbamate which is a member selected from the group consisting of polyamide carbamates, wherein said polyamide carbamates are formed from polyamides having amine values of at least 80, and poly-amido-amine carbamates, wherein said carbamate on the addition of water at about ambient temperature decomposes to release said poly-amido-amine and polyamide and carbon dioxide which released polyamido-amine and polyamide is capable of entering into a cross linking reaction with the epoxy resin, and in admixture with said composition a sufficient amount of water to carry out said cross-linking reaction.

3,275,588
ETHYLENIMINE-POLYALKYLENEPOLYAMINE-POLYEPIHALOHYDRIN TERPOLYMER FLOCCULANTS

David C. Garms, Lake Jackson, Tex., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed June 16, 1965, Ser. No. 464,560
4 Claims. (Cl. 260—29.2)

1. A resinous terpolymer which comprises the reaction product of:



(1) from about 20 to 40 parts by weight of ethylenimine,

(2) from about 8 to 13 parts by weight of a water-soluble polyalkylenepolyamine having a molecular weight from about 400 to 1200 and the general formula

wherein n is 2, 3, or 4, and a is an integer of from about 6 to about 28, and

(3) from about 2.5 to 3.5 parts by weight of a water-soluble polyepihalohydrin, having the formula

wherein X is chlorine or bromine and b is an integer from about 2 to 10, said polyepihalohydrin, having a molecular weight of from about 250 to 1000,

in from about 45 to 70 parts by weight of water and at a temperature of from about 50° to 125° C.

3,275,589
TERPOLYMER OF VINYL ACETATE, DIALKYL ESTER AND ALKYL ACRYLATE

Robert R. Alexander, Framingham, and Anthony J. Urjil, Byfield, Mass., assignors to W. R. Grace & Co., Cambridge, Mass., a corporation of Connecticut

No Drawing. Filed Feb. 14, 1963, Ser. No. 258,629
12 Claims. (Cl. 260—29.6)

1. A permanently tacky terpolymer consisting of (a) 30 to 40 parts by weight of vinyl acetate, (b) 20 to 35

parts by weight of a monoalkyl ester of an α,β-ethylenically unsaturated monocarboxylic acid having 3 to 5 carbon atoms wherein the alkyl moiety contains 7 to 12 carbon atoms and (c) 30 to 40 parts by weight of a dialkyl ester of an α,β-ethylenically unsaturated dicarboxylic acid having 3 to 5 carbon atoms wherein each alkyl moiety contains 7 to 12 carbon atoms.

3,275,590

DISPERSING CARBON BLACK IN TEREPHTHALATE POLYESTERS BY SAND GRINDING

Lee W. Thomas, Kinston, N.C., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Feb. 21, 1962, Ser. No. 174,699
4 Claims. (Cl. 260—40)

1. In the process of polymerizing monomer to form a fiber-forming synthetic linear condensation polyester and extruding the polyester into a shaped structure, the improvement for incorporating finely-divided, carbon black pigment, of interrupting said polymerizing at a prepolymer form of said polyester having an intrinsic viscosity of 0.05 to 0.3 measured in Fomal solvent at 25° C., sand grinding a melt of said prepolymer and up to 10 parts by weight of the carbon black per 100 parts by weight of prepolymer at a temperature of at least 160° C. with 20–40 mesh sand in a bulk volume ratio of sand to prepolymer within the range of 0.8:1 to 1.2:1, continuing sand grinding with high-speed agitation to produce a carbon black dispersion of less than 1 micron size in the molten prepolymer, separating the sand from the prepolymer and preparing a pigmented polyester having an intrinsic viscosity greater than 0.3 from the prepolymer.

3,275,591

PIGMENTATION OF POLYPROPYLENE FILAMENTS AND FIBERS

Arthur R. Tomlinson, Garden City, Pa., assignor, by mesne assignments, to FMC Corporation, San Jose, Calif., a corporation of Delaware

Filed May 15, 1961, Ser. No. 110,211
1 Claim. (Cl. 260—41)

A process for making pigmentated polypropylene filaments including the steps of dry blending a mass of powdered polypropylene with one or more pigments to provide a generally uniform mixture thereof, delivering said mixture in-between a pair of discs which are maintained in spaced apart relationship by a series of spaced pins and which are rotated relative to a series of spaced fixed pins, rotating said discs together at a speed of up to 3500 revolutions per minute to centrifugally discharge said dry-blended mixture from in-between said discs and against both series of pins to disintegrate pigment agglomerates and to disperse the same throughout the mass of polypropylene, blending the pigmented mass of polypropylene with additional uncolored polypropylene to adjust the pigment concentration and shaping the resulting pigmented mixture into filaments.

3,275,592

CYANURATE AND ISOCYANURATE STABILIZED HALOGEN-CONTAINING OLEFIN POLYMER COMPOSITIONS

Hendrikus J. Oswald, Morristown, and Edith Turi, Livingston, N.J., assignors to Allied Chemical Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed Dec. 12, 1963, Ser. No. 329,977
4 Claims. (Cl. 260—45.8)

1. A composition which comprises a chlorinated polyethylene and in effective stabilizing amount a member selected from the group consisting of triallylcyanurate; tribenzylcyanurate; 2,4,6-(p-ethylphenyl)cyanurate; triallylisocyanurate; and tris(2-hydroxyethyl)isocyanurate.

3,275,593

PRODUCTION OF THERMALLY STABLE POLYOXYMETHYLENES BY BOILING IN WATER

Wilhelm Querfurth, Oberursel, Taunus, Germany, assignor to Deutsche Gold- und Silber-Scheideanstalt vormals Roessler, Frankfurt am Main, Germany

No Drawing. Filed May 10, 1963, Ser. No. 279,628
Claims priority, application Germany, May 19, 1962, D 38,959
6 Claims. (Cl. 260—45.9)

1. A process for improving the heat stability of polyoxymethylenes produced by homopolymerization of water-free formaldehyde in an inert solvent in the presence of a redox system catalyst which comprises heating such polyoxymethylene in boiling water until substantially no formaldehyde can be detected in such water.

3. The process of claim 1 in which said boiling water contains 0.5 to 2.5% by weight of a tertiary amine with reference to the polyoxymethylene boiled in such water.

3,275,594

STABILIZED POLYAMIDES CONTAINING (A) A COPPER COMPOUND AND (B) A NITROGEN CONTAINING ANTIOXIDANT

William Bradford Bond, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Oct. 1, 1962, Ser. No. 227,589
5 Claims. (Cl. 260—45.75)

1. A polyamide stabilized by the addition of from 0.1-1.0% by weight of an organic antioxidant selected from the group consisting of

a mixture of about 35% by weight of N,N′-diphenyl-p-phenylene diamine and 65% by weight of the reaction product of acetone and diphenylamine,

N,N′-dinapthyl-p-phenylenediamine, and

N-phenyl-N′-p-toluenesulfonyl-p-phenylenediamine,

and from 0.005–0.1% by weight of a soluble copper compound, said polyamide being selected from the group consisting of polyhexamethylene adipamide, polyhexamethylene isophthalamide, polyhexamethylene sebacamide, polyoctamethylene oxamide, poly-2-methyl hexamethylene terephthalamide, poly-m-phenylene adipamide, poly-m-phenylene suberamide, poly-m-xylylene adipamide, polyhexamethylene 5-t-butylisophthalamide, polyhexamethylene-2,5-dimethyl terephthalamide, poly-4,4′-dicyclohexylmethane azelamide, poly-4,4′-dicyclohexylmethane sebacamide and copolymers and melt blends thereof.

3,275,595

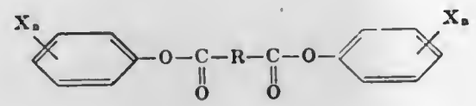
POLYOLEFINS OF IMPROVED LIGHT STABILITY AND DRY RECEPTIVITY CONTAINING CHROMIUM PHENOLATES

David S. Breslow, Wilmington, Del., assignor to Hercules Incorporated, a corporation of Delaware

No Drawing. Filed Mar. 7, 1963, Ser. No. 263,403
4 Claims. (Cl. 260—45.75)

1. A polyolefin selected from the group consisting of polyethylene and stereoregular polymer of a mono-α-olefin having at least 3 carbon atoms containing about 0.01 to about 5%, based on the weight of the polyolefin, of a chromium phenolate selected from the group consisting of the chromium phenolates of bis(p-alkylphenol) sulfoxides and bis(p-alkylphenol) sulfones in which at least one phenolic hydrogen has been replaced by the trivalent chromium ion and about 0.01 to about 5% by weight of the polyolefin of a phenolic compound selected from the group consisting of polyalkylphenols, alkylidene bis(alkylphenol)s, bis(alkylphenol) sulfides, 2(2′-hydroxyphenyl)-2,4,4 - polyalkylchromans, 4(2′ - hydroxyphenyl)-2,2,4-polyalkylchromans, and adducts of an alkylphenol and a cyclic terpene.

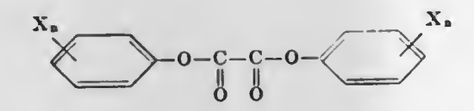
3,275,596



FIRE RESISTANT POLYOLEFINS CONTAINING AN ARSENIC, ANTIMONY, OR BISMUTH COMPOUND AND A HALOGENATED DIAROMATIC ESTER OF A DICARBOXYLIC ACID

Helmut Klug and Karl Kuchinka, Augsburg, Heinrich Peters, Wiesbaden, Dietrich Schleede, Frankfurt am Main, and Jakob Winter, Hofheim, Germany, assignors to Hercules Incorporated, a corporation of Delaware

No Drawing. Filed June 7, 1963, Ser. No. 286,161
Claims priority, application Germany, June 9, 1962, F 37,031; June 13, 1962, F 37,048
8 Claims. (Cl. 260—45.75)



1. A polyolefin composition of reduced flammability comprising (1) a polymer of a mono-alpha-olefin, (2) a compound selected from the group consisting of oxygen and sulfur compounds of arsenic, antimony, and bismuth, and (3) an aromatic ester of a dicarboxylic acid having a formula selected from the group consisting of

(a)

and

(b)

wherein R in Formula *a* is a radical selected from the group consisting of hydrocarbon, chlorohydrocarbon, and oxyhydrocarbon radicals having from 1 to 10 carbon atoms, X in both Formulae *a* and *b* represents a halogen selected from the group consisting of chlorine and bromine, and *n* in both Formulae *a* and *b* is an integer from 2 to 5, compound (2) being present in the amount of 2 to 30 parts by weight per 100 parts of polyolefin and compound (3) being present in the amount of 3 to 30 parts by weight per 100 parts of polyolefin.

3,275,597

STABILIZED POLYOLEFIN CONTAINING A MIXED ESTER OF A POLYFUNCTIONAL ALCOHOL WITH A PHENOL CARBOXYLIC ACID AND AN ALIPHATIC CARBOXYLIC ACID

Otto Mauz and Eberhard Prinz, Frankfurt am Main, Germany, assignors to Hercules Incorporated, a corporation of Delaware

No Drawing. Filed Sept. 16, 1963, Ser. No. 309,322
Claims priority, application Germany, Sept. 27, 1962, F 37,894
11 Claims. (Cl. 260—45.85)

1. A solid polymer of a monolefin containing as a stabilizer from 0.05 to 5% by weight of a mixed ester of a polyfunctional alcohol having 2 to 6 hydroxyl groups with at least 2 different carboxylic acids, 1 of said acids being a phenol monocarboxylic acid selected from the group consisting of gallic acid, bis-(4-hydroxyphenyl) alkanoic acids, and alkyl salicylic acids, and the other being an aliphatic monocarboxylic acid.

3,275,598

POLYMERIZATION OF OXIRANE MONOEPOXIDES IN THE PRESENCE OF AN ORGANOMETALLIC COMPOUND AND AN ALCOHOL

Kenneth T. Garty, Somerville, and Thomas B. Gibb, Jr., Murray Hill, N.J., assignors to Union Carbide Corporation, a corporation of New York

No Drawing. Filed July 1, 1959, Ser. No. 824,191
15 Claims. (Cl. 260—47)

1. Method for the production of a polymer of an epoxide compound which comprises contacting a monomeric oxirane monoepoxide, which is free of ester, acid, amino and aldehyde groups, with at least about 0.01 percent by weight, based on the weight of said oxirane monoepoxide, of an organometallic compound having the formula:

$$R_1—Me—R_2$$

wherein R_1 and R_2 are hydrocarbon radicals having from 1 to 10 carbon atoms and being free of olefinic and acetylenic unsaturation and Me is a metal of Group II of the Periodic Table, and with from about 1.25 to about 1.75 moles of a saturated, aliphatic, monohydric primary alcohol, which is free of ester, acid, amino and aldehyde groups, per mole of said organometallic compound, whereby said oxirane monoepoxide polymerizes to form a polymer.

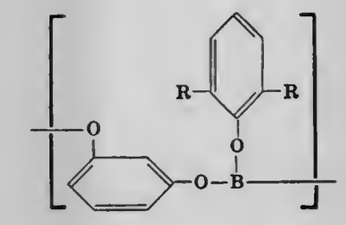
3,275,599

RESINOUS COMPOSITION AND PROCESS FOR PREPARING THE SAME

John C. Petropoulos, Norwalk, Conn., and Ignazio S. Megna, Bronx, N.Y., assignors to American Cyanamid Company, New York, N.Y., a corporation of Maine

No Drawing. Filed June 28, 1961, Ser. No. 120,168
2 Claims. (Cl. 260—47)

1. A heat reaction product of a compound containing at least one epoxide group and the glassy monoanhydride of 1,2,3,4-cyclopentanetetracarboxylic acid composition which softens at a temperature between about 50° C. and 70° C., wherein the oxygen of said epoxide group is attached to vicinal carbon atoms wherein the amount of the epoxy compound used may be varied between about 30% and 150% of the theoretical amount calculated to react fully with the said acid-monoanhydride composition.



3,275,600

POLYMERIC ORGANOBORON COMPOUNDS

Joseph G. Bower, Orange, Calif., assignor to United States Borax & Chemical Corporation, Los Angeles, Calif., a corporation of Nevada

No Drawing. Filed Jan. 15, 1962, Ser. No. 166,423
5 Claims. (Cl. 260—47)

1. Polymeric organoboron compounds having the recurring structural unit

where R is a tertiary alkyl radical of from 4 to 10 carbon atoms.

3,275,601

MANUFACTURE OF POLYCARBONATES USING TERTIARY AMINES, QUATERNARY AMINES AND SALTS THEREOF AS CATALYSTS

Hermann Schnell, Krefeld-Urdingen, and Ludwig Bottenbruch and Heinrich Krimm, both of Krefeld-Bockum, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a corporation of Germany

No Drawing. Original application Jan. 4, 1956, Ser. No. 557,256. Divided and this application July 28, 1965, Ser. No. 475,576
Claims priority, application Germany, Mar. 26, 1955, F 17,167
15 Claims. (Cl. 260—47)

1. In the process for the manufacture of polycarbonates by reacting an organic dihydroxy compound which is a di(monohydroxy-monocyclic aryl) aliphatic hydrocarbon in which each said monohydroxy-monocyclic aryl substituent is attached to the same carbon atom of said aliphatic hydrocarbon moiety with a carbonic acid derivative selected from the group consisting of phosgene and chlorocarbonic acid esters of said organic dihydroxy compounds in aqueous alkaline solution, the improvement comprising increasing the speed of the reaction by employing as a catalyst in said reaction from about 0.05 to about 5% by weight, based on the weight of said dihydroxy compound, of a member selected from the group consisting of tertiary amines, quaternary amines and salts thereof at temperatures from about 0° C. to about 100° C.

3,275,602

APPARATUS AND METHOD FOR THE SEMICONTINUOUS OR CONTINUOUS POLYMERIZATION OF SOLID TRIOXANE

Eduard Weiss, Kelkheim, Taunus, and Edgar Fischer, Frankfurt am Main, Germany, assignors to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Bruning, Frankfurt am Main, Germany

Filed July 11, 1961, Ser. No. 123,222
Claims priority, application Germany, July 16, 1960, F 31,676
9 Claims. (Cl. 260—67)

7. A continuous method for polymerizing solid trioxane in the presence of a solid ionic polymerization catalyst therefor which comprises removing moisture and oxygen from said solid trioxane in an inert atmosphere, continuously admixing the now-purified solid trioxane with said solid ionic catalyst, initiating polymerization of the mixture of solid trioxane and solid catalyst by passing a continuous stream of said mixture through a heating zone, and then removing the heat of polymerization from the resulting polymer by passing said continuous stream through a cooling zone.

3,275,603

POLYMERIZATION OF FORMALDEHYDE

Harry Yakimik, Jr., Garfield, N.J., assignor, by mesne assignments, to Tenneco Chemicals, Inc., a corporation of Delaware

No Drawing. Filed Apr. 25, 1963, Ser. No. 275,513
9 Claims. (Cl. 260—67)

1. In a process for producing a high molecular weight polymer of formaldehyde, in which substantially anhydrous monomeric formaldehyde is polymerized by bringing the monomer into contact with a formaldehyde polymerization initiator in a liquid organic reaction medium at a temperature in the range from about —100° C. to about 80° C., the improvement which comprises conducting the polymerization in the presence of from about 0.001 to about 20 percent by weight, based on the weight of the monomer introduced into the reaction medium, of at least one chain transfer agent selected from the group consisting of saturated aliphatic dicarboxylic acids containing from 2 to 10 carbon atoms, and the lower alkyl esters of said dicarboxylic acids, thereby controlling the molecular weight distribution and improving the yield of the formaldehyde polymer.

3,275,604

MOLDABLE OXYMETHYLENE COPOLYMERS AND METHOD OF PREPARING SAME

Raymond Joseph Kray, Berkeley Heights, and Robert William Stevenson, Edison, N.J., assignors to Celanese Corporation of America, New York, N.Y., a corporation of Delaware

No Drawing. Filed July 19, 1963, Ser. No. 296,377
23 Claims. (Cl. 260—67)

1. A normally solid, moldable copolymer comprising:
(a) at least 60 mol percent of recurring oxymethylene groups and
(b) oxyethylene groups positioned in the polymeric chain, said oxyethylene groups having a —CH_2OR group pendant therefrom and directly attached to a carbon atom of said oxyethylene group, wherein said R group is a monovalent hydrocarbon radical.

3,275,605

AMINE-MODIFIED UREA-FORMALDEHYDE RESINS AND PROCESS OF MANUFACTURE THEREOF

John W. Eastes, Brevard, N.C., and Robert W. Faessinger, Media, Pa., assignors to Scott Paper Company, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Filed Nov. 24, 1964, Ser. No. 413,626
4 Claims. (Cl. 260—70)

3. In the process of making cationic, polyfunctional amine-modified, urea-formaldehyde resins by the acid condensation in an aqueous medium of a reaction mixture of urea, formaldehyde and a polyfunctional aliphatic amine having at least two amino groups, which reaction mixture is susceptible of condensation to the gelling point, the improvement which comprises introducing into the reaction mixture immediately prior to the point of solidification thereof a viscosity lowering additive selected from the group consisting of formaldehyde, paraldehyde, methyl alcohol, ethyl alcohol, normal propyl alcohol, isopropyl alcohol, tertiary butyl alcohol, ethylene glycol, diethylene glycol, triethylene glycol, glycerine, furfuryl alcohol, dimethyl sulfoxide and dimethyl formamide in an amount approximating 5% by weight of the total solids content of said reaction mixture, said amount being sufficient to permit the condensation reaction to be continued without gelation of the reaction mixture, and thereafter sequentially raising and lowering the viscosity of the reaction mixture by further condensation thereof and additive introductions therein.

3,275,606

COMPOSITIONS CONTAINING ADDUCTS OF HEXAHALOCYCLOPENTADIENE

Francis M. Kujawa, Tonawanda, N.Y., and Michael Worsley, Edmonton, Alberta, Canada, assignors to Hooker Chemical Corporation, Niagara Falls, N.Y., a corporation of New York

No Drawing. Filed Sept. 20, 1965, Ser. No. 488,795
13 Claims. (Cl. 260—75)

1. A resinous reaction product, having an acid number of less than 20, of components comprising a monomeric 1,2-epoxide and a resinous polyester having an acid number in the range from 20 to about 90 and selected from the group consisting of (1) the resinous polyester of components comprising (a) an adduct of hexahalocyclopentadiene and a polycarboxylic compound containing aliphatic carbon-to-carbon unsaturation and (b) a polyhydric alcohol containing at least three hydroxyl groups, (2) the resinous polyester of components comprising (a) an adduct of hexahalocyclopentadiene and a polyhydric alcohol containing aliphatic carbon-to-carbon unsaturation, (b) a polyhydric alcohol containing at least three hydroxyl groups and (c) a dicarboxylic compound, (3) the resinous polyester of components comprising (a) an adduct of hexahalocyclopentadiene and a polyhydric alcohol containing aliphatic carbon-to-carbon unsaturation and (b) a polycarboxylic compound containing at least three carboxyl groups, and (4) mixtures thereof, wherein the halo-substituent is selected from the group consisting of fluorine, chlorine, bromine, and mixtures thereof, and wherein the carboxylic compounds are selected from the group consisting of a carboxylic acid, a carboxylic acid anhydride, and mixtures thereof; said resinous reaction product of said acid number of less than 20, by virtue of its monoepoxide component, having a viscosity as measured in Gardner seconds at 120 degrees centigrade that is lower than the viscosity as measured in Gardner seconds at 120 degrees centigrade of the corresponding resinous polyester that is unmodified by a monoepoxide component, but which has the same carboxylic and polyhydric alcohol components employed in the same ratio and has the same acid number of less than 20.

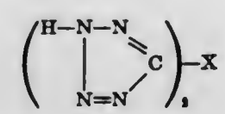
3,275,607

CURING THIOCARBONYL FLUORIDE/ALLYL CHLOROFORMATE COPOLYMERS WITH POLYVALENT METAL OXIDES

James N. Coker, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

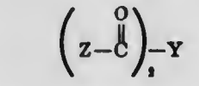
No Drawing. Filed Oct. 31, 1962, Ser. No. 234,547
12 Claims. (Cl. 260—77.5)

1. A composition of matter comprising an intimate mixture of (1) a thiocarbonyl fluoride/allyl chloroformate copolymer containing 0.1–10 mole percent of allyl chloroformate and (2) 1–40% by weight based on the weight of the copolymer of at least one member of the group consisting of the oxides of metals selected from Groups I-B, II-A, and II-B of the Periodic Table, tin and lead.



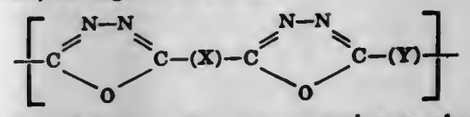
3,275,608

POLYMERS CONSISTING OF 1,3,4-OXADIAZOLE RINGS LINKED BY PERFLUOROALKYLENE AND OPTIONALLY, ARYLENE RADICALS



Franklin L. Montgomery, Wilmington, Del., and David C. Remy, Madison, Wis., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Aug. 6, 1962, Ser. No. 214,860
5 Claims. (Cl. 260—78.4)



1. A process which comprises contacting and reacting in the presence of an inert solvent, 0.875 to 1.125 molar proportions of a bis-tetrazole of the formula

with a molar proportion of a diacyl halide of the formula

wherein Z=halogen, X and Y are independently selected from the group consisting of —$(CF_2)_n$—, in which n=3–14, and arylene, and with the proviso that in the reactants at least 30 mole percent of the total number of X's and Y's are —$(CF_2)_n$—, and obtaining as a result thereof a polymer consisting essentially of units, joined head-to-tail, having the structure

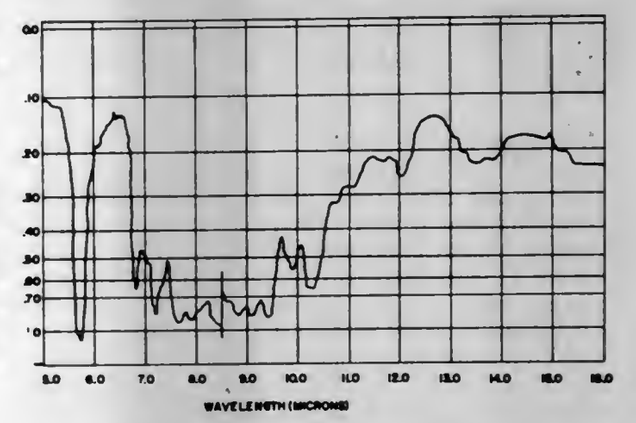
wherein X and Y have the same meaning as above.

3,275,609

BIS(TRIFLUOROMETHYL)THIOKETENE, ITS DIMER AND ITS HOMOPOLYMER

Maynard S. Raasch, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Jan. 7, 1963, Ser. No. 249,606
9 Claims. (Cl. 260—79.7)



1. Bis(trifluoromethyl)thioketene.
3. A homopolymer of bis(trifluoromethyl)thioketene.

3,275,610

MICROBIAL SYNTHESIS OF POLYMERS

Vernon F. Coty, Trenton, N.J., assignor to Mobil Oil Corporation, a corporation of New York

Filed Mar. 24, 1964, Ser. No. 354,231
16 Claims. (Cl. 260—80)

1. Method of producing a thermoplastic polymer by microbial synthesis which comprises dissolving in an aqueous mineral nutrient a carbon compound selected from the class consisting of a four-carbon aliphatic carboxylic acid and a lower alkyl ester derivative thereof, said acid being selected from the group consisting of an unsaturated acid, an unsaturated acid substituted by an oxygen-containing organic radical, a saturated acid, and a saturated acid substituted by an oxygen-containing organic radical, inoculating the aqueous nutrient with a microorganism selected from the following species of Nocardia, Azotobacter, Bacillus, Micrococcus, Rhizobium, Rhodospirillum: *N. salmonicolor, N. asteroides, N. opaca, N. corallina, N, rubra, A. chroococcum, A. agilis, A. indicus, B. megaterium, B. mycoides, B. subtilis, B. cereus, B. anthracis, M. halodenitrificans, M. denitrificans, Rh. leguminosarum, Rh. phaseoli, Rh. trifoli, Rh. lupini, Rh. japonicum, R. rubrum,* and *R. fulvum,* said carbon compound being the sole source of carbon, incubating the resulting mixture, forming said polymer intracellularly of the microorganism, harvesting the cells, rupturing the cell walls and recovering the resulting debris, solvent extracting polymer from the debris in the form of a clear solution of the polymer, and recovering polymer from said solution in a yield of at least about 5% by weight of the dried cells, said polymer being a polymer of said carbon compound and being characterized by the presence of a plurality of hydroxyl and carboxyl groups at least some of which are linked to form ester groups, and said polymer forming flexible films.

3,275,611

PROCESS FOR POLYMERIZING UNSATURATED MONOMERS WITH A CATALYST COMPRISING AN ORGANOBORON COMPOUND, A PEROXYGEN COMPOUND AND AN AMINE

Edward H. Mottus and Joseph E. Fields, Ballwin, Mo., assignors to Monsanto Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Filed Jan. 15, 1965, Ser. No. 425,958

22 Claims. (Cl. 260—80.5)

1. In a process for polymerizing with organoboron having an organo group attached by carbon directly to the boron and peroxygen compound catalysts olefinically unsaturated monomers which undergo addition polymerization with said catalysts and which when the monomers are basic have ionization constants less than 10^{-5}, the improvement comprising carrying out the polymerization in the presence of an amine complexing agent for the boron compound, said complexing agent having an ionization constant in the range of 10^{-5} to 10^{-11}

3,275,612

BIAXIALLY ORIENTED FILM OF ACRYLONITRILE POLYMERS AND PROCESS

Max Fredrick Bechtold, Kennett Square, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

Original application June 2, 1958, Ser. No. 739,181. Divided and this application May 22, 1962, Ser. No. 198,409

2 Claims. (Cl. 260—88.7)

1. A film of a polymer selected from the group consisting of polyacrylonitrile and copolymers of acrylonitrile and at least one other vinyl monomer copolymerizable therewith said copolymers containing at least 75% by weight of acrylonitrile, said polymer having an inherent viscosity of at least 1.2 at 30° C., in dimethyl sulfoxide at a concentration of 0.1% by weight; said film exhibiting an oriented structure in X-ray diffraction patterns resulting from impinging X-rays onto any edge of the film, said film having orientation angles no greater than 80° when said orientation angles are measured in both of two mutually perpendicular directions in the plane of the film using an X-ray beam impinging onto an edge of the film.

3,275,613

PROCESS FOR PREPARING ALPHA-OLEFIN POLYMERS WHICH ARE SUBSTANTIALLY FREE OF RESIDUAL CATALYST

Donald D. Emrick, Maple Heights, Robert J. Sating, Lakewood, and Roman Zorska, Cleveland, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Filed Feb. 6, 1963, Ser. No. 256,554

6 Claims. (Cl. 260—93.7)

1. A process for preparing a solid alpha-olefin polymer which is substantially free of harmful residual catalyst which comprises:

(A) polymerizing in an enclosed zone in a liquid hydrocarbon medium a gaseous alpha-olefin of the formula $R—CH=CH_2$ wherein R is a member of the group consisting of hydrogen and an alkyl group having from 1 to 12 carbon atoms at an alpha-olefin partial pressure of about 10 to 135 p.s.i.g. and at a temperature of from 38 to 90° C. with stirring and efficient cooling for a period of about 5 to 20 minutes in the presence of a four component catalyst consisting essentially of the reaction product of (1) a halide of a metal selected from the group consisting of Group IV(b), Group Vb and Group VI(b) metals, (2) an organoaluminum monohalide, (3) an organoaluminum hydrocarbon, and (4) an organic phosphine, the organic radicals of the foregoing catalyst components having from one to twelve carbon atoms, to form a crumbly, dark solid mixture of polypropylene and catalyst, and

(B) under substantially static conditions polymerizing under autogenous pressure liquid alpha-olefin of the formula $R—CH=CH_2$ where R is a member of the group consisting of hydrogen and an alkyl group having from 1 to 12 carbon atoms onto the dark colored solid catalyst-poly alpha-olefin mixture at from about 50 to 90° C. for a period ranging from 1 to 24 hours to form ultimately a two-phase solid mass the minor phase of which is the crumbly, dark colored solid poly alpha-olefin-catalyst mixture and the major phase of which is a hard, light colored polymer low in residual catalyst contamination, and

(C) mechanically separating the light colored hard polymer which is low in residual catalyst contamination from the dark colored catalyst-polymer mixture and drying said hard polymer.

3,275,614

PROCESS OF PRODUCING CIS - 1,4 - POLYBUTADIENE WITH A CATALYST CONTAINING AN ORGANIC IODINE COMPOUND

Gottfried Pampus and Nikolaus Schön, Leverkusen, and Josef Witte, Cologne-Stammheim, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a German corporation

No Drawing. Filed July 25, 1962, Ser. No. 212,471

Claims priority, application Germany, Aug. 8, 1961, F 34,636

3 Claims. (Cl. 260—94.3)

1. A process for the manufacture of an improved rubbery polybutadiene containing 70–95% of 1,4-cis linkages comprising polymerizing 1,3-butadiene in the presence of a catalyst prepared by combining (a) an organo-lithium compound selected from the group consisting of a lithium-aluminium-tetraalkyl and a lithium-aluminium-alkyl hydride, (b) a halide of titanium selected from the group consisting of titanium tetrachloride and titanium tetrabromide, and (c) an organic iodine compound selected from the group consisting of a C_1 to C_{10} alkyl iodide, an aryl iodide and a cycloalkyl iodide, the mol ratio of the lithium compound to the organic iodine compound ranging from about 1:1 to about 5:1, the titanium halide being present in an amount from about 0.015 to 1.5 parts by weight per 100 parts by weight of 1,3-butadiene, and carrying out the polymerization of said 1,3-butadiene in an inert hydrocarbon diluent at a temperature between about −40° and about +80° C., and recovering the polymer from solution.

3,275,615

PROCESS FOR PRODUCING POLYETHYLENE IN THE PRESENCE OF TERTIARY BUTYL HYDROPEROXIDE AND n-BUTYLAMINE

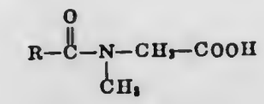
Robert R. Krulisch, Charleston, W. Va., assignor to Union Carbide Corporation, a corporation of New York

No Drawing. Filed Dec. 28, 1962, Ser. No. 247,802

2 Claims. (Cl. 260—94.9)

1. A process for producing polyethylene which comprises polymerizing ethylene at a temperature of from about 150° C. to about 250° C. and at pressure of from about 5000 p.s.i. to about 100,000 p.s.i. with a tertiary butyl hydroperoxide catalyst which has been activated with n-butylamine, the molar ratio of n-butylamine to tertiary butyl hydroperoxide being from about 0.01:1 to about 100:1, and the tertiary butyl hydroperoxide being employed in an amount of from about 1 p.p.m. to about 75 p.p.m., based upon the total amount of ethylene employed.

3,275,616



MODIFIED POLYOLEFINS

John E. Hammond, Rochester, N.Y., assignor to National Distillers and Chemical Corporation, New York, N.Y., a corporation of Virginia

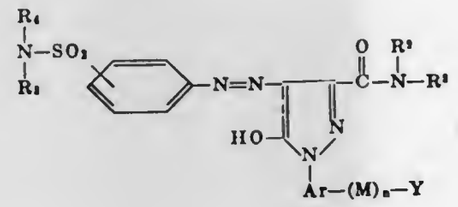
No Drawing. Filed Apr. 19, 1963, Ser. No. 274,352

9 Claims. (Cl. 260—94.9)

1. A polyolefin film-forming composition comprising a polyolefin having incorporated therein at least .001 percent by weight of an N-acyl sarcosine additive represented by the formula:

wherein R is a member selected from the group consisting of alkane and alkylene hydrocarbon radicals containing from about 8 to about 30 carbon atoms.

3,275,617



1 - (4' - HYDROQUINONYLALKYLPHENYL) - 3 - N - (HYDROXYLALKYL) - CARBAMYL - 4 - [(N,N-DIALKYLSULFONAMIDO) - PHENYLAZO] - 5 - PYRAZOLONES

Milton Green, Newton Center, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

No Drawing. Filed Mar. 27, 1963, Ser. No. 268,451

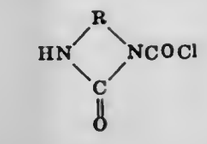
7 Claims. (Cl. 260—163)

1. A compound of the formula:

wherein each of R_4 and R_5 are lower alkyl radicals, each of R^2 and R^3 is a radical selected from the group consisting of hydrogen, lower hydroxyalkyl and lower alkyl radicals and R^2 and R^3 taken together may be a pentamethylene radical completing, with the nitrogen atom attached thereto, a piperidine ring, Ar is an aryl radical, selected from the group consisting of phenyl and naphthyl radicals, M is a lower alkylene radical, *n* is an integer from 0 to 1, inclusive, and Y is para-dihydroxyphenyl radical.

3,275,618

PROCESSES FOR PREPARING ALKYLENE DIISOCYANATES AND INTERMEDIATES THEREFOR



James N. Tilley, Hamden, Henri Ulrich, Northford, and Adnan A. Sayigh, North Haven, Conn., assignors, by mesne assignments, to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Filed June 7, 1962, Ser. No. 200,617

22 Claims. (Cl. 260—239)

1. A process for making lower alkylene diisocyanate in which the two isocyanate groups thereof are separated by not more than four carbon atoms and which has not more than twelve carbon atoms to the alkylene diisocyanate molecule, which comprises reacting phosgene with N,N'-alkylene-bridged urea having a total of eleven carbon atoms to the molecule to form the corresponding N,N'-alkylene-bridged allophanyl chloride and heating such N,N'-allophanyl chloride to cause evolution of hydrogen chloride therefrom to form said alkylene diisocyanate.

9. A compound having the formula:

(I)

wherein R consists of a divalent hydrocarbon radical of not more than 10 carbon atoms having a saturated chain of from 1 to not more than 4 carbon atoms between the valences.

19. A process for making N,N'-alkylene-bridged allophanyl chloride characterized by the group,

and with from one to four carbon atoms in the alkylene bridge directly connecting the nitrogen atoms of such group, which comprises reacting with phosgene the corresponding N,N'-alkylene-bridged cyclic urea characterized by the group, —NHCOHN— in the heterocyclic ring thereof and with an alkylene bridge of from one to four carbon atoms directly connecting the nitrogen atoms thereof, said N,N'-alkylene-bridged urea said reaction being carried out in the presence of an inert solvent-diluent and at a temperature not substantially higher than 80° C.

3,275,619

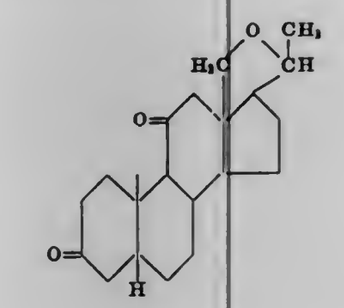
PROCESS FOR THE PREPARATION OF L-α-AMINO-ε-CAPROLACTAM AND INTERMEDIATE THEREFOR

Carl Max Brenner, Riehen, near Basel, and Hans Rudolf Rickenbacher, Basel, Switzerland, assignors to Geigy Chemical Corporation, Ardsley, N.Y., a corporation of Delaware

No Drawing. Filed Dec. 31, 1958, Ser. No. 784,054

Claims priority, application Switzerland, Mar. 15, 1957, 43,891/57

5 Claims. (Cl. 260—239.3)



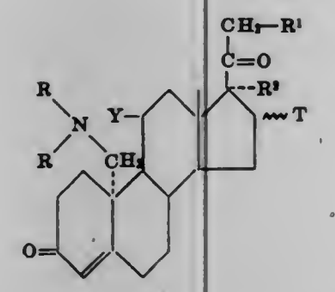
1. A process for the production of L-α-amino-ε-caprolactam from DL-α-amino-ε-caprolactam which consists essentially of reacting DL-α-amino-ε-caprolactam with substantially an equimolar amount of L-2-pyrrolidone-5-carboxylic acid in solution in an alkanol having at most two carbon atoms thereby producing and precipitating difficultly soluble L-α-amino-ε-caprolactam L-2-pyrrolidone-5-carboxylate while simultaneously producing D-α-amino-ε-caprolactam which remains in solution, separating the resultant difficultly soluble L-α-amino-ε-caprolactam L-2-pyrrolidone-5-carboxylate, converting said difficultly soluble L-α-amino-ε-caprolactam L-2-pyrrolidone-5-carboxylate into L-2-pyrrolidone-5-carboxylic acid and L-α-amino-ε-caprolactam hydrochloride by reacting a suspension of the L-α-amino-ε-caprolactam L-2-pyrrolidone-5-carboxylate with a solution of hydrogen chloride in dioxan, filtering off the L-α-amino-ε-caprolactam hydrochloride and then reacting the said hydrochloride in water solution with an equivalent of alkali metal hydroxide, evaporating the resultant solution and distilling free L-α-amino-ε-caprolactam from the so-obtained residue at reduced pressure and at a temperature of less than 120° C., and racemizing the aforesaid D-α-amino-ε-caprolactam by heating the same with an alkali metal alcoholate to a temperature of 150–165° C., and re-using the so-produced DL-α-amino-ε-caprolactam as starting material for the production of L-α-amino-ε-caprolactam by the herein-recited sequence of steps.

3,275,620
NOVEL 18,20β-DIOXYGENATED-5β-PREGNANES

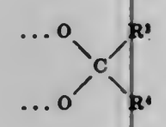
Georges Muller, Nogent-sur-Marne, France, assignor, by mesne assignments, to Roussel-UCLAF, S.A., Paris, France, a corporation of France

No Drawing. Filed June 27, 1960, Ser. No. 38,723
Claims priority, application France, June 29, 1959, 798,790
1 Claim. (Cl. 260—239.55)

A compound having the formula



3,275,621
19-AMINO-Δ⁴-PREGNENES AND -10α-PREGNENES AND PROCESS FOR THEIR PREPARATION



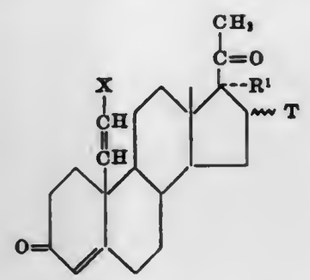
Albert Bowers, Mexico City, Mexico, assignor to Syntex Corporation, Panama, Panama, a corporation of Panama

No Drawing. Filed Dec. 18, 1963, Ser. No. 331,362
38 Claims. (Cl. 260—239.55)

1. A compound of the following formula:

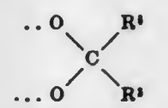
wherein R is selected from the group consisting of hydrogen and lower alkyl; R^1 and R^2 are members of the group consisting of hydrogen, hydroxyl and a hydrocarbon carboxylic acyloxy group of less than 12 carbon atoms and R^2 is hydroxyl when R^1 is other than hydrogen; T is selected from the group consisting of hydrogen, α-methyl, β-methyl, α-hydroxyl and α-hydrocarbon carboxylic acyloxy of less than 12 carbon atoms; R^2 and T together form the group

at the 16α, 17α-positions, wherein R^3 and R^4 each is a lower hydrocarbon residue of up to 8 carbon atoms; Y is a member of the group consisting of hydrogen and β-hydroxyl and where R^1 is hydrogen, Y is hydrogen.



5. 19-amino-16α,17α-isopropylidenedioxy - Δ⁴ - 10α-pregnene-3,20-dione.

3,275,622
19-ALKYLIDENE-Δ⁴-3,20-KETO PREGNANES



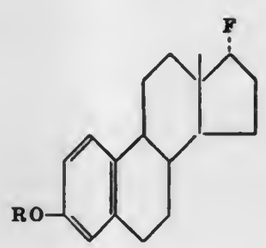
Albert Bowers, Mexico City, Mexico, assignor to Syntex Corporation, Panama, Panama, a corporation of Panama

No Drawing. Filed Dec. 18, 1963, Ser. No. 331,386
40 Claims. (Cl. 260—239.55)

1. A compound of the following formula:

wherein R^1 is selected from the group consisting of hydrogen, hydroxyl and a hydrocarbon carboxylic acyloxy group of less than 12 carbon atoms; T is a member of the group consisting of hydrogen, α-hydroxy, α-hydrocarbon carboxylic acyloxy of less than 12 carbon atoms, α-methyl and β-methyl; T and R^1 together are the group

wherein R^4 and R^5 each is a lower alkyl group; and X is a member of the group consisting of hydrogen and a lower alkyl group.



7. 19 - ethylidene - 16α,17α - isopropylidenedioxy-Δ⁴-pregnene-3,20-dione.

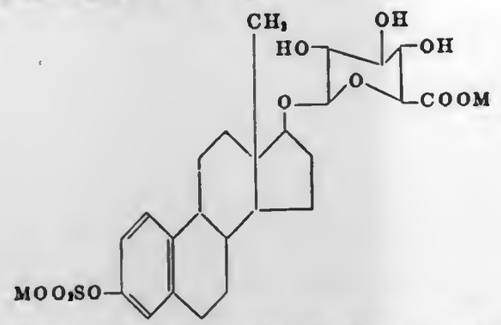
3,275,623
3,17-DISUBSTITUTED-1,3,5(10)-ESTRATRIENE DERIVATIVES

Lawrence H. Knox, Mexico City, Mexico, assignor to Syntex Corporation, Panama, Panama, a corporation of Panama

No Drawing. Filed May 1, 1964, Ser. No. 364,292
Claims priority, application Mexico, July 27, 1962, 68,398
20 Claims. (Cl. 260—239.55)

1. A compound of the following formula:

wherein R is selected from the group consisting of lower alkyl, lower aryl, lower aralkyl, tetrahydropyranyl and lower acyl of less than 12 carbon atoms.



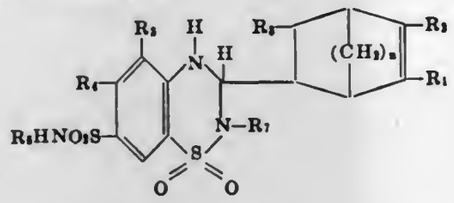
8. 3 - tetrahydropyranyloxy - 17α-fluoro-Δ[1,3,5(10)]-estratriene.

3,275,624
ESTRA-1,3,5(10)-TRIENES HAVING SOLUBILIZING GROUPS

Edward Warren Cantrall and Seymour Bernstein, both of New City, N.Y., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine

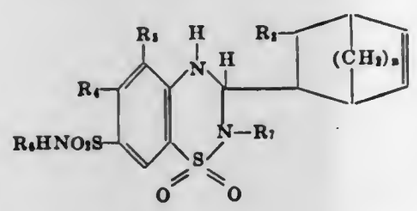
No Drawing. Filed Sept. 16, 1965, Ser. No. 487,913
4 Claims. (Cl. 260—239.55)

1. A steroid of the formula:



wherein M is selected from the group consisting of sodium, potassium and ammonium.

3,275,625
DERIVATIVES OF 7-SULFAMYL-3,4-DIHYDRO-1,2,4 - BENZOTHIADIAZINE-1,1-DIOXIDE AND PROCESS FOR THEIR PREPARATION



Erich Müller and Klaus Hasspacher, Biberach an der Riss, Germany, assignors, by mesne assignments, to Boehringer Ingelheim G.m.b.H., Ingelheim (Rhine), Germany, a corporation of Germany

No Drawing. Filed Jan. 23, 1961, Ser. No. 83,951
4 Claims. (Cl. 260—243)

1. A compound of a structural formula selected from the group consisting of

and

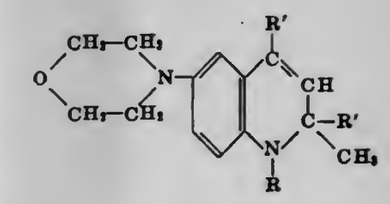
wherein

R_1 and R_2 are selected from the group consisting of hydrogen and bromine,
R_3 is selected from the group consisting of hydrogen and methyl,
R_4 is selected from the group consisting of chlorine and trifluoromethyl,
R_5 is selected from the group consisting of hydrogen, methyl and chlorine,
R_6 and R_7 are selected from the group consisting of hydrogen and methyl, and
n is an integer from 1 to 2, inclusive.

3,275,626
PENICILLIN CONVERSION VIA SULFOXIDE

Robert B. Morin and Billy G. Jackson, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana

No Drawing. Filed July 31, 1962, Ser. No. 213,588
8 Claims. (Cl. 260—243)



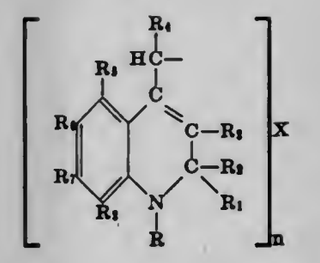
4. A method for converting the thiazolidine ring of a penicillin into the thiazine ring of the cephalosporins which comprises heating a penicillin sulfoxide ester in an inert liquid and in the presence of a strong acid at a temperature between about 125 and about 150° C. for a time sufficient to cause substantial conversion thereof, and recovering the resulting cephalosporin compound.

3,275,627
6-MORPHOLINO-2,2,4 TRILOWERALKYL-1,2 DIHYDROQUINOLINES

Ning Jo Chu, McMasterville, Quebec, Canada, assignor to Canadian Industries Limited, Montreal, Quebec, Canada, a corporation of Canada

No Drawing. Filed Dec. 12, 1962, Ser. No. 243,999
Claims priority, application Great Britain, Jan. 2, 1962, 164/62
2 Claims. (Cl. 260—247.5)

1. A crystalline compound of the formula:



wherein R is selected from the group consisting of hydrogen and lower alkyl radicals and R' is a lower alkyl radical.

3,275,628
4-SUBSTITUTED-ALIPHATIC-2,2-DIALIPHATIC-1,2-DIHYDROQUINOLINES

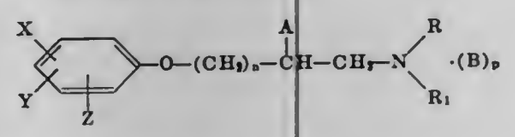
Joseph Patrick Brown, Llangollen, Wales, assignor to Monsanto Chemicals Limited, London, England, a British company

No Drawing. Filed Oct. 29, 1963, Ser. No. 319,663
Claims priority, application Great Britain, Oct. 30, 1962, 40,891/62
19 Claims. (Cl. 260—247.5)

1. A compound selected from the group consisting of a compound having the formula

where n is an integer at least one but less than three, X is selected from a group consisting of hydroxy, lower alkoxy, cyano, thiocyano, mercapto, lower alkylthio, aryloxy, arylthio, thiazolylthio, lower alkylenedioxy, lower alkylenedithio, dithiocarbamyl, lower alkylene bis dithiocarbamyl, isothiouronium, amino, lower alkylamino, cycylohexylamino, benzylamino, arylamino, pyridylamino, di(lower alkyl)amino, piperidino, morpholino, lower alkyl imino, lower alkylene diamino, arylene diamino, piperazinyl, acetyl lower alkoxycarbonylmethyl and bis(lower alkoxycarbonylmethyl), R is selected from a group consisting of hydrogen, carboxylic acid acyl of not more than 12 carbon atoms, lower alkyl sulfonyl and aryl sulfonyl, R_1 and R_2 are lower alkyl, R_3 is selected from a group consisting of hydrogen and halogen, R_4 is selected from a group consisting of hydrogen and lower alkyl, R_5, R_6, R_7 and R_8 are selected from a group consisting of hydrogen, halogen, lower alkoxy, hydroxy, amino, nitro, lower alkyl and aryl, acid addition salts and quaternary ammonium salts thereof, wherein aryl of the aforesaid radicals refers

to phenyl and phenyl substituted by halogen, alkoxy, or tertiary amino.



3,275,629

SUBSTITUTED ARYLOXYALKYLENE AMINES

Manuel M. Baizer, St. Louis, Mo., assignor to Monsanto Company, a corporation of Delaware

No Drawing. Filed Mar. 20, 1963, Ser. No. 266,494
7 Claims. (Cl. 260—247.7)

1. A compound of the formula:

wherein X, Y, and Z are selected from the group consisting of hydrogen, halogen, nitro, and lower alkyl radicals; where A is a halogen radical; where R and R_1 are selected from the group consisting of alkyl, alkenyl, aryl, alkaryl, aralkyl having up to 8 carbon atoms, and when joined together, a heterocyclic selected from the group consisting of morpholino and piperidino; where B is a hydrohalide; where *n* is an integer from 1 to 4; and where *p* is an integer from 0 to 1.

2. 1-(4-morpholino)-2-chloro-3-phenoxy propane.

3,275,630

PROCESS FOR PREPARING A CHLORO-CYANURATE COMPLEX

William F. Symes, Webster Groves, Mo., assignor to Monsanto Company, a corporation of Delaware

No Drawing. Filed Dec. 16, 1963, Ser. No. 330,616
9 Claims. (Cl. 260—248)

1. A process for preparing crystalline [(mono-trichloro,) tetra-(monopotassium dichloro,)] penta-isocyanurate which comprises the steps of bringing together and reacting in a reaction zone an aqueous solution of monopotassium dichloroisocyanurate and an aqueous solution of an acid incapable of undergoing an oxidation reduction reaction with said penta-isocyanurate and said monopotassium dichloroisocyanurate in an amount sufficient to maintain a pH in the range of from about 4.6 to about 5.0 and isolating [(mono-trichloro,) tetra-(monopotassium dichloro,)] penta-isocyanurate.

3,275,631

PROCESS FOR THE PRODUCTION OF CYANURIC ACID

Hiroshi Yanagizawa, Marugame-shi, Japan, assignor to Shikoku Kasei Kogyo Company Limited, Marugame-shi, Kagawa-ken, Japan

No Drawing. Filed Aug. 5, 1964, Ser. No. 387,770
Claims priority, application Japan, Sept. 27, 1963, 38/51,571
7 Claims. (Cl. 260—248)

3. A process of producing cyanuric acid comprising steps of subjecting a starting material selected from the group consisting of urea, biuret, and mixtures of the two to a heat treatment on the surface of at least a molten metal having a melting point not exceeding 350° C. and maintained at a temperature not exceeding 400° C., said metal being selected from the group consisting of tin, bismuth, lead, and alloys, said alloys including at least two components of tin and lead, grinding a solid intermediate product obtained by said heat treatment so as to obtain powder having free fluidity, and subsequently heating said powder by means of a jacketed heater.

3,275,632

MELAMINE PRODUCTION IMPROVEMENT

Ernst Doehlemann, Tacherting, Franz Kaess, Traunstein, Leo Reitter, Neuschalchen, and Kurt Scheinost, Tacherting, Germany, assignors to Süddeutsche Kalkstickstoff-Werke Aktiengesellschaft, Trostberg, Germany

No Drawing. Filed July 19, 1963, Ser. No. 296,389
Claims priority, application Germany, July 20, 1962, S 80,520
5 Claims. (Cl. 260—249.7)

1. In the process for the continuous preparation of melamine which comprises heating urea under substantially atmospheric pressure in a current of ammonia in a fluidized bed of a non-adsorbing non-porous inert material to form ammonium cyanate and passing said ammonium cyanate vapor at a temperature of 260 to 450° C. over a stationary bed of a material containing as catalyst an ion of the group consisting of phosphate, borate, arsenate, and sulfate, the improvement which consists of conducting said process in a reaction zone which presents essentially surfaces of copper to the molten and gaseous phases therein.

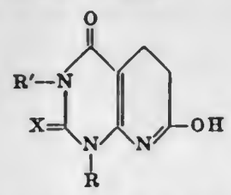
3,275,633

4-HYDROXY-5-FLUOROPYRIMIDINE AND A PROCESS FOR PRODUCING IT AND OTHER COMPOUNDS

Zdeněk Buděšínský, Václav Jelínek, and Jaroslav Přikryl, all of Prague, Czechoslovakia, assignors to Spofa, Sdruzeni podniku pro zdravotnickou vyrobu, Prague, Czechoslovakia

No Drawing. Filed Jan. 17, 1963, Ser. No. 252,049
Claims priority, application Czechoslovakia, Jan. 23, 1962, 449/62
6 Claims. (Cl. 260—251)

1. The compound 4-hydroxy-5-fluoropyrimidine with melting point 209–210° C.



3,275,634

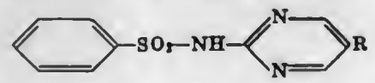
7-HYDROXY-2,4-DIOXO-1,2,3,4,5,6-HEXAHYDRO-PYRIDO[2,3-d]PYRIMIDINES

Viktor Papesch, Morton Grove, Ill., assignor to G. D. Searle & Co., Chicago, Ill., a corporation of Delaware

No Drawing. Filed Sept. 2, 1965, Ser. No. 484,748
5 Claims. (Cl. 260—256.4)

1. A compound of the formula

wherein R is selected from the group consisting of lower alkyl and lower alkenyl; R' is lower alkyl; X is selected from the group consisting of O and S.



3,275,635

CERTAIN 2-BENZENESULFONAMIDE-5-ALKYL (OR ALKOXY) PYRIMIDINE COMPOUNDS

Hans Priewe, Berlin-Steglitz, and Klaus Gutsche, Berlin-Grunewald, Germany, assignors to Schering, A.G., Berlin, Germany

No Drawing. Filed Oct. 12, 1961, Ser. No. 144,530
Claims priority, application Germany, Oct. 18, 1960, Sch 28,634; Feb. 22, 1961, Sch 29,273; Feb. 23, 1961, Sch 29,280
7 Claims. (Cl. 260—256.5)

1. A sulfonamide compound of the formula

wherein R is a member consisting of lower alkyl and lower alkoxy-lower alkoxy.

2. A salt of a sulfonamide compound according to claim 1 with a physiologically tolerated base.

3,275,636

AMINE HEXAFLUOTITANATES

Edwin C. Knowles, Poughkeepsie, N.Y., Edward L. Kay, Akron, Ohio, and Frederic C. McCoy, Beacon, N.Y., assignors to Texaco Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Dec. 19, 1961, Ser. No. 160,642
8 Claims. (Cl. 260—270)

1. The acid addition compound having the formula:

$$[(C_2H_5)_3NH]_2TiF_6$$

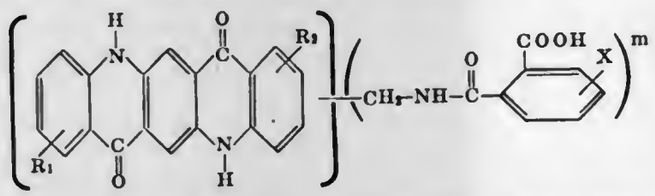
2. The acid addition compound selected from the group consisting of compounds represented by the formula

(A) $(R''R'RN^+H)HTi^-F_6$

and

(B) $(R''R'RN^{++}H)_2Ti{=}F_6$

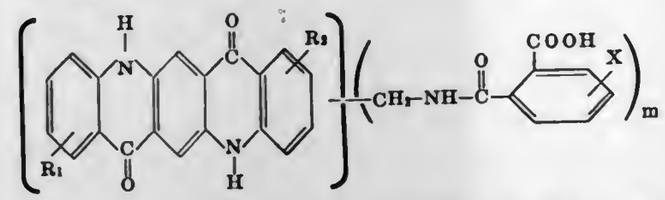
and the pyridine salt of hexafluotitanate where R is selected from the group consisting of alkyl groups and hydroxy-substituted alkyl groups having from 1 to 30 carbon atoms and a phenyl group, R' and R'' are selected from the group consisting of hydrogen and an alkyl group containing from 1 to about 24 carbon atoms.



3,275,637

MODIFIED QUINACRIDONES

William A. West, Westfield, N.J., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware



No Drawing. Filed Nov. 18, 1965, Ser. No. 509,260
14 Claims. (Cl. 260—279)

1. A quinacridone compound having the formula:

wherein the ortho-carboxybenzamidomethyl groups are substituted for aromatic hydrogen on the terminal rings, *m* is an integer from 1 to 4 inclusive, X is selected from the group consisting of hydrogen, fluorine, chlorine, bromine, methyl and methoxy, and R_1 and R_2 are selected from the group consisting of hydrogen, fluorine, chlorine, bromine, methyl and methoxy.

4. A pigment composition of improved tinctorial and rheological properties consisting essentially of an intimate mixture of a quinacridone pigment and about 0.5% to 25% by weight based on the total weigth of the pigment composition of at least one of the quinacridone compounds having the formula:

wherein the ortho-carboxybenzamidomethyl groups are substituted for aromatic hydrogen on the terminal rings, *m* is an integer from 1 to 4 inclusive, X is selected from the group consisting of hydrogen, fluorine, chlorine, bromine, methyl and methoxy, and R_1 and R_2 are selected from the group consisting of hydrogen, fluorine, chlorine, bromine, methyl and methoxy.

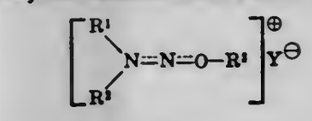
3,275,638

6-HYDROXYMORPHINAN DERIVATIVES AND PRODUCTION THEREOF

Yoshiro Sawa, Hyogo Prefecture, and Naoki Tsuzi and Haruhiko Tada, Osaka Prefecture, Japan, assignors to Shionogi & Co., Ltd., Fukushima-ku, Osaka, Japan

No Drawing. Filed Apr. 4, 1963, Ser. No. 270,558
Claims priority, application Japan, Apr. 9, 1962, 37/14,250
1 Claim. (Cl. 260—285)

(—)-3,6α-dihydroxy-N-methylmorphinan (cis).



3,275,639

O-ALKYL-NITROSIMMONIUM SALTS AND PROCESS FOR THEIR PRODUCTION

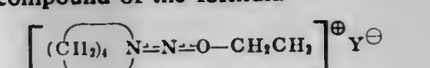
Siegfried Huenig, Hochberg, near Wurzburg, Lothar Geldern, Hamburg-Harburg, and Eberhard Luecke, Ludwigshafen (Rhine), Germany, assignors to Badische Anilin- & Soda-Fabrik Aktiengesellschaft, Ludwigshafen (Rhine), Germany

No Drawing. Filed June 28, 1963, Ser. No. 291,284
Claims priority, application Germany, July 5, 1962, B 67,924
16 Claims. (Cl. 260—293)

1. An O-alkylnitrosimmonium salt of the formula

wherein:

R^1 when taken alone represents a radical selected from the group consisting of alkyl of 1 to 12 carbon atoms, cycloalkyl of 5 to 6 carbon atoms, benzyl, phenylethyl, phenyl, naphthyl, and said benzyl, phenylethyl, phenyl and naphthyl substituted by a member selected from the group consisting of lower alkyl, halogen, lower alkoxy and nitro;



R^2 when taken alone represents a radical selected from the group consisting of alkyl of 1 to 12 carbon atoms, said alkyl substituted by halogen, said alkyl substituted by lower alkoxy and cycloalkyl of 5 to 6 carbon atoms;

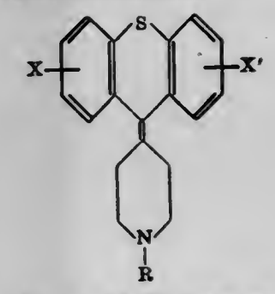
R^1 and R^2 when taken together with the nitrogen atom represent a saturated heterocyclus of 5 to 6 ring members;

R^3 represents alkyl of 1 to 12 carbon atoms; and

$Y^\ominus$ is the anion of a strong mineral acid.

8. The compound of the formula

wherein $Y^\ominus$ is the anion of a strong mineral acid.



3,275,640

SUBSTITUTED 1-HYDROCARBYL-4-(10-THIAXANTHYLIDENE) PIPERIDINES

Edward L. Engelhardt, Gwynedd Valley, and Howard C. Zell, Ambler, Pa., assignors to Merck & Co., Inc., Rahway, N.J., a corporation of New Jersey

No Drawing. Filed Sept. 29, 1961, Ser. No. 141,607
6 Claims. (Cl. 260—293.4)

1. A compound of the formula

wherein X and X' can be the same or different and are selected from the group consisting of hydrogen, halogen,

lower-alkyl, perfluoro lower-alkyl, lower-alkoxy and phenyl, and R is selected from the group consisting of lower-alkyl and lower-alkenyl; and the non-toxic salts of said compound.

3,275,641
4-ACYLOXY-4-ARYL-1-(ARYLAMINOALKYL) PIPERIDINES AND THEIR PREPARATION

Philip M. Carabateas, Schodack, N.Y., assignor to Sterling Drug Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Feb. 27, 1961, Ser. No. 91,606
3 Claims. (Cl. 260—294)

2. 4 - phenyl - 1 - (2 - N - phenyltrifluoroacetamidoethyl)-4-propionoxypiperidine.

3. 4 - phenyl - 1 - (2 - N - phenyltrifluoroacetamidoethyl)-4-piperidinol.

3,275,642
3-PYRIDINE CARBINOL NITRATE AND ITS PREPARATION

Robert H. Broh-Kahn, Hastings on Hudson, and Alexander Galat, Yonkers, N.Y., assignors to Bard Pharmaceutical Inc., Westchester County, N.Y., a corporation of New York

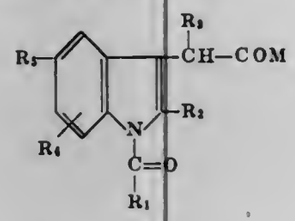
No Drawing. Filed Apr. 26, 1962, Ser. No. 190,233
7 Claims. (Cl. 260—297)

1. A compound selected from the group consisting of the nitrate ester of 3-pyridine carbinol and its water-soluble pharmaceutically acceptable salts.

3,275,643
ALLANTOIN-PANTOTHENATE COMPOUNDS

Irwin I. Lubowe, 667 Madison Ave., New York, N.Y.

No Drawing. Filed July 19, 1963, Ser. No. 296,396
6 Claims. (Cl. 260—299)



1. Allantoin pantothenate.
2. Allantoin aluminum pantothenate.
3. Allantoin calcium pantothenate.

3,275,644
CERTAIN 1-AZOLYLINDOL-3-YLALIPHATIC ACIDS

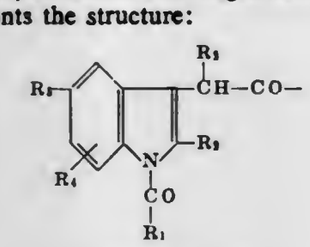
Tsung-Ying Shen, Westfield, N.J., assignor to Merck & Co., Inc., Rahway, N.J., a corporation of New Jersey

No Drawing. Filed Nov. 4, 1963, Ser. No. 321,328
20 Claims. (Cl. 260—302)

1. A compound of the formula:

in which

R_1 is selected from the group consisting of oxazole, thiazole, imidazole, isoxazole, isothiazole, pyrazole, oxadiazole, thiadiazole and oxazole, thiazole, imidazole, isoxazole, isothiazole, pyrazole, oxadiazole, and thiadiazole substituted radicals in which said substituent is selected from the group consisting of halogen, lower alkyl, lower alkylthio, lower alkenylthio, halogeno-lower allylthio, di(lower alkyl)amino lower alkylthio, lower alkoxy, trifluoromethyl, benzyl, phenyl, hydroxy, lower allyl, lower alkoxy, lower alkyl, nitrophenyl, halogenophenyl, anilino, sulfamyl, lower alkanoyl, pyridyl carboxy, carboxamido, cyano, carb-lower alkoxy, cyanomethyl, mercapto, nitro, amino, di(lower alkyl)amino, lower alkyl amino, lower alkanoylamino, hydroxy, amino lower allyl, benzyloxy, halogeno lower alkanoyl, and di(lower alkyl)amino, lower alkyl;



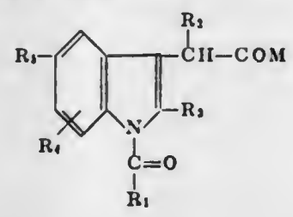
R_2 is selected from the group consisting of hydrogen, lower alkenyl and lower alkyl;

R_3 is selected from the group consisting of hydrogen and lower alkyl;

R_4 is selected from the group consisting of hydrogen, lower alkyl, lower alkoxy, fluorine and trifluoromethyl;

R_5 is selected from the group consisting of hydrogen, hydroxy, lower alkyl, lower alkoxy, nitro, amino, lower alkylamino, di(lower alkyl)amino, lower alkanoylamino, lower alkanoyl, lower alkylamino, bis-(hydroxy lower alkyl)amino, 1-pyrrolidino, 4-methyl-1-piperazinyl, 4-morpholinyl, cyano, amino lower alkyl, di(lower alkyl)amino, lower alkyl, trifluoromethyl, halogen, di(lower alkyl)sulfamyl, benzylthio, lower alkylbenzylthio, lower alkoxybenzylthio, halogenobenzylthio, benzyloxy, lower alkyl benzyloxy, lower alkoxybenzyloxy, halogenobenzyloxy, lower alkenyl, lower alkenyloxy, 1-azacyclopropyl, cyclopropyl(lower alkoxy)methyloxy, and cyclobutyl(lower alkoxy)methyloxy; and

M is selected from the group consisting of OH, NH_2, benzyloxy, lower alkoxy, OZ where Z is selected from the group consisting of an alkaline metal, an alkaline earth metal, aluminum and magnesium and OY where Y represents the structure:



3,275,645
N-(1-ACYL-3-INDOLYL)-ACIDS

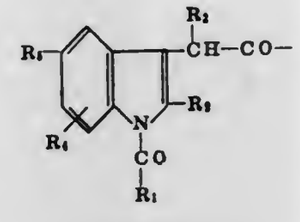
Tsung-Ying Shen, Westfield, N.J., assignor to Merck & Co., Inc., Rahway, N.J., a corporation of New Jersey

No Drawing. Filed Nov. 6, 1963, Ser. No. 321,686
20 Claims. (Cl. 260—304)

1. A compound of the formula:

in which

R_1 is selected from the group consisting of benzisoxazole, benzimidazole, benzofuran, benzothiazole, benzotriazole, benzoxazole, benzothiophene, indole, indazole and an isindazole radical and a substituted benzisoxazole, benzimidazole, benzofuran, benzothiazole, benzotriazole, benzoxazole, benzothiophene, indole, indazole and an isindazole radical in which said substituent is selected from the group consisting of halogen, lower alkyl, lower alkylthio, lower alkoxy, lower alkanoyl, cyano, carb-lower alkoxy, benzylthio, mercapto, nitro, amino, di(lower alkyl)amino, lower alkanoylamino, hydroxy, benzyloxy, di(lower alkanoyl)amino, benzamido, benzenesulfonamido, phenyl, lower alkoxyphenyl, benzoyl, naphthoyl, di(lower alkoxy)phenyl, di(lower alkyl)amino, lower alkyl, amino lower alkyl, lower alkyl amino, nitrophenyl, lower alkanoylamino, phenyl, dihydroxybenzoyl, thenoyl, benzyl, di(lower alkoxy) lower alkyl, lower alkoxy lower alkyl, phenylamino lower alkyl, morpholino lower alkyl, lower alkenyl, halogenobenzyloxy, and lower alkyl benzyloxy;



R_2 is selected from the group consisting of hydrogen, lower alkenyl and lower alkyl;

R_3 is selected from the group consisting of hydrogen and lower alkyl;

R_4 is selected from the group consisting of hydrogen, lower alkyl, lower alkoxy, fluorine and trifluoromethyl;

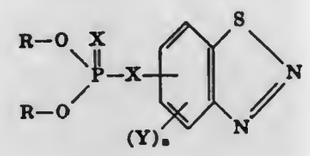
R_5 is selected from the group consisting of hydrogen, hydroxy, lower alkyl, lower alkoxy, nitro, amino, lower alkylamino, di(lower alkyl)amino, lower alkanoylamino, lower alkanoyl, lower alkylamino, bis(hydroxy lower alkyl)amino, 1-pyrrolidino, 4-methyl-1-piperazinyl, 4-morpholinyl, cyano, amino lower alkyl, di(lower alkyl)amino, lower alkyl, trifluoromethyl, halogen, di(lower alkyl)sulfamyl, benzylthio, lower alkylbenzylthio, lower alkoxybenzylthio, halogenobenzylthio, benzyloxy, lower alkylbenzyloxy, lower alkoxybenzyloxy, halogenobenzyloxy, lower alkenyl, lower alkenyloxy, 1-azacyclopropyl, cyclopropyl(lower alkoxy)methyloxy, and cyclobutyl(lower alkoxy)methyloxy; and

M is selected from the group consisting of OH, NH_2, benzyloxy, lower alkoxy, OZ where Z is selected from the group consisting of alkaline metal, alkaline earth metal, aluminum and magnesium and OY where Y represents the structure:

3,275,646
PREPARATION OF THIADIAZOLES

Peter Kirby, 80 Fauchons Lane, Maidstone, England; John Roberts, 247 Lansdale Drive, Gillingham, England; and John H. Davies, 43 Herne Bay Road, Whitstable, England

No Drawing. Filed Dec. 3, 1965, Ser. No. 511,318
Claims priority, application Great Britain, Dec. 8, 1964, 49,895/64
8 Claims. (Cl. 260—304)



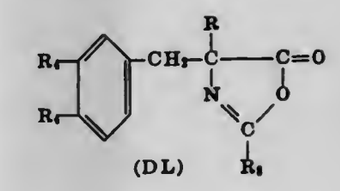
1. A process for the preparation of a hydroxy-1,2,3-benzothiadiazole which comprises diazotisation of the appropriate aminobenzothiazole and acid hydrolysis of the diazotised reaction mixture to form the desired hydroxy-1,2,3-benzothiadiazole.

3,275,647
PHOSPHORUS ESTERS OF HYDROXY-1,2,3-BENZOTHIADIAZOLES

Johannes Th. Hackmann, Enschede, Netherlands, and Peter Kirby, Maidstone, England, assignors to Shell Oil Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed Dec. 6, 1965, Ser. No. 512,019
Claims priority, application Great Britain, Dec. 8, 1964, 49,894/64
8 Claims. (Cl. 260—304)

1. A phosphorus ester of the formula:



wherein each R represents alkyl of from 1 to 4 carbon atoms, *n* is zero or one, Y represents middle halogen and each X represents oxygen or sulfur.

3,275,648
AZLACTONES AND PREPARATION OF SAME

Harry L. Slates, Florham Park, and Norman L. Wendler, Summit, N.J., assignors to Merck & Co., Inc., Rahway, N.J., a corporation of New Jersey

No Drawing. Filed Dec. 31, 1963, Ser. No. 334,691
5 Claims. (Cl. 260—307)

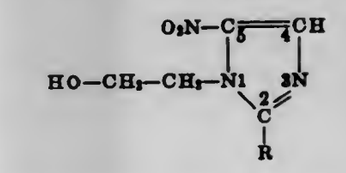
1. A racemic compound of the formula:

(DL)

in which

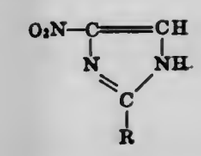
R is a lower alkyl

R_2 is a lower alkyl



R_4 is selected from the group consisting of lower alkoxy and lower alkanoyloxy.

3,275,649
PROCESS FOR THE PREPARATION OF 1-(2-HYDROXYETHYL) IMIDAZOLE DERIVATIVES



Ctirad Podesva and Kitty Vagi, Montreal, Quebec, Canada, assignors to Rhone-Poulenc S.A., a corporation of France

No Drawing. Filed Dec. 16, 1963, Ser. No. 330,547
Claims priority, application Canada, Dec. 20, 1962, 865,113
6 Claims. (Cl. 260—309)

1. A process for the preparation of a 1-(2-hydroxyethyl)-4-nitroimidazole of the formula:

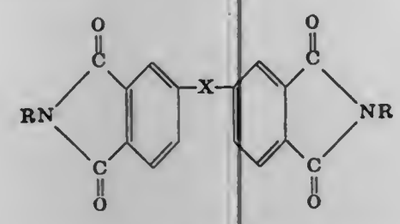
wherein R represents a member of the class consisting of hydrogen, alkyl of up to five carbon atoms, aryl, aralkyl and cycloalkyl, which consists in contacting ethylene oxide with a nitroimidazole of the formula:

wherein R is as just defined, in solution in enough of at least one unsubstituted saturated aliphatic carboxylic acid of up to 4 carbon atoms to dissolve all the nitroimidazole starting material at the reaction temperature, and recovering the 1-(2-hydroxyethyl)-5-nitroimidazole product from the reaction mixture.

3,275,650
7 - NITROSO-7,14-DIAZADISPIRO - [5.1.5.2] - PENTADECANE-15-THIONE AND LOWER ALKYL DERIVATIVES THEREOF

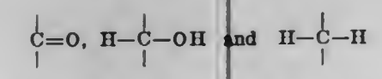
Wendell S. Cook, Fulton, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

No Drawing. Filed Aug. 11, 1964, Ser. No. 388,943
2 Claims. (Cl. 260—309.7)



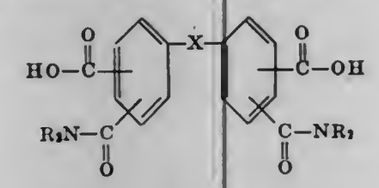
1. 7 - nitroso-7,14-diazadispiro-[5.1.5.2]-pentadecane-15-thione and lower alkyl derivatives thereof substituted on methylene groups which are connected to two other methylene groups.

3,275,651
NITROGEN-CONTAINING DIARYL COMPOUNDS

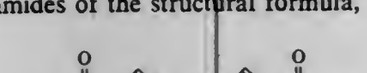


Alan F. Ellis and Johann G. D. Schulz, Pittsburgh, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware

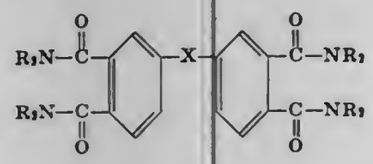
No Drawing. Filed Dec. 16, 1963, Ser. No. 330,563
22 Claims. (Cl. 260—326)



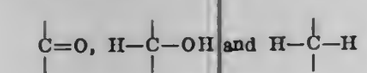
1. Diimides of the structural formula,



wherein R is selected from the group consisting of hydrogen, alkyl groups and aryl groups and X is selected from the groups consisting of



2. Diamic acids of the structural formula,



wherein the substituents on the ring are in the 3 and 4 position relative to X, R is selected from the group consisting of hydrogen, alkyl groups and aryl groups and X is selected from the group consisting of

3. Tetraamides of the structural formula,

wherein R is selected from the group consisting of hydrogen, alkyl groups and aryl groups and X is selected from the group consisting of

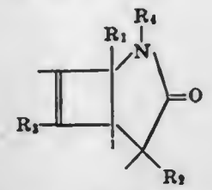
3,275,652
NOVEL 2-CARBOXAMIDO-N-IMIDOMETHYL-6-DEMETHYL-6-DEOXYTETRACYCLINES

Michael Joseph Martell, Jr., 62 Amory Ave., Pearl River, N.Y., and Andrew Stephen Tomcufcik, 48 Dearborn Drive, Old Tappan, N.J.

No Drawing. Filed Feb. 26, 1965, Ser. No. 435,713
11 Claims. (Cl. 260—326)

2. 2 - carboxamido - N - acetamidomethyl - 6 - deoxytetracycline.

7. 2 - carboxamido - N - succinimidomethyl - 5 - hydroxy-6-deoxytetracycline.



10. 2 - carboxamido - N - (4 - methylphthalimidomethyl)-6-deoxytetracycline.

3,275,653
2-AZABICYCLO[3,2,0]HEPT-6-EN-3-ONES AND PROCESS FOR THEIR PRODUCTION

Leo A. Paquette, Portage Township, Kalamazoo County, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Original application May 9, 1963, Ser. No. 279,294. Divided and this application Dec. 3, 1965, Ser. No. 525,788
7 Claims. (Cl. 260—326.5)

1. A compound of the formula:

wherein R_1 and R_2 are alkyl of 1 to 4 carbon atoms, inclusive, wherein R_3 is selected from the group consisting of hydrogen and alkyl of 1 to 4 carbon atoms, inclusive, and wherein R_4 is selected from the group consisting of hydrogen, alkyl of 1 to 6 carbon atoms, inclusive, alkenyl of 3 to 6 carbon atoms, inclusive, alkynyl of 3 to 6 carbon atoms, inclusive, cycloalkyl of 5 to 10 carbon atoms, inclusive, and aralkyl of 7 to 11 carbon atoms, inclusive.

3,275,654
1-ISOPROPYLAMINO-2-HYDROXY-3-PHENOXY-PROPANES AND SALTS THEREOF

Max Wilhelm, Allschwil, Hans Ulrich Daeniker, Reinach, Basel-Land, Karl Schenker, Binningen, and Paul Schmidt, Therwil, Switzerland, assignors to Ciba Corporation, New York, N.Y., a corporation of Delaware

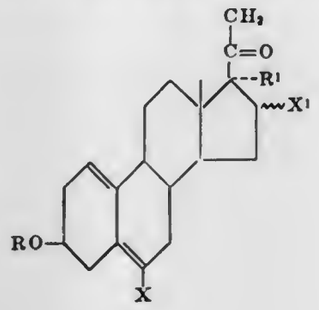
No Drawing. Filed Aug. 20, 1965, Ser. No. 481,410
Claims priority, application Switzerland, Sept. 10, 1964, 11,799/64; July 9, 1965, 9,628/65
6 Claims. (Cl. 260—326.14)

5. An acid addition salt of 1-isopropylamino-2-hydroxy-3-(ortho-methoxymethyl-phenoxy)-propane.

3,275,655
2,3-EPITHIOPROPYL 1-ETHYNYLCYCLOHEXYL ETHER

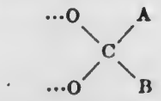
Roger F. Monroe, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed Aug. 7, 1963, Ser. No. 300,630
1 Claim. (Cl. 260—327)



2,3-epithiopropyl 1-ethynylcyclohexyl ether.

3,275,656
$\Delta^{1(10),5}$-19-NOR PREGNADIENES AND PROCESS THEREFOR



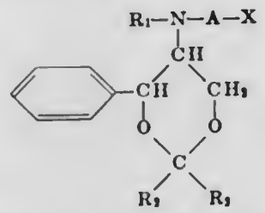
Albert Bowers and Otto Halpern, Mexico City, Mexico, assignors to Syntex Corporation, Panama, Panama, a corporation of Panama

No Drawing. Filed July 9, 1963, Ser. No. 293,831
Claims priority, application Mexico, Mar. 14, 1963, 71,257
20 Claims. (Cl. 260—239.55)

1. A compound of the following formula:

wherein X is selected from the group consisting of hydrogen, lower alkyl, lower alkenyl and lower alkinyl; R is selected from the group consisting of hydrogen and an acyl radical of less than 12 carbon atoms; R^1 is selected from the group consisting of hydrogen, hydroxy and acyloxy of less than 12 carbon atoms; X^1 is selected from the group consisting of hydrogen, α-methyl, β-methyl, α-hydroxy and α-acyloxy of less than 12 carbon atoms and R^1 and X^1 together represent the grouping

wherein A is selected from the group consisting of hydrogen and lower alkyl and B is selected from the group consisting of lower alkyl, aryl and aralkyl of up to 8 carbon atoms.



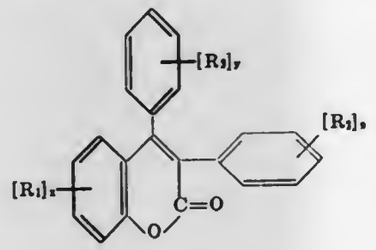
10. 6-methyl-16α,17α-isopropylidenedioxy-$\Delta^{1(10),5}$-19-nor-pregnadien-3β-ol-20-one.

3,275,657
BASIC 1,3-DIOXANES AND THEIR SALTS

Werner Winter and Kurt Stach, Mannheim, and Wolfgang Schaumann, Mannheim-Waldhof, Germany, assignors to C. F. Boehringer & Soehne G.m.b.H., a corporation of Delaware

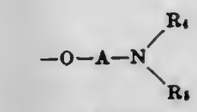
No Drawing. Filed Sept. 13, 1963, Ser. No. 308,633
Claims priority, application Germany, Sept. 29, 1962, B 69,027
5 Claims. (Cl. 260—340.7)

1. A compound of the class consisting of the free base and its acid addition salts, said free base having the formula



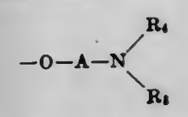
wherein R_1 represents a member selected from the group consisting of hydrogen and methyl, A represents an alkylene radical having from 1–3 carbon atoms, X represents benzohydryl and R_2 and R_3 each represents a member selected from the group consisting of hydrogen, methyl and phenyl and when taken together with the 2–C atom of the dioxane ring a cycloalkyl group of 5–7 carbon atoms, with the proviso that only one of R_2 and R_3 is phenyl and R_1 is methyl when R_2 and R_3 represent dissimilar members selected from the group consisting of methyl and phenyl.

3,275,658
TERTIARY-AMINOALKOXY-SUBSTITUTED 3,4-DIPHENYLCOUMARINS



Daniel Lednicer, Portage Township, Kalamazoo County, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Filed May 23, 1963, Ser. No. 282,568
9 Claims. (Cl. 260—343.2)

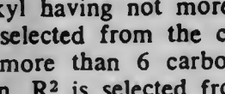


1. A compound selected from the class consisting of (a) a compound having the formula:

wherein R_1, R_2, and R_3 are each selected from the class consisting of lower-alkyl, lower-alkenyl, trifluoromethyl, lower-alkoxy, lower-alkenyloxy, lower-alkylenedioxy, hydroxy, halogen, lower-alkylmercapto, and

wherein A is an alkylene group containing from 2 to 6 carbon atoms, inclusive, R_4 and R_5 are selected from the class consisting of lower-alkyl and lower-alkyl linked together to form, with the attached nitrogen atom, a 5 to 7 ring atom saturated heterocyclic radical, and x, y, and z are each integers from 0 to 4, inclusive, provided that at least one of the groups R_1, R_2, and R_3 represents

(b) an acid addition salt of the compound of the above formula with a pharmacologically acceptable acid; and



(c) a quaternary ammonium salt of the compound of the above formula wherein the anion of the quaternary salt is that of a pharmacologically acceptable acid.

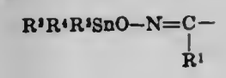
3,275,659
TRIORGANOTIN OXIMES AND THEIR PREPARATION

Gustav Weissenberger, Zurich, Switzerland, assignor to Monsanto Company, a corporation of Delaware

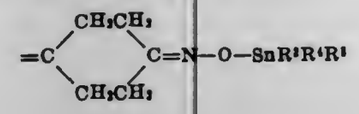
No Drawing. Filed Apr. 9, 1962, Ser. No. 185,797
Claims priority, application Switzerland, Apr. 28, 1961, 5,058/61
13 Claims. (Cl. 260—347.7)

1. A process for preparing triorganotin oximes of the general formula $R^1R^2C{=}N{-}O{-}SnR^3R^4R^5$ wherein R^3, R^4 and R^5 are alkyl having not more than 18 carbon atoms, and R^1 is selected from the class consisting of alkyl having not more than 6 carbon atoms, phenyl, furyl and hydrogen, R^2 is selected from the class consisting of R^1 and

and R^1 and R^2 when taken together with the carbon atom to which they are attached are



groups, comprising heating to reaction temperature an oxime of the formula $R^1R^2C{=}N{—}OH$ wherein R^1 and R^2 are as defined hereinabove, with a tin compound selected from the class consisting of a triorganotin oxide of the formula $(R^3R^4R^5Sn)_2O$ wherein R^3, R^4 and R^5 are as described hereinabove, and continuously removing the water of reaction.



8. A triorganotin oxime of the formula

$$R^1R^2C{=}N{—}O{—}SnR^3R^4R^5$$

wherein R^3, R^4 and R^5 are alkyl having not more than 18 carbon atoms, and R^1 is selected from the class consisting of alkyl having not more than 6 carbon atoms, phenyl, furyl and hydrogen, R^2 is selected from the class consisting of R^1 and

and R^1 and R^2 when taken together with the carbon atom to which they are attached are

groups.

3,275,660

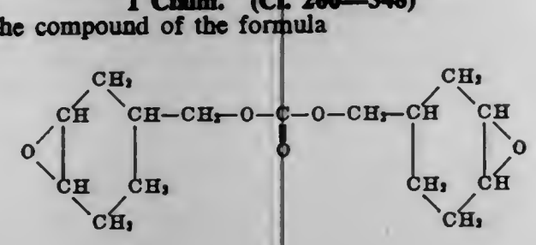
SUBSTITUTED 2,7-DIOXASPIRO(4.4)NONANES

Burton Kendall Wasson, 103 Broadview Ave., Valois, Quebec, Canada, and John Mulvin Parker, 480 Three Valley Crescent, London, Ontario, Canada

No Drawing. Filed Dec. 2, 1965, Ser. No. 511,212
7 Claims. (Cl. 260—347.7)

1. A compound of the formula:

and non-toxic acid addition salts thereof wherein R is a member of the group consisting of (1) Y-phenyl(lower alkyl)amino where Y is a member of the group consisting of bromo, methyl, ethyl, methoxy and ethoxy, and (2) bicyclo(2:2:1)-5-hepten-2-yl(lower alkyl)amino.



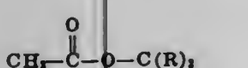
3,275,661

EPOXY COMPOUNDS

Gustav Widmer, Basel, Hans Batzer, Arlesheim, and Erwin Nikles, Basel, Switzerland, assignors to Ciba Limited, Basel, Switzerland, a Swiss firm

No Drawing. Filed Mar. 1, 1960, Ser. No. 11,964
Claims priority, application Switzerland, Mar. 5, 1959, 70,384; Sept. 10, 1959, 78,067
1 Claim. (Cl. 260—348)

The compound of the formula



3,275,662

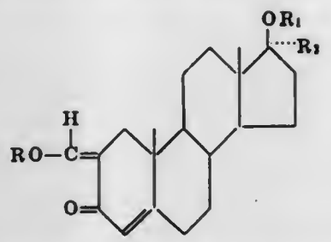
PROCESS FOR THE LIQUID PHASE DIRECT OXIDATION OF OLEFINS TO OLEFIN OXIDES

Virgil W. Gash, Ballwin, Mo., assignor to Monsanto Company, a corporation of Delaware

No Drawing. Filed Nov. 29, 1963, Ser. No. 327,095
13 Claims. (Cl. 260—348.5)

1. Process for the preparation of olefin oxides which comprises oxidizing epoxidizable olefinically unsaturated compounds with molecular oxygen in a solvent selected from the group consisting of acetic acid esters having the formula

and mixtures thereof, wherein each R is selected from the group consisting of hydrogen, straight chain alkyl and haloalkyl groups having from 1 to 3 carbon atoms and straight chain alkyl and haloalkyl groups having from 1 to 3 carbon atoms having as substituents on other than the terminal carbon atom thereof at least one member selected from the group consisting of alkyl and haloalkyl groups having from 1 to 3 carbon atoms, provided that no more than one methylene group is attached to the alpha-carbon atom.



3,275,663

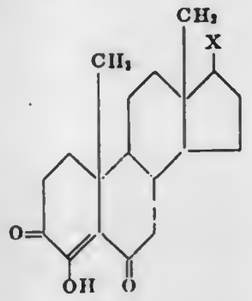
2-HYDROXYMETHYLENE TESTOSTERONE DERIVATIVES

Howard J. Ringold and George Rosenkranz, Mexico City, Mexico, assignors, by mesne assignments, to Syntex Corporation, a corporation of Panama

No Drawing. Filed Jan. 21, 1960, Ser. No. 3,748
Claims priority, application Mexico, Aug. 30, 1957, 48,697
16 Claims. (Cl. 260—397.4)

1. A compound of the following formula:

wherein R is selected from the group consisting of lower alkyl, benzyl and hydrocarbon carboxylic acyl of less than 12 carbon atoms; R_1 is selected from the group consisting of hydrogen and hydrocarbon carboxylic acyl of less than 12 carbon atoms; R_2 is lower alkyl.



3,275,664

4-HYDROXY-3,6-DIKETO STEROIDS AND ENOL ETHERS CORRESPONDING

Harold Levy, Shrewsbury, Mass., and Alex D. Tait, Cardross, Scotland, assignors to G. D. Searle & Co., Chicago, Ill., a corporation of Delaware

No Drawing. Filed Oct. 21, 1964, Ser. No. 405,605
9 Claims. (Cl. 260—397.4)

1. A member selected from the group consisting of compounds of the formula

and the corresponding 3-(lower alkyl) enol ethers, wherein X is a member of the class consisting of hydroxyl, acetoxy, and acetyl radicals.

3,275,665

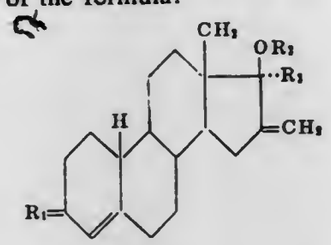
PROCESS FOR THE PREPARATION OF $\Delta^{9(11)}$-STEROID COMPOUNDS

Peter Ziegler, Toronto, Ontario, and John C. Grivas, Weston, Ontario, Canada, assignors to Canada Packers Limited, Toronto, Ontario, Canada

No Drawing. Filed Jan. 23, 1964, Ser. No. 339,611
19 Claims. (Cl. 260—397.5)

1. A process which comprises reacting a 12-oxygenated-$\Delta^{9(11)}$-steroid compound in which any C–20 carbon atom present is bonded only to carbon and hydrogen atoms with an alkali metal aluminum hydride-aluminum halide reducing agent to remove the 12-oxygen function.

12. A process for preparing 3α,24-dihydroxy-$\Delta^{9(11)}$-cholene comprising reducing 3α-hydroxy-$\Delta^{9(11)}$-12-keto-cholenic acid with sodium borohydride to provide the 12-hydroxy derivative thereof and reacting said 12-hydroxy derivative with an excess of $AlCl_3$–$LiAlH_4$ to remove said 12-hydroxy group with simultaneous reduction of the 24-carboxyl group.



3,275,666

16-METHYLENE STEROIDS OF THE ESTRENE SERIES

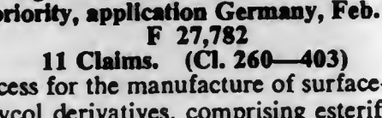
Cornelis Maurits Siegmann, Oss, Netherlands, assignor to Organon Inc., West Orange, N.J., a corporation of New Jersey

No Drawing. Filed Mar. 5, 1964, Ser. No. 349,744
Claims priority, application Netherlands, Mar. 13, 1963, 290,170
4 Claims. (Cl. 260—397.5)

1. Steroids of the formula:

wherein

R_1 is selected from the group consisting of H_2 and O,
R_2 is selected from the group consisting of hydrogen and acyl derived from an organic hydrocarbon carboxylic acid having 1–18 carbon atoms,
R_3 is selected from the group consisting of hydrogen, a saturated and an unsaturated aliphatic hydrocarbon with 1–4 carbon atoms.



3,275,667

PROCESS FOR THE MANUFACTURE OF PHOSPHATE ESTER DERIVATIVES OF POLYALKYLENE GLYCOLS

Johann Bohunek, Burgkirchen, Upper Bavaria, Germany, assignor to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Brüning, Frankfurt am Main, Germany, a corporation of Germany

No Drawing. Filed Jan. 21, 1963, Ser. No. 252,619
Claims priority, application Germany, Feb. 24, 1959, F 27,782
11 Claims. (Cl. 260—403)

1. A process for the manufacture of surface-active polyalkylene-glycol derivatives, comprising esterifying a compound of the formula

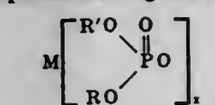
wherein n stands for the integers 3 or 4, u stands for an integer from 1 to 10, v and w represent integers from 0 to 10, x, y and z represent values from 1 to 200, m_1, m_2 and m_3 represent values from 0 to 200, the sum of the values of the correlated integers x and m_1, y and m_2, and z and m_3 not exceeding in each case values ranging from 1 to 200, Z_1, Z_2 and Z_3 represent a member selected from the group consisting of oxygen, sulfur, —COO—, —$CONR_1$—, —$SONR_1$—, —SO— and —SO_2—, wherein R_1 stands for a member selected from the group consisting of a lower alkylene radical and a radical of the formula

$$—(C_nH_{2n}O)_{m_1}(C_2H_4O)_x—C_2H_4OH$$

wherein m_1, n and x have the meaning given above and R stands for a radical selected from the group consisting of phenyl, hydrogen, naphthyl, substituted phenyl or naphthyl wherein the substituents are chloro, nitro or alkyl having up to 12 carbon atoms, phenyl or naphthyl linked by lower alkylene, —CO—, —SO— or —SO_2—, alkyl having up to 30 carbon atoms, phenyl substituted alkyl having up to 30 carbon atoms in the alkyl, naphthyl substituted alkyl having up to 30 carbon atoms in the alkyl, alkyl containing up to 30 carbon atoms having oxygen in its chain, hydrocarbylcycloaliphatic having from 5 to 22 carbon atoms, phenyl substituted hydrocarbylcycloaliphatic having from 5 to 22 carbon atoms, alkyl substituted hydrocarbylcycloaliphatic having from 5 to 34 carbon atoms or a radical of the formula

$$—(C_nH_{2n}O)_{m_1}(C_2H_4O)_x—C_2H_4OH$$

wherein m_1, n and x have the meaning defined above, by heating to 190 to 280° C. for 5 minutes to 25 hours with a member selected from the group consisting of orthophosphoric acid, phosphorus oxy chloride, phosphorus pentoxide, metaphosphoric acid, pyrophosphoric acid, and a polyphosphorus acid formed by further dehydration from ortho-phosphoric acid, and continuously and simultaneously removing volatile by-products liberated during the reaction to form a product having the acid number within the range of 0 to 4.



3,275,668

ORGANOMETALLIC ORTHOPHOSPHATES

Anthony J. Revukas, Cranford, N.J., assignor to Cities Service Oil Company, a corporation of Delaware

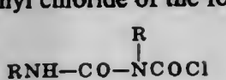
No Drawing. Filed July 31, 1961, Ser. No. 127,840
8 Claims. (Cl. 260—429.3)

2. A liquid compound having the formula:

wherein M is a metal selected from the group consisting of titanium and zirconium, X is a number equal to the valence of the metal M and each of R and R′ is a branched chain alkyl having up to about 30 carbon atoms.

5. Zirconium tetra (bis(2-ethylhexyl) orthophosphate).

7. Zirconium tri (bis(2-ethylhexyl) orthophosphate).



3,275,669

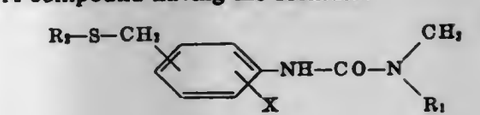
PREPARATION OF ORGANIC ISOCYANATES FROM N,N′-DISUBSTITUTED ALLOPHANYL CHLORIDES

Henri Ulrich, Northford, James N. Tilley, Hamden, and Adnan A. Sayigh, North Haven, Conn., assignors, by mesne assignments, to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Filed Sept. 10, 1962, Ser. No. 222,647
10 Claims. (Cl. 260—453)

1. A process for making isocyanates of the formula RNCO wherein R is a hydrocarbon radical of not more than 18 carbon atoms which is attached to the NCO group by aliphatic carbon which comprises heating a disubstituted allophanyl chloride of the formula

wherein R is as given above in an inert solvent to cause decomposition according to the formula



3,275,670

NOVEL UREA DERIVATIVES

Gustav Steinbrunn, Schwegenheim, Pfalz, Adolf Fischer, Mutterstadt, Pfalz, and Erich Flickinger, Frankweiler, Pfalz, Germany, assignors to Badische Anilin- & Soda-Fabrik Aktiengesellschaft, Ludwigshafen am Rhine, Germany

No Drawing. Filed Nov. 30, 1964, Ser. No. 414,882
Claims priority, application Germany, Dec. 3, 1963, B 74,507; July 4, 1964, B 77,541
4 Claims. (Cl. 260—453)

1. A compound having the formula:

in where R_1 denotes a member selected from the group consisting of methyl, methoxy and sec-but-3-ynyl, R_2 denotes a member selected from the group consisting of an alkyl radical having up to four carbon atoms, an alkyl radical having up to four carbon atoms which bears a hydroxyl group as a substituent, an alkenyl radical having three to four carbon atoms and bearing two to three chlorine atoms as substituents, and the trichlorobenzyl radical X denotes a member selected from the group consisting of hydrogen and chlorine.

3,275,671

STABILIZATION OF ORGANIC ISOCYANATES WITH MONOALKENYL-THIOUREAS

David T. Manning, South Charleston, W. Va., assignor to Union Carbide Corporation, a corporation of New York

No Drawing. Filed Dec. 3, 1963, Ser. No. 327,811
5 Claims. (Cl. 260—453)

1. An isocyanate solution comprising an amount of thiourea sufficient to retard discoloration of the isocyanate, said thiourea possessing one nitrogen atom bearing two hydrogen atoms and the other nitrogen bearing one directly bonded alkenyl radical.

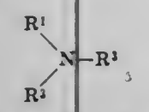
3,275,672

PROCESS FOR PREPARING SULFONIC ACID ESTERS

Rudolf Kühne, Helmut Diery, and Bernhard Kiefer, Frankfurt am Main, Germany, assignors to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Bruning, Frankfurt am Main, Germany, a corporation of Germany

No Drawing. Filed July 9, 1963, Ser. No. 293,865
Claims priority, application Germany, July 12, 1962, F 37,299
10 Claims. (Cl. 260—456)

1. A process for preparing a vinyl sulfonic acid ester which comprises reacting carbyl sulfate, methyl carbyl sulfate, bromomethyl carbyl sulfate or chloromethyl carbyl sulfate with a monohydroxy alkanol of up to 12 carbon atoms at a pH-value greater than 9.



3,275,673

EXTRACTION METHOD FOR RECOVERING AMINE OXIDE SALTS FROM AQUEOUS SOLUTIONS

David O. Barlow, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed May 15, 1963, Ser. No. 280,709
5 Claims. (Cl. 260—459)

1. The method of recovering an amine oxide in the form of a salt thereof from an aqueous solution of said amine oxide, which amine oxide is the oxide of a tertiary amine of the formula

wherein each of R^1 and R^2 is from the group consisting of methyl and ethyl radicals and R_3 is an alkyl radical having from 8 to 20 carbon atoms, said method comprising reacting an aqueous solution of said amine oxide with an acid to form an aqueous solution of a salt of said amine oxide and said acid, extracting said salt from the latter solution with a water-immiscible, polar organic solvent which is a solvent for said salt and is inert thereto and has an atmospheric boiling point not higher than 100° C., then removing said solvent from the resulting extract; said acid being from the group consisting of (a) the aromatic and alkylsubstituted aromatic sulfonic acids in which the alkyl substituent groups contain from 1 to 20 carbon atoms, (b) the aliphatic sulfonic acids containing from 10 to 20 carbon atoms, and (c) the fatty alcohol half-esters of sulfuric acid containing from 10 to 20 carbon atoms; and said organic solvent being from the group consisting of methylene chloride, chloroform, methyl acetate, ethyl acetate, isopropyl acetate, methyl propionate, ethyl propionate, diethyl ether, dipropyl ether, ethyl propyl ether, ethyl butyl ether and methyl butyl ether.

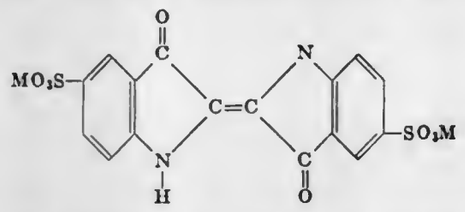
3,275,674

PROCESS FOR THE MANUFACTURE OF CARBONIC ACID ESTERS

Ludwig Bottenbruch, Krefeld-Bockum, and Hermann Schnell, Krefeld-Urdingen, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a corporation of Germany

No Drawing. Filed Aug. 1, 1960, Ser. No. 46,360
Claims priority, application Germany, Dec. 4, 1956, F 21,284
7 Claims. (Cl. 260—463)

1. In a process for the manufacture of monomeric carbonic acid esters by reacting organic hydroxy compounds with a carbonic acid derivative selected from the group consisting of phosgene and chlorocarbonic acid esters of organic hydroxy compounds in an aqueous alkaline solution, the improvement comprising increasing the speed of the reaction by employing as a catalyst in said reaction about 0.005–1% by weight, based on the weight of said hydroxy compounds, of a tertiary amine selected from the group consisting of trimethylamine, triethylamine, tripropylamine, tributylamine, N,N - dimethylcyclohexylamine, N,N-diethylcyclohexylamine, N,N-dimethylaniline, N,N-diethylaniline, pyridine, picoline, methylpyridine and quinoline at temperatures from about 0° C. to about 100° C., said organic hydroxy compounds being selected from the group consisting of saturated and unsaturated unsubstituted alcohols, saturated and unsaturated phenyl-substituted alcohols, unsubstituted partially esterified and partially etherified polyhydric alcohols containing a free hydroxyl group, unsubstituted monohydric phenols and naphthols, unsubstituted polyhydric phenols, monohydric phenols and naphthols which are substituted by a member selected from the group consisting of alkyl, cycloalkyl, halogen and nitro substituents, and unsubstituted partially esterified and etherified polyhydric phenols containing a free hydroxyl group, whereby said monomeric carbonic acid ester is obtained in improved yield and with a higher purity.



3,275,675

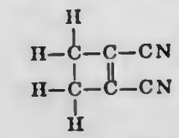
PROCESS FOR MAKING CYCLOBUTANE-1,2-DICYANIDES

James D. Idol, Jr., Shaker Heights, Janice L. Greene, Warrensville Heights, and Nancy R. Gray, Cleveland, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Filed Feb. 17, 1964, Ser. No. 345,076
3 Claims. (Cl. 260—464)

1. The process of forming a cyclobutane-1,2-dicyanide which comprises heating for from ¼ to about 7 hours at least one nitrile selected from the group consisting of acrylonitrile and methacrylonitrile to a temperature of from 175 to 350° C. in the substantial absence of molecular oxygen and in the presence of from 0.01 to about 1.0% by weight of indigo carmine dye having the structure

wherein M is selected from the group consisting of hydrogen and an alkali metal.



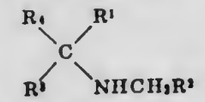
3,275,676

PROCESS FOR PREPARING CYCLOBUTENE-1,2-DICYANIDE

Janice L. Greene, Warrensville Heights, Norman W. Standish, Shaker Heights, and Nancy R. Gray, Cleveland Heights, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Filed Sept. 30, 1963, Ser. No. 312,313
3 Claims. (Cl. 260—464)

1. The method which comprises reacting cyclobutane-1,2-dichloro-1,2-dicyanide with a material selected from the group consisting of a zinc-copper couple and Raney nickel in a solvent and recovering as the product cyclobutene-1,2-dicyanide having the following formula



3,275,677

ALPHA-CYANOMETHYLAMINONITRILE AND ALPHA-CARBOXAMIDOMETHYLAMINONITRILE COMPOUNDS

Duff Shederic Allen, Jr., Dobbs Ferry, and Edward Rudolph Ruso, Nanuet, N.Y., and Sidney A. Frankel, Edison, N.J., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine

No Drawing. Filed Aug. 20, 1963, Ser. No. 303,410
13 Claims. (Cl. 260—465)

1. A compound of the formula:

wherein R^1 and R^2 are cyano, R^3 is lower alkyl and R^4 is selected from the group consisting of phenyl, halophenyl, dihalophenyl, lower alkylphenyl, di(lower)alkylphenyl, lower alkoxyphenyl and trifluoromethylphenyl and acid addition salts thereof.

3,275,678

MIXED ESTERS OF POLYCARBOXYLIC ACIDS (25% AROMATIC DICARBOXYLIC) WITH ETHYLENE OXIDE ADDUCT

Carl Bernstein, Deerfield, and Kermit Longley, Park Forest, Ill., assignors to Witco Chemical Company, Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Sept. 13, 1962, Ser. No. 223,545
5 Claims. (Cl. 260—475)

1. An ester comprising a reaction product of (a) polycarboxylic acid component of which aromatic dicarboxylic acid constitutes at least 25% by weight, with (b) an ethylene oxide adduct of an aliphatic polyhydric alcohol, said aliphatic polyhydric alcohol containing from 3 to 6 hydroxyl groups, said adduct containing, for each mol of said aliphatic polyhydric alcohol, such a number of mols of ethylene oxide whereby said adduct contains from 10 to 20 milli-equivalents, per gram, of hydroxyl groups, said ester having an hydroxyl number between about 280 and about 550.

3,275,679

BIS(ISOCYANOTOALKYL OR PHENYL) TRANS-9,10-DIHYDROANTHRACENE 9,10-ENDO α,β-SUCCINATES

Thomas K. Brotherton and John W. Lynn, Charleston, and Robert J. Knopf, St. Albans, W. Va., assignors to Union Carbide Corporation, a corporation of New York

No Drawing. Filed Jan. 25, 1963, Ser. No. 256,495
3 Claims. (Cl. 260—475)

1. Bis(2-isocyanatoethyl) trans - 9,10 - dihydroanthracene19,10-endo-α,β-succinate.

3,275,680

PRODUCTION OF ORGANIC ACETATES IN PRESENCE OF A NOBLE METAL CATALYST AND OXYGEN

Hermann Holzrichter, Walter Krönig, and Bruno Frenz, Leverkusen, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a corporation of Germany

No Drawing. Filed Jan. 23, 1963, Ser. No. 253,279
Claims priority, application Germany, Feb. 3, 1962, F 35,917; Oct. 11, 1962, F 38,011
15 Claims. (Cl. 260—497)

1. A process for the production of vinyl acetate which comprises reacting ethylene with oxygen and acetic acid in the presence of at least a catalytic amount of a noble metal at a temperature within the range from about 50–250° C., and recovering the vinyl acetate thus produced.

11. A process for the production of vinyl acetate which comprises passing a stream of reactants essentially consisting of oxygen, aqueous acetic acid and ethylene in contact with a noble metal catalyst at a temperature between about 50 and 250° C. and recovering the vinyl acetate thus produced.

3,275,681

CATALYTIC SYSTEM FOR THE ADDITION OF BISULFITES TO OLEFINS

William S. Emerson, Lexington, Richard N. Macnair, Cambridge, and Chi-Hua Wang, Lexington, Mass., assignors to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts

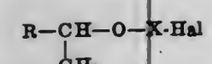
No Drawing. Filed May 20, 1963, Ser. No. 281,797
2 Claims. (Cl. 260—513)

1. A method of adding the bisulfite ion to an olefin, consisting essentially of the step of reacting an inorganic alkali-metal bisulfite dissolved in an aqueous liquid with an olefin of the formula $R—CH=CH_2$, wherein R is alkyl, dissolved in a water-miscible organic liquid; said reacting being in the presence of a catalytic system insoluble in water and soluble in said organic liquid, said catalytic system consisting essentially of an organic peroxide of the formula R'O—OR'', wherein R' and R'' are selected from the group consisting of hydrogen, acyl, alkyl, and aryl-alkyl, and a water-insoluble organometallic compound of a transition metal M which is a β-diketone chelate of said metal or a dicyclopentadienyl of said metal, whereby said catalytic system gives rise to a reaction generally expressed as

$$M^{++}+R'O—OR''\rightarrow M^{+++}+\cdot OR'+OR''^{-}$$

3,275,682

PRODUCTION OF SURFACE-ACTIVE ETHER SULFONATES



Pieter M. Bakker and Hendrik Buesink, Amsterdam, Netherlands, assignors to Shell Oil Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed May 23, 1963, Ser. No. 282,569
Claims priority, application Netherlands, May 29, 1962, 279,025
7 Claims. (Cl. 260—513)

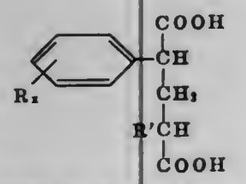
1. A process for producing surface-active higher alkyl ethers of hydroxyalkane sulfonates from a hydrocarbon fraction containing olefins which are predominantly secondary olefins having at least 8 but not more than about 20 carbon atoms per molecule and consisting of secondary alpha-olefin of the formula $R—CH=CH_2$ where R represents alkyl of 6 to 18 carbon atoms together with secondary olefin having the double bond removed from the end of the chain, which comprises

(1) reacting said hydrocarbon fraction with an alkylene halohydrin of the formula HO—X-Hal where X represents alkylene of 2 to 4 carbon atoms, and Hal is halogen of the group consisting of chlorine, bromine, and iodine in the presence of an acid catalyst to effect substantial conversion of secondary

alpha-olefin to predominantly haloalkyl ether of the formula

wherein R repersents alkyl of 6 to about 18 carbon atoms, X is alkylene of 2 to 4 carbon atoms, and Hal is halogen of the group consisting of chlorine, bromine, and iodine and stopping the reaction while substantial internal olefin remains unconverted in the mixture, and

(2) reacting the resulting haloalkyl ether predominating in ether as above defined with a water soluble sulfite to effect replacement of the halogen by a sulfonate group and formation of said surface active product.



3,275,683

PROCESS FOR PRODUCING 2-PHENYLGLUTARIC ACID AND DERIVATIVES THEREOF

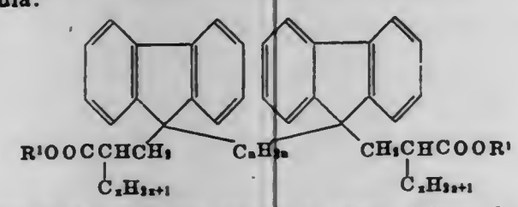
Henry E. Fritz, South Charleston, W. Va., assignor to Union Carbide Corporation, a corporation of New York

No Drawing. Filed Sept. 10, 1962, Ser. No. 222,690
3 Claims. (Cl. 260—515)

1. The process for producing a 2-phenylglutaric acid of the formula:

wherein R is a member selected from the group consisting of alkyl of from 1 to 10 carbon atoms, alkoxy of from 1 to 10 carbon atoms, aryl of from 6 to 10 carbon atoms and aryloxy of from 6 to 10 carbon atoms; R′ is a member selected from the group consisting of hydrogen, alkyl of from 1 to 10 carbon atoms and aryl of from 6 to 10 carbon atoms; and x is an integer having a value of from 0 to 5; which comprises reacting at 150° C. to 350° C. a mixture of an alkali metal phenylacetate, an alkali metal acrylate of the formula:

wherein M is an alkali metal atom, and a catalytic amount of an alkali metal hydroxide.



3,275,684

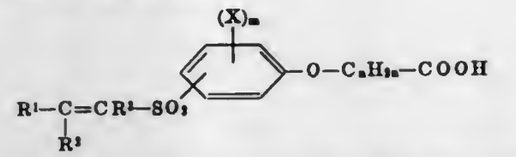
BIS[9-(SUBSTITUTED ALKYL)-FLUOREN-9-YL] ALKANES

Henry E. Fritz, South Charleston, and David W. Peck, Charleston, W. Va., assignors to Union Carbide Corporation, a corporation of New York

No Drawing. Original application Sept. 10, 1962, Ser. No. 222,694, now Patent No. 3,205,257, dated Sept. 7, 1965. Divided and this application Mar. 8, 1965, Ser. No. 438,033
6 Claims. (Cl. 260—515)

1. A bis[9-(carboxyalkyl)fluoren-9-yl]alkane of the formula:

wherein n is an integer having a value of from 2 to 10; x is an integer having a value of from 0 to 1; and R^1 is a member selected from the group consisting of hydrogen, an alkali metal and an alkyl radical of from 1 to 10 carbon atoms.



3,275,685

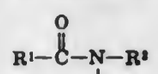
[(1-ALKENYLSULFONYL)PHENOXY] ALKANOIC ACIDS

Everett M. Schultz, Ambler, Pa., assignor to Merck & Co., Inc., Rahway, N.J., a corporation of New Jersey

No Drawing. Filed Apr. 29, 1965, Ser. No. 452,020
18 Claims. (Cl. 260—521)

1. A member selected from the group consisting of a compound of the formula:

wherein R^1, R^2 and R^3 are similar and dissimilar substituents selected from the group consisting of hydrogen and alkyl; the X radicals represent similar and dissimilar substituents selected from the group consisting of hydrogen, halogen, alkyl, alkoxy and, when substituted on adjacent carbon atoms of the benzene nucleus, two X radicals may be combined to form a hydrocarbylene chain containing four carbon atoms between its points of attachment; m is an integer having a value of 1–4 and n is an integer having a value of 1–4; and the nontoxic, pharmacologically acceptable acid salts, the lower alkyl ester, and the amide, monoalkylamide, dialkylamide and piperidide derivatives thereof.



3,275,686

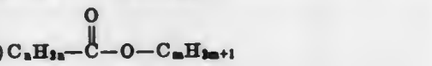
PROCESS FOR THE PREPARATION OF ALKALI METAL SALTS OF ACETYLENIC ACIDS

Abraham N. Kurtz, Charleston, W. Va., assignor to Union Carbide Corporation, a corporation of New York

No Drawing. Filed May 18, 1965, Ser. No. 456,801
15 Claims. (Cl. 260—533)

1. In the process for producing an alkali metal salt of an acetylenic acid by the reaction of an alkali metal acetylide of the formula RC≡CM, wherein M is an alkali metal atom and R is a member selected from the group consisting of a hydrogen atom and an organic hydrocarbon radical of from 1 to 7 carbon atoms selected from the group consisting of an alkyl radical, an alkenyl radical, an aryl radical, an aryl-substituted aryl radical and an alkyl-substituted aryl radical with carbon dioxide in a normally liquid, inert, organic diluent, the improvement of conducting said reaction in the presence of a reaction promoting amount of an amide of the formula:

wherein R^1, when taken alone, is a member selected from the group consisting of a hydrogen atom and an alkyl radical having from 1 to 4 carbon atoms; each R^2 and R^3, when taken alone, is an alkyl radical having from 1 to 4 carbon atoms; and R^1 and R^2, when taken together with the amide radical, form a heterocyclic ring having from 5 to 7 ring atoms, said R^1 and R^2 forming a divalent alkylene radical having from 3 to 5 carbon atoms.



3,275,687

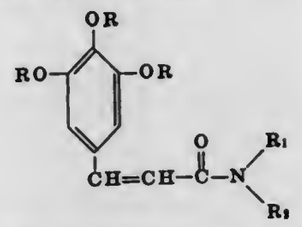
ESTER HYDROLYSIS WITH CATION EXCHANGE RESINS

Robert I. Leib, Kirkwood, Mo., assignor to Monsanto Company, a corporation of Delaware

No Drawing. Filed Sept. 18, 1963, Ser. No. 309,868
11 Claims. (Cl. 260—535)

1. A process for the preparation of monohydroxy substituted monocarboxylic acid which comprises hydrolyzing a compound having the formula,

where m and n are integers from 1 to 4, in the presence of a cation exchange resin catalyst and a cation promoter selected from the group consisting of the metals in Groups IV*b* and V*b* of the periodic table.



3,275,688

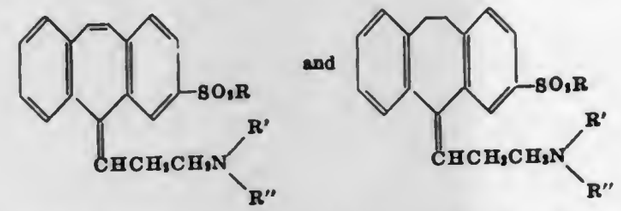
3,4,5-TRI(LOWER)ALKOXYCINNAMAMIDES

Corris Mabelle Hofmann, Ho-Ho-Kus, N.J., assignor to American Cyanamid Company, Stamford, Conn., a corporation of Maine

No Drawing. Original application Oct. 5, 1960, Ser. No. 60,544. Divided and this application Oct. 4, 1963, Ser. No. 313,783
6 Claims. (Cl. 260—559)

1. A compound of the formula:

wherein R is lower alkyl and R_1 and R_2 are each selected from the group consisting of hydrogen and lower alkyl.



3,275,689

3 - ALKYLSULFONYL - 5 - (TERTIARYAMINOPROPYLIDENE)- AND 5-HYDROXY - 5 - (TERTIARYAMINOPROPYL) - 5H - DIBENZO[a,d]CYCLOHEPTENES

Edward L. Engelhardt, Gwynedd Valley, Pa., assignor to Merck & Co., Inc., Rahway, N.J., a corporation of New Jersey

No Drawing. Filed Nov. 8, 1963, Ser. No. 322,498
5 Claims. (Cl. 260—570.8)

1. A compound selected from the group consisting of compounds having the structural formulae

and non-toxic, pharmaceutically acceptable acid addition salts thereof; wherein R is a lower alkyl radical and R′ and R″ are selected from the group consisting of lower alkyl radicals and lower alkyl radicals linked together through an atom selected from the group consisting of carbon, nitrogen and oxygen to form a heterocyclic ring selected from the group consisting of 1-piperidyl, 1-pyrrolidyl, 4-morpholinyl and 1-lower alkyl-4-piperazinyl.

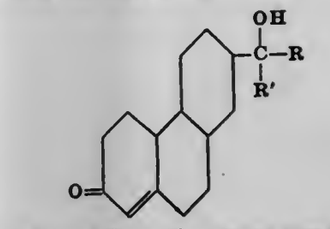
3,275,690

PROCESS FOR THE PRODUCTION OF AROMATIC AMINES WHICH ARE ALKYLATED ON THE NUCLEUS

Rudolf Stroh and Hans Haberland, Leverkusen-Bayerwerk, and Willi Haba, Cologne-Stammheim, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a corporation of Germany

No Drawing. Filed Nov. 1, 1962, Ser. No. 234,865
Claims priority, application Germany, Jan. 22, 1955, F 16,634; July 14, 1955, F 17,936, F 17,937; Aug. 13, 1955, F 18,193; Aug. 24, 1955, F 18,261
24 Claims. (Cl. 260—576)

1. Process for production of nuclearly alkylated aromatic amines, which comprises reacting an olefin selected from the group consisting of aliphatic olefinic hydrocarbon and cycloolefinic hydrocarbon with an aromatic amine selected from the group consisting of primary and secondary aromatic amines at a temperature of about 150–400° C. in the presence of a Friedel-Crafts catalyst.



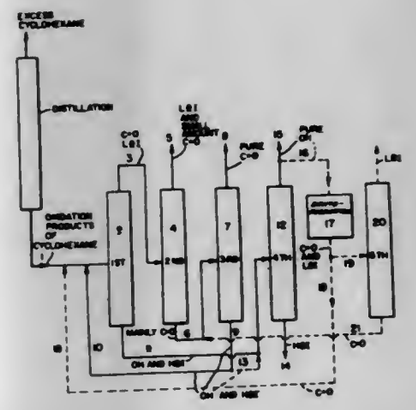
3,275,691

DODECAHYDROPHENANTHRENE DERIVATIVES

Moses Wolf Goldberg and Lester Mischa Jampolsky, Upper Montclair, and Richard Wightman Kierstead, North Caldwell, N.J., assignors to Hoffmann-La Roche Inc., Nutley, N.J., a corporation of New Jersey

No Drawing. Filed Apr. 11, 1962, Ser. No. 186,651
7 Claims. (Cl. 260—586)

1. A compound having the formula



wherein R is selected from the group consisting of hydrogen and lower alkyl and R′ is selected from the group consisting of hydrogen, lower alkyl, vinyl and ethynyl.

3,275,692

RECOVERY OF PURE CYCLOHEXANONE AND CYCLOHEXANOL

Guenter Poehler, Hans Joachim Waldmann, and Hubert Corr, Ludwigshafen (Rhine), Germany, assignors to Badische Anilin- & Soda-Fabrik Aktiengesellschaft, Ludwigshafen (Rhine), Germany

Filed Oct. 21, 1964, Ser. No. 405,387
Claims priority, application Germany, Dec. 16, 1959, B 55,935
5 Claims. (Cl. 260—586)

1. A process for the recovery of pure cyclohexanone and cyclohexanol from oxidation products which have been obtained by oxidation of cyclohexane with a gas selected from the group consisting of oxygen and oxygen-containing gases which comprises distilling off the excess cyclohexane, feeding the resultant composition to a first rectification zone and therein separating said oxidation products into cyclohexanone, minor amounts of cyclohexanol, and impurities having a lower boiling point than cyclohexanone as a first rectification zone overhead and into cyclohexanol and impurities which have a higher boiling point than cyclohexanol as a first rectification zone bottoms at a pressure of 10 to 100 mm. Hg absolute, subjecting said first rectification zone overhead to a rectification in a second rectification zone at a pressure of 300 mm. Hg absolute to 5 atmospheres to separate said first rectification zone overhead into a second rectification

zone overhead consisting mainly of said impurities having a lower boiling point than cyclohexanone and a second rectification zone bottoms consisting mainly of cyclohexanone with minor amounts of cyclohexanol therein, subjecting the second rectification zone bottoms to a rectification at 1 mm. Hg absolute to 5 atmospheres in a third rectification zone to separate said second rectification zone bottoms into pure cyclohexanone as the third rectification zone overhead and said minor amounts of cyclohexanol as the third rectification zone bottoms, and subjecting the first rectification zone bottoms to a rectification in a fourth rectification zone to separate said first rectification zone bottoms into pure cyclohexanol as the fourth rectification zone overhead and said impurities which have a higher boiling point than cyclohexanol as the fourth rectification zone bottoms.

3,275,693

PROCESS FOR PREPARING ORGANIC SULFIDES

Pierre A. Bapsères and Michel Biensan, Pau, France, assignors to Societe Nationale des Petroles d'Aquitaine, Paris, France

No Drawing. Filed Jan. 25, 1963, Ser. No. 253,973
Claims priority, application France, Feb. 5, 1962, 886,954
6 Claims. (Cl. 260—608)

1. A process for the preparation of an organic disulfide selected from the group consisting of dimethyl-, diethyl-, dipropyl-, dibutyl-, di-isobutyl-, diphenyl-, and dicyclohexyl-disulfide, which comprises reacting sulfur, a mercaptan selected from the group consisting of methyl-, ethyl-, propyl-, butyl-, isobutyl-, phenyl- and cyclohexyl-mercaptan and an alkali metal hydroxide in an aqueous solution, in the proportion of 0.5 gram equivalent of said alkali metal hydroxide and 0.5 gram atom of sulfur per mole of said mercaptan.

6. A cyclic process for the production of dimethyl-disulfide, which comprises:

(a) reacting sulfur, methylmercaptan and sodium hydroxide in an aqueous solution, in the proportion of 0.5 gram atom of sulfur and 0.5 gram equivalent of sodium hydroxide per mole of methylmercaptan, at temperatures within the range of from 5° to 30° C. and under pressures of from 1 to 10 atmospheres;

(b) separating the resulting organic liquid layer containing dimethyl-disulfide from said aqueous solution;

(c) adding sodium hydroxide to the residual aqueous solution containing sodium hydrosulfide to convert the same to sodium sulfide;

(d) crystallizing sodium sulfide from said aqueous solution and separating the residual mother liquor therefrom;

(e) dissolving sulfur in said mother liquor and recycling the resulting sulfur-containing aqueous solution to step (a) for further reaction.

3,275,694

PROCESS FOR THE PREPARATION OF AROMATIC MERCAPTO COMPOUNDS

Willi Hahn, Cologne-Stammheim, and Karl Goliasch, Leverkusen-Schlebusch, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a German corporation

No Drawing. Filed July 15, 1963, Ser. No. 295,180
Claims priority, application Germany, Aug. 1, 1962, F 37,482
9 Claims. (Cl. 260—609)

1. Process for the production of an aromatic mercapto compound, which comprises reacting a member selected from the group consisting of mono- and poly-hydroxy compounds, the hydroxy groups of which may be at least in part etherified with a member selected from the group consisting of aliphatic and aromatic substituents and which carry at least one hydrogen atom in a position ortho- or para- to a hydroxy group, further characterized in that they carry no substituent on the aromatic nucleus having a marked ability to attract electrons, with sulphur chlorides and hydrogen sulphide at a temperature of −50 to +200° C., recovering the polysulphide thereby formed and reducing said polysulphide to the mercaptan.

3,275,695

RECOVERY OF BORIC ACID FOR REUSE IN THE OXIDATION OF HYDROCARBONS

Richard L. Marcell, Bergenfield, N.J., assignor to Halcon International Inc., a corporation of Delaware

Filed Dec. 19, 1962, Ser. No. 245,858
4 Claims. (Cl. 260—631)

1. The process which comprises filtering solid ortho-boric acid crystals containing free water from an aqueous borate ester hydrolysis mixture, admixing said crystals in liquid saturated C_4 to C_8 hydrocarbon, dehydrating said ortho-boric acid to meta-boric acid at temperatures in the range of 75 to 300° C., the dehydration of said ortho-boric acid being carried out by stripping free water from the dispersion of ortho-boric acid in saturated C_4 to C_8 hydrocarbon by contact with a gaseous mixture of said saturated C_4 to C_8 hydrocarbon and water, passing the resulting dispersion to a second stage wherein ortho-boric acid is dehydrated to meta-boric acid by contact with a gaseous mixture of saturated C_4 to C_8 hydrocarbon and water and a gaseous mixture of said saturated C_4 to C_8 hydrocarbon and dehydration water is separated, said gaseous mixture from second stage being the said gaseous mixture used to strip free water in said first stage, and passing the resulting dispersion of meta-boric acid in saturated C_4 to C_8 hydrocarbon as feed to a molecular oxygen oxidation.

3,275,696

PROCESS FOR THE PRODUCTION OF CITRONELLOL

Emanuel Goldstein, Paramus, N.J., assignor to Universal Oil Products Company, Des Plaines, Ill., a corporation of Delaware

No Drawing. Filed July 27, 1964, Ser. No. 385,502
1 Claim. (Cl. 260—631.5)

A process for the production of citronellol without substantial formation of dimethyloctanol from a mixture of geraniol and citronellol which comprises subjecting said mixture to reaction with hydrogen in the presence of from about 1% to about 25% by weight of Raney cobalt catalyst resulting from the alkali digestion of aluminum-cobalt alloy, said reaction being at a temperature of from about 25° C. to about 200° C. and a pressure of from about 50 to about 550 pounds per square inch to selectively hydrogenate only the double bond in the 2-position of the geraniol to the substantial exclusion of the double bond in the 6-position of the geraniol, the citronellol in admixture with the geraniol, and the citronellol formed by the reaction, and recovering the citronellol.

3,275,697

PRODUCTION OF TETRACHLOROBENZENES

John W. Churchill and Theodore M. Jenney, Kenmore, N.Y., assignors to Olin Mathieson Chemical Corporation, a corporation of Virginia

No Drawing. Filed Jan. 4, 1954, Ser. No. 402,174
13 Claims. (Cl. 260—650)

1. A flexible process for the production of 1,2,4,-trichlorobenzene and 1,2,4,5-tetrachlorobenzene selectively which comprises selectively chlorinating a mixture consisting essentially of 1,2,3-trichlorobenzene and 1,2,4-trichlorobenzene at a temperature of about 50 to 250° C. to produce a mixture comprising 1,2,4-trichlorobenzene and isomers of tetrachlorobenzene, fractionally distilling the mixture to separate overhead a fraction substantially enriched in 1,2,4-trichlorobenzene and a fraction consisting essentially of a mixture of 1,2,3,4,-tetrachlorobenzene and 1,2,4,5-tetrachlorobenzene, cooling the mixture of 1,2,3,4-tetrachlorobenzene and 1,2,3,4,5-tetrachlorobenzene to a temperature below about 50° C. and separating solid substantially pure 1,2,4,5-tetrachlorobenezene.

3,275,698

DEHYDRATION OF ALCOHOLS

Clyde E. Parish, Houston, Tex., assignor to Signal Oil and Gas Company, Los Angeles, Calif.

No Drawing. Filed Jan. 21, 1963, Ser. No. 252,564
11 Claims. (Cl. 260—666)

1. An improved method of dehydrating alcohol, which method comprises contacting alcohol selected from the group consisting of paraffinic alcohol, cycloparaffinic alcohol and mixtures thereof in a reaction zone with a catalyzing concentration of a mixture of a major proportion of selected polyglycol ether and a minor proportion of selected mineral acid at a dehydration reaction temperature above the boiling point of the dehydration product of said alcohol but below the boiling point of said alcohol, maintaining said contact for a time sufficient to substantially dehydrate said alcohol to the corresponding unsaturated hydrocarbon product, and recovering said product.

3,275,699

RECOVERY PROCESS FOR A CYCLOHEXADIENE

David G. Walker and William R. Edwards, Baytown, Tex., assignors, by mesne assignments, to Esso Research and Engineering Company, Elizabeth, N.J., a corporation of Delaware

No Drawing. Filed Sept. 9, 1963, Ser. No. 307,330
7 Claims. (Cl. 260—666)

1. In the methylation of a methyl-substituted benzene using an aluminum halide as the methylation catalyst wherein a hydrocarbon insoluble phase forms below the hydrocarbon phase, the improvement of:

separating said hydrocarbon insoluble phase from said hydrocarbon phase;

mixing said hydrocarbon insoluble phase with a metal halide wherein said metal of said metal halide is selected from the group consisting of sodium, potassium, calcium and magnesium at a temperature within the range of about 0° to about 50° C. in an aromatic solvent whereby a binary addition compound, a hydrogen halide and 1-methylene-2,3,4,4,5,6-hexamethylcyclohexadiene are formed; and

recovering said 1-methylene-2,3,4,4,5,6-hexamethylcyclohexadiene, said halides being selected from the group consisting of chlorine and bromine.

3,275,700

PREPARATION OF ALKYLADAMANTANES HAVING AN ETHYL SUBSTITUENT

Edward J. Janoski, Havertown, Pa., and Robert E. Moore, Wilmington, Del., assignors to Sun Oil Company, Philadelphia, Pa.

No Drawing. Filed Apr. 13, 1964, Ser. No. 359,401
18 Claims. (Cl. 260—666)

1. Method of preparing alkyladamantanes of the C_{12}–C_{15} range which has an ethyl substituent on the adamantane nucleus which comprises contacting a perhydroaromatic hydrocarbon having three rings and from 12 to 15 carbon atoms at a temperature in the range of 50–200° C. with an HF–BF_3 catalyst, continuing such contact until at least a substantial proportion of the perhydroaromatic has been converted to hydrocarbon product having adamantane structure, whereby alkyladamantane having an ethyl substituent is formed, and stopping such contact before said alkyladamantane has mainly isomerized to polymethyladamantane.

3,275,701

SUBSTITUTED BENZENES

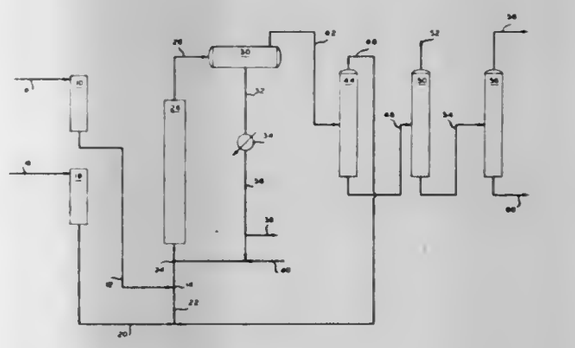
Ernst T. Theimer, Rumson, and Seymour Lemberg, Elizabeth, N.J., assignors to International Flavors & Fragrances, Inc., New York, N.Y., a corporation of New York

No Drawing. Filed Sept. 9, 1963, Ser. No. 307,327
15 Claims. (Cl. 260—668)

15. A process for the preparation of 1,1-dimethyl-6-tert-butyl indane which comprises the steps of

(1) reacting a compound selected from the group consisting of alkali metal phenyls with p-tert-butyl toluene to produce an alkali metal α-p-tert-butyl benzyl;

(2) reacting the thus produced compound with a compound selected from the group consisting of methallyl chloride, bromide and iodide to produce 2-methyl-4-(p-tert-butyl-phenyl)-but-1-ene; and



(3) reacting the thus produced compound with a cyclizing agent.

3,275,702

ALKYLATION

Tom Hutson, Jr., Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Filed Aug. 16, 1963, Ser. No. 302,537
4 Claims. (Cl. 260—671)

1. A process for the preferential alkylation of an aromatic hydrocarbon with an olefinic hydrocarbon in order to achieve predominantly 2-aryl alkanes which comprises introducing said aromatic hydrocarbon and said olefinic hydrocarbon into an alkylation zone at a ratio of about 10:1 to 25:1 in contact with an HF acid catalyst, said catalyst containing from 2 to 4 weight percent based on total catalyst employed, a modifier selected from the group consisting of hydrogen and water, maintaining the resulting

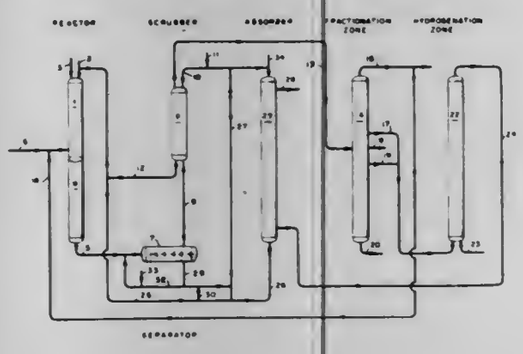
alkylation reaction mixture in said alkylation zone for a time in the range of 0.1 to 4.5 minutes and at a temperature within the range of 40 to 100° F. and thereafter recovering the resulting preferentially formed alkylate as a product of the process.

3,275,703

PROCESS FOR ALKYLATION OF AROMATIC HYDROCARBONS

Alan K. Roebuck, Schererville, Ind., and Bernard L. Evering, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana

No Drawing. Filed Jan. 24, 1964, Ser. No. 339,859
13 Claims. (Cl. 260—671)



1. An alkylation process which comprises contacting under alkylation conditions an aromatic compound having a mono-nuclear aromatic ring, said ring having an open para-position, and a tertiary alkylating compound in the presence of a catalyst system comprising an aluminum halide-ether complex in which there is dissolved an excess of said aluminum halide and at least about one mol, per mol of said excess of said aluminum halide, of a catalyst modifier selected from the class consisting of a sodium halide, a cuprous halide, a silver halide, and mixtures thereof, wherein said catalyst system consists essentially of a single halide selected from the class consisting of chlorides, bromides and iodides, whereby said mono-nuclear aromatic ring is preferentially alkylated in the para-position.

3,275,704

IODINE RECOVERY FROM ORGANIC IODIDES

George Stewart Mill, Pasadena, Tex., assignor to Shell Oil Company, New York, N.Y., a corporation of Delaware

Filed July 16, 1964, Ser. No. 383,087
3 Claims. (Cl. 260—673)

1. In a process for the iodinative dehydrogenation of a first hydrocarbon to at least a second hydrocarbon having a higher carbon-to-hydrogen ratio, wherein the first hydrocarbon and a reactive iodine species are reacted at a temperature in excess of 200° C. in an environment of a metallic base and corresponding metal iodide, whereby a second hydrocarbon and hydrogen iodide are produced, the improvement comprising the recovery of the iodine from resulting organic iodide formed in the reaction zone by

(1) fractionally distilling separated organic product stream containing organic iodide and second hydrocarbon;

(2) catalytically hydrogenating separated fractional cuts containing organic iodides and substantially free from second hydrocarbon under pressure to convert the organic iodides to hydrocarbons and hydrogen iodide;

(3) passing the resulting hydrogenated stream through aqueous lithium hydroxide/lithium iodide solution under pressure and at an elevated temperature to absorb the hydrogen iodide; and

(4) returning the resulting aqueous stream to the iodinative dehydrogenation operation.

3,275,705

DEHYDROGENATION CATALYST

E. O. Box, Jr., Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

No Drawing. Filed June 14, 1965, Ser. No. 463,853
9 Claims. (Cl. 260—683.3)

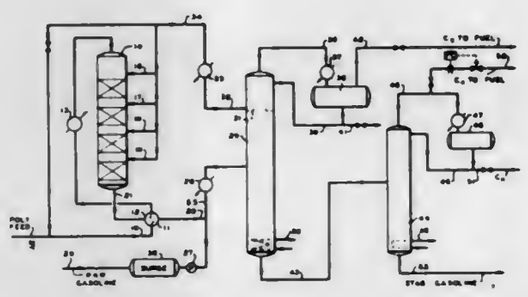
1. A process for the dehydrogenation of a gaseous hydrocarbon selected from the group consisting of propane and ethane and mixtures thereof which comprises contacting the gaseous hydrocarbon at an elevated temperature selected from the range of 1100 to 1500° F. with a cuprous sulfide catalyst.

3,275,706

PROPYLENE DIMERIZATION PROCESS

Paul R. Stapp, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

No Drawing. Filed Dec. 26, 1962, Ser. No. 247,318
6 Claims. (Cl. 260—683.15)



1. A propylene dimerization process which comprises contacting propylene with a catalyst comprising potassium supported on a hydride selected from the group consisting of calcium hydride, sodium borohydride, potassium borohydride, lithium aluminum hydride, and sodium aluminum hydride.

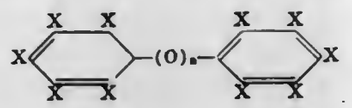
3,275,707

POLYMERIZATION OF OLEFINS

Robert D. Bauer, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

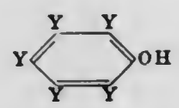
Filed Jan. 3, 1964, Ser. No. 335,472
6 Claims. (Cl. 260—683.15)

1. A combination polymerization and hydrocarbon stream stabilization process, comprising: introducing an olefin-containing hydrocarbon feed stock comprising C_2 to C_6 olefins into a polymerization zone; in said polymerization zone, contacting said feedstock with a polymerization catalyst active for catalyzing polymerization of said olefins to polymers boiling within the gasoline range and which is subject to being deactivated upon contact with free oxygen; introducing a coolant and diluent stream comprising a saturated hydrocarbon into said polymerization zone; withdrawing reaction mixture from said polymerization zone; combining said reaction mixture with a stream of unstabilized mixed hydrocarbons containing free oxygen and saturated hydrocarbons; introducing said combined stream into a fractionation zone at a point intermediate the ends thereof; withdrawing an essentially oxygen-free side stream comprising said saturated hydrocarbon from an upper portion of said fractionation zone; and passing at least a portion of said side stream into said polymerization zone as said coolant stream.



3,275,708

PHENOLIC ADDUCTS OF DIPHENYLOXIDES OR BIPHENYLS, WITH EPOXY RESINS



Harold R. Bylsma, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed Oct. 2, 1961, Ser. No. 142,037
8 Claims. (Cl. 260—830)

1. The resinous composition consisting essentially of the reaction product of (A) a phenolic adduct of (1) a chloromethylated aromatic compound having the formula:

wherein n is 0 to 1, wherein at least one X is CH_2Cl and the other X values are selected from the group consisting of H, CH_2Cl, Cl, Br, R and OR wherein R is alkyl of 1 to 4 carbon atoms and (2) an hydroxylated aromatic compound having the formula:

wherein Y is selected from the group consisting of H, Cl, Br, alkyl, aryl, aralkyl, and a hydroxyaryl, said alkyl containing from 1 to 10 carbon atoms and (B) an epoxy resin in a molar ratio of (B) to (A) of between about 0.5 and about 1.5 in the presence of a catalytic amount of a tertiary amine.

3,275,709

AIR-DRYING POLYESTER RESINS PREPARED FROM TETRAHYDROPHTHALIC ANHYDRIDE AND TRICARBOXYLIC ACIDS

George S. Wooster, Hamburg, and S. Edmund Berger, Tonawanda, N.Y., assignors to Allied Chemical Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed Apr. 27, 1962, Ser. No. 190,788
4 Claims. (Cl. 260—861)

3. A polymerizable unsaturated polyester which comprises the esterification product of: (a) tetrahydrophthalic acid anhydride; (b) fumaric acid; (c) diethylene glycol, and; (d) malic acid, said tetrahydrophthalic acid anhydride providing from about 40 to about 55 equivalents per 100 equivalents of the carboxylic groups present, said malic acid providing about 10 equivalents per 100 equivalents of the carboxylic groups present.

4. A polymerizable unsaturated polyester which comprises the esterification product of: (a) tetrahydrophthalic acid anhydride; (b) fumaric acid; (c) diethylene glycol, and; (d) tris (2-carboxyethyl)isocyanurate, said tetrahydrophthalic acid anhydride providing from about 40 to about 55 equivalents per 100 equivalents of the carboxylic groups present, said tris (2-carboxyethyl)isocyanurate providing about 10 equivalents per 100 equivalents of the carboxylic groups present.

3,275,710

AIR-DRYING LINEAR POLYESTER RESINS

George S. Wooster, Hamburg, and Aloysius J. Kane, Buffalo, N.Y., assignors to Allied Chemical Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed July 30, 1962, Ser. No. 213,137
10 Claims. (Cl. 260—863)

1. An unsaturated linear polyester which comprises the esterification product of (a) about 10 to 75 equivalents per 100 equivalents of total carboxylic acids present of tetrahydrophthalic acid, (b) an alpha-beta unsaturated dicarboxylic component selected from the group consisting of fumaric acid and maleic acid, and (c) a polyol composition which contains at least 80 percent 1,5-pentane diol; there being about 102 to 110 equivalents of polyol per 100 equivalents of carboxylic acids present.

3,275,711

AIR-DRYING LINEAR POLYESTER RESINS

George S. Wooster, Hamburg, N.Y., assignor to Allied Chemical Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed July 30, 1962, Ser. No. 213,157
10 Claims. (Cl. 260—863)

1. An unsaturated linear polyester which comprises the esterification product of (a) about 10 to 50 equivalents per 100 equivalents of total carboxylic acids present of tetrahydrophthalic acid, (b) an alpha-beta unsaturated dicarboxylic component selected from the group consisting of fumaric acid and maleic acid, and (c) a glycol component consisting essentially of diethylene glycol; there being about 102 to 110 equivalents of glycol per 100 equivalents of carboxylic acids present.

3,275,712

PRODUCTION OF IMPACT-RESISTANT THERMOPLASTIC MOLDING MATERIALS

Hans Peter Siebel, Limburgerhof, Pfalz, and Hans-Werner Otto, Ludwigshafen (Rhine), Germany, assignors to Badische Anilin- & Soda-Fabrik Aktiengesellschaft, Ludwigshafen (Rhine), Germany

No Drawing. Filed Dec. 12, 1963, Ser. No. 329,993
Claims priority, application Germany, Dec. 19, 1962, B 70,056
6 Claims. (Cl. 260—876)

3. An impact resistant thermoplastic molding material comprising a uniform mixture of

(a) a copolymer II prepared by polymerizing (1) an elastomeric copolymer I of

(A) 50 to 85% by weight of an acrylic ester having from four to eight carbon atoms in the alcohol component,

(B) 5 to 20% by weight of acrylonitrile, and

(C) 10 to 40% by weight of a vinyl alkyl ether having one to four carbon atoms in the alkyl group, the sum of the percentages being 100, in an aqueous dispersion with (2) styrene and acrylonitrile in the weight ratio 60:40 to 90:10 in an amount of 90 to 10% by weight with reference to the copolymer I; and

(b) a copolymer III of styrene and acrylonitrile in the weight ratio 60:40 to 90:10, in such proportions of components (a) and (b) that the elastomeric copolymer I constitutes 10 to 35% by weight of the resultant uniform mixture.

3,275,713

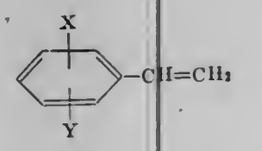
POLYMERIZABLE PLASTISOLS OF VINYL CHLORIDE POLYMERS AND MONOCHLOROSTYRENES

Louis C. Rubens and Demetrius Urchick, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed July 16, 1962, Ser. No. 210,205
21 Claims. (Cl. 260—884)

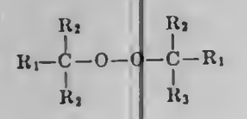
1. A composition of a viscosity-stable dispersion of a vinyl chloride polymer consisting essentially of an intimate mixture of

(a) from about 35 to about 70 weight percent, based on the weight of the composition, of a polymer of a monoethylenically unsaturated monomeric material containing at least about 85 weight percent of vinyl chloride; and,



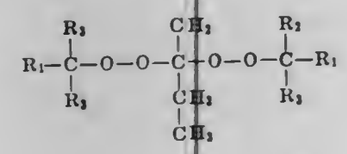
(b) from about 65 to about 30 weight percent, based on the weight of the composition, of a monochlorostyrene.

3,275,714
METHOD AND CATALYSTS FOR CONVERTING VINYL CHLORIDE POLYMER-MONOMER COMPOSITIONS TO POLYMERIC PRODUCTS

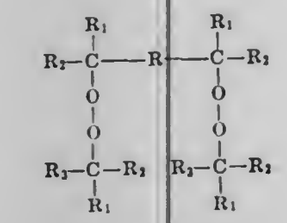


Clifford F. Thompson, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

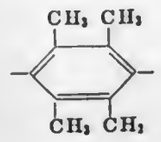
No Drawing. Filed Apr. 1, 1963, Ser. No. 269,741
16 Claims. (Cl. 260—884)



1. In a method of curing a composition comprising an intimate mixture of from 30 to 70 percent by weight of a vinyl chloride polymer containing at least 85 percent by weight of chemically combined vinyl chloride in the polymer molecules and from 70 to 30 percent by weight of a polymerizable liquid consisting of at least a predominant amount of at least one monovinyl aromatic compound having the general formula:



wherein X and Y are independently selected from the group consisting of hydrogen, halogen and alkyl radicals containing from 1 to 4 carbon atoms, and not more than a minor proportion of another ethylenically unsaturated liquid vinylidene compound copolymerizable with said monovinyl aromatic compound, the improvement which consists in carrying out the polymerization of the polymerizable liquid in said composition by heating the mixture at elevated temperatures sufficient to substantially solvate the vinyl chloride polymer with the polymerizable liquid in admixture with from about 1 to 10 percent by weight of a stannous salt selected from the group consisting of a stannous naphthenate and stannous salts of aliphatic monocarboxylic acids containing from 6 to 18 carbon atoms in the molecule, based on the weight of said polymerizable liquid, and a small but effectively synergist proportion of at least one organic peroxide selected from the group consisting of (a) organic peroxides having the general formula



wherein R_1, R_2 and R_3 are independently selected from the group consisting of hydrogen, alkyl and aryl radicals, (b) organic peroxides having the general formula

wherein R_1, R_2 and R_3 have the meaning given above, and (c) organic peroxides having the general formula

wherein R is a divalent hydrogen radical of the formula $—CH_2·CH_2—$, —CH=CH—, —CH≡C—, and

and R_1, R_2 and R_3 have the meaning given above.

3,275,715
PROCESS FOR INCORPORATING ADDITIVES INTO POLYOLEFINS

John M. O'Leary, Jr., Wilmington, Del., assignor, by mesne assignments, to Container Corporation of America, Chicago, Ill., a corporation of Delaware

No Drawing. Filed Dec. 4, 1962, Ser. No. 242,102
8 Claims. (Cl. 260—889)

1. A process for uniformly incorporating a non-gaseous additive into a polyolefin selected from the group consisting of polyethylene and polypropylene which comprises agitating for not more than two hours the powdered polyolefin at a temperature of between 125° F. and 150° F. with a solution of the additive in a solvent which is both a solvent for the additive and which penetrates the polyolefin powder granules and causes them to swell, and with the concentration of said solvent being below that concentration which appreciably dissolves the powdered polyolefin and effects coalescence thereof, namely within the range of ½ to 1 liter of the solution of the solvent and additive per 100 pounds of the polyolefin.

3,275,716
VINYLIDENE CHLORIDE POLYMER COMPOSITIONS AND FILMS THEREFROM

Glenn C. Wiggins, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed July 17, 1962, Ser. No. 210,563
16 Claims. (Cl. 260—899)

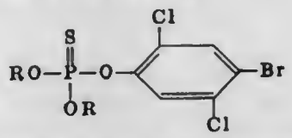
1. A composition comprising, in intimate blended relationship, from about 95 to about 97 weight percent, based on the weight of the composition, of a vinylidene chloride polymer containing from about 70 to about 95 weight percent of vinylidene chloride copolymerized with from about 30 to about 5 weight percent of another monoethylenically unsaturated monomer copolymerizable with vinylidene chloride, and from about 5 to about 3 weight percent based on the weight of the composition, of a vinyl chloride polymer containing from about 80 to about 95 weight percent of vinyl chloride copolymerized with from about 20 to about 5 weight percent of another monoethylenically unsaturated monomeric material copolymerizable with vinyl chloride.

3,275,717
STABILIZER FOR TRIMETHYLPHOSPHATE

Harry S. Butler, Baton Rouge, La., assignor to Ethyl Corporation, New York, N.Y., a corporation of Virginia

No Drawing. Filed Apr. 29, 1963, Ser. No. 276,183
6 Claims. (Cl. 260—963)

1. A mixture comprising trimethylphosphate present in the form of at least a concentrated solution thereof and further comprising minute quantities of water sufficient to form phosphoric acids, containing an amount of a tertiary alkyl amine less than the theoretical amount which would be necessary to neutralize said acids.



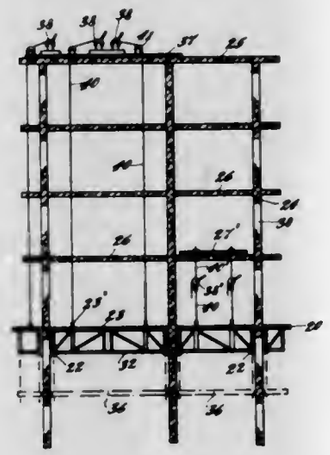
5. Stabilized neat trimethylphosphate containing 0.2 to 1.0 weight percent tri-n-butylamine, said amine being present in less than the theoretical amount which would be necessary to neutralize any acids present.

3,275,718
O,O-DIALKYL-O-(2,5-DICHLORO-4-BROMO-PHENYL)-THIOPHOSPHATES

Richard Sehring and Karl Zeile, Ingelheim (Rhine), Germany, assignors to C. H. Boehringer Sohn, Ingelheim (Rhine), Germany, a limited partnership of Germany

No Drawing. Original application Nov. 6, 1964, Ser. No. 409,552, now Patent No. 3,227,610, dated Jan. 4, 1966. Divided and this application Oct. 22, 1965, Ser. No. 502,302
Claims priority, application Germany, Nov. 30, 1961, B 64,999
3 Claims. (Cl. 260—964)

1. A compound of the formula

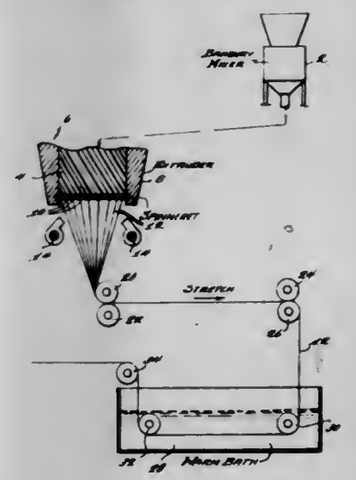


wherein R is selected from the group consisting of methyl and ethyl.

3,275,719
METHOD OF BUILDING IN SITU CONSTRUCTION USING SEQUENTIAL MOLDING TECHNIQUES

Brian H. Dudson, Philadelphia, Pa. (Box 5722, Wellesley St., Auckland, Auckland, New Zealand)

Filed Aug. 7, 1963, Ser. No. 300,476
2 Claims. (Cl. 264—33)



1. A method of making a concrete building, which comprises setting up at the building site a construction platform comprising vertical forms for side walls of the building and horizontal forms for floors, building side walls of concrete contained within the vertical forms, leaving openings at spaced intervals extending through the walls as they are formed, placing support platforms through these openings in the walls, supporting the construction platform and raising it after the concrete has cured from beneath the platform by jacking means resting on and applying load to said platforms, pouring the side walls continuously until the desired top is reached, then pouring a floor using the horizontal forms, lowering said construction platform after the concrete cures and supporting it with the same jacking means by again applying load to the support platforms to the level of the next succeeding floor desired, pouring said floor and successive ones downwardly by lowering the platform each time, until the lowermost floor is reached, wherein the lifting and lowering of the construction platform is accomplished by a series of jacking means, which comprises supporting the building platform by a first jacking means applying load to a support platform, moving said building platform with the jacking means to a desired level, subsequently shifting support of the building platform to a second jacking means applying load to another support platform for support and movement of the building platform to the next desired level, and repositioning said first jacking means on yet another support platform for acceptance of successive support and movement of the building platform after movement by the second jacking means.

3,275,720
METHOD OF EXTRUDING FOAMED FIBERS HAVING OUTER SKINS INTEGRAL THEREWITH

Ernest O. Ohsol, Wilmington, Del., assignor, by mesne assignments, to Haveg Industries, Inc., a wholly-owned subsidiary of Hercules Powder Company, New Castle, Del., a corporation of Delaware

Filed Apr. 30, 1963, Ser. No. 276,708
9 Claims. (Cl. 264—48)

1. A process of preparing a fiber of a thermoplastic resin foam comprising extruding a fiber of a foamable thermoplastic resin, quenching the surface only of said fiber below the foaming temperature while permitting fiber to expand to a density of between 14 and 45 lbs./cu. ft. whereby there is produced a fiber having a foamed resin core and an impervious outer skin integral with said core, the cooling being sufficient that 50 to 95% of the diameter of said fiber is the foamed core and the balance is said skin and drawing said fiber to orient it longitudinally.

3,275,721
METHOD OF CASTING AND FIRING A LAYERED CERAMIC ARTICLE

Pierre Leroy, Saint-Germain-en-Laye, and Roger Simon, Boutheon, France, assignors to Compagnie des Ateliers et Forges de la Loire (St. Chamond-Firminy-St. Etienne-Jacob-Holtzer), Paris, France

No Drawing. Filed Oct. 18, 1965, Ser. No. 497,446
Claims priority, application France, Apr. 18, 1962, 894,916, Patent 1,344,240
6 Claims. (Cl. 264—60)

1. A process for the production of a refractory structure which comprises preparing a porous homogeneous admixture (A) by homogeneously admixing (1) an aggregate of refractory material of a particle size ranging from about 0.3 mm. to about 2.0 mm. and having a sintering temperature of at least about 1150° C., (2) refractory ceramic binder which maintains the particles of the mix in coherent state below said temperature, and (3) an oxidizable metal powder uniformly distributed throughout said mix, preparing a non-porous admixture (B) by homogeneously admixing (1) an aggregate refractory material, at least 20% by weight of said material being less than about 0.2 mm. with the remainder of said refractory material having a particle size of 0.2 mm. to about 1 mm., and (2) a refractory ceramic binder which maintains the particles of the mix in coherent

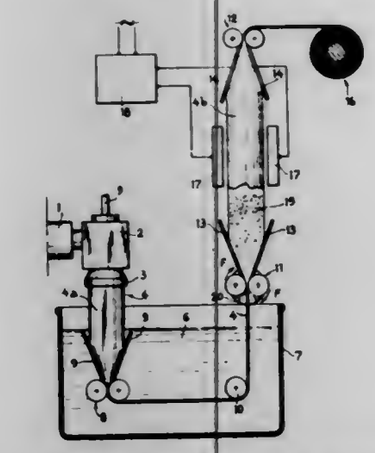
state, casting admixture A into a shaped porous structure, and, substantially simultaneously, casting admixture B to provide rigid wall surrounding A on between three to five sides and, providing at least one orifice in one of the rigid walls opposite to the side of A which is not covered by B, subjecting the shaped article to heating below said sintering temperature but sufficient to set said binder, and then firing the structure in a firing zone at said sintering temperature while blowing a stream of oxidizing gas from a source remote from said zone through said orifice and thence into the interior of the porous structure, whereby said metal powder throughout the porous structure is oxidized, thereby creating a multiplicity of point heat-sources throughout the porous structure and ensuring that particles of sinterable aggregate throughout said porous structure are effectively sintered.

3,275,722

PRODUCTION OF DENSE BODIES OF SILICON CARBIDE

Paul Popper, Westlands, Newcastle-under-Lyme, England, assignor to Power Jets (Research & Development) Limited, London, England, a British company

No Drawing. Filed July 8, 1959, Ser. No. 825,666
1 Claim. (Cl. 264—65)



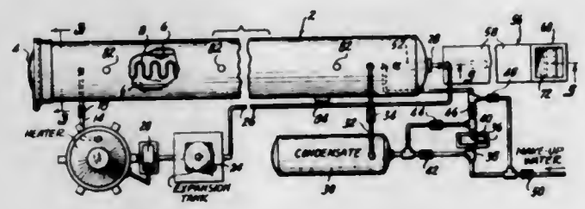
A process for producing a dense self-bonded body of silicon carbide which includes forming a body of densely packed granular silicon carbide and powdered carbon from a homogeneous mixture of granular silicon carbide, powdered carbon and a temporary binder, and heating the body in vacuo to 1500° C. in the presence of a vapour consisting essentially of silicon to eliminate the binder and to reaction-sinter the silicon carbide, carbon and silicon whereby the body is converted substantially exclusively into self-bonded silicon carbide.

3,275,723

PROCESS AND APPARATUS FOR MANUFACTURING TUBULAR FILMS OF SYNTHETIC THERMOPLASTIC MATERIALS

Vittorio E. Cappuccio, Milan, Italy, assignor to Montecatini Societa Generale per l'Industria Mineraria e Chimica, Milan, Italy

Filed June 9, 1964, Ser. No. 373,767
Claims priority, application Italy, June 20, 1963, 13,073/63
9 Claims. (Cl. 264—70)



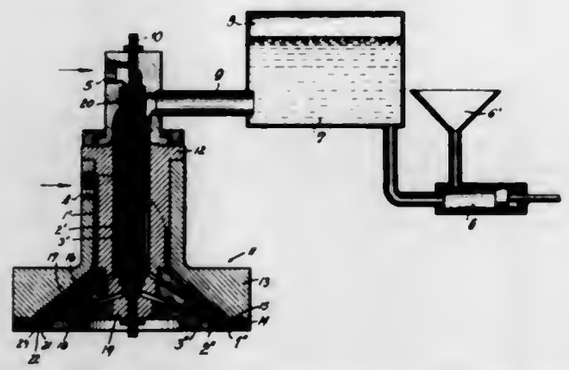
1. In a process of manufacturing a tubular film of a synthetic thermoplastic material, comprising extruding a film tubing of said material in a heat-softened condition into a quenching liquid bath and pulling said film through said bath in collapsed condition, the improvement comprising pulling the quenched film tubing outside the bath in an upward substantially vertical direction, forming and maintaining a spatially stationary bubble of said tubing extending in said direction, while extruding and pulling the tubing, and applying to said bubble a vibratory field directed substantially transversely to said direction to thereby dislodge any droplets of liquid from the inner surface of the bubble and collect them in a bottom section of the latter.

3,275,724

METHOD OF AUTOCLAVING CONCRETE BLOCKS

John B. Klingel, Titusville, Pa., assignor to Struthers Scientific and International Corporation, New York, N.Y., a corporation of Delaware

Continuation of application Ser. No. 300,129, Aug. 2, 1962, which is a division of application Ser. No. 37,343, June 20, 1960. This application Apr. 2, 1965, Ser. No. 445,181
7 Claims. (Cl. 264—82)



1. A method of autoclaving articles adapted to undergo chemical transformation upon subjection thereof to high temperatures and pressures, comprising the steps of:
(1) supporting said articles out of contact with liquid water within a closed chamber provided therein with a reservoir of water;
(2) heating by indirect heat within the chamber and thereby vaporizing at least a portion of said water for the development of steam pressure within said chamber and for the effecting of chemical transformation of said articles;
(3) relieving said steam pressure within said chamber; and
(4) maintaining any unvaporized portion of said water against substantial loss of heat.

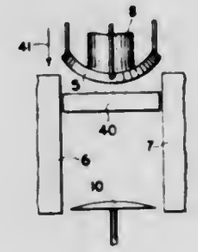
3,275,725

METHOD OF MAKING LAMINATED TUBING

Kastulus Utz, Freising, Upper Bavaria, Germany, assignor, by mesne assignments, to Multifol Patentverwertungs-A.G., Chur, Switzerland

Filed Sept. 19, 1962, Ser. No. 224,764
1 Claim. (Cl. 264—95)

A method of producing thin-walled laminated tubing which comprises:
(a) simultaneously extruding at least a first and second substantially tubular formation of expandable, thermoplastic, synthetic resin composition while at an extrusion temperature at which said compositions are in a condition of plasticity,



(1) said first formation defining a cylindrical space and being spacedly surrounded by said second formation,
(2) said first and second formations defining a substantially annular space therebetween;
(b) feeding molten metal into said annular space;
(1) the solidification temperature of said metal being lower than the solidification temperatures of said compositions and lower than said extrusion temperature;
(c) admitting a fluid expanding medium to said cylindrical space under pressure until the outer face of said first formation adheres to said metal, and said metal adheres to the inner face of said second formation, whereby a tubing having three laminae is formed; and
(d) allowing said tubing to solidify.

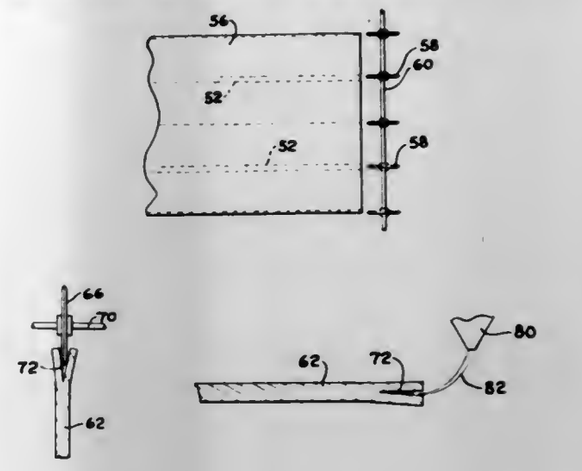
3,275,726

METHOD OF AND APPARATUS FOR BLOW MOLDING LARGE HOLLOW BODIES

Martin Rudolph, 42 Schwanenstr., Velbert, Germany

Filed Feb. 18, 1963, Ser. No. 259,103
Claims priority, application Germany, Feb. 24, 1962, R 32,167; May 16, 1962, R 32,712
12 Claims. (Cl. 264—98)

1. A method of producing large-capacity receptacles from an extrudable plastically deformable material, comprising the steps of extruding a tube of said material generally downwardly; closing the free lower extremity of said tube while imparting thereto a downward convexity by sealing said lower extremity along a downwardly convex arcuate seam; supporting the closed extremity of said tube upon an upwardly convex platform while continuing the extrusion thereof to limit thinning of the tube walls; introducing an expansion fluid under relatively low pressure into the closed tube simultaneously with the extrusion thereof; and subsequently enclosing said tube within a generally cylindrical mold cavity with said platform defining the bottom of said cavity while blow molding said tube with an expansion fluid under relatively high pressure to impart thereto the configuration of said cavity.



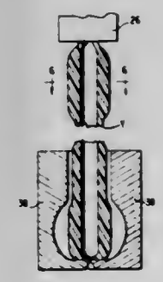
3,275,727

METHOD OF FORMING SLOTTED PANELS

Charles L. Irvin, Neshanic, N.J., assignor to Johns-Manville Corporation, New York, N.Y., a corporation of Delaware

Filed Jan. 16, 1963, Ser. No. 251,888
18 Claims. (Cl. 264—146)

1. A method of forming slotted composition panels, comprising the steps of:
(a) forming a composition sheet to partial thickness,
(b) applying at least one stripe of parting agent to the partially built-up composition sheet,
(c) completing the formation of said sheet to final thickness,
(d) severing the sheet along the stripe to form panel units, each with a parting line along one edge thereof,
(e) separating the faces of the panel units along the parting lines thereof to form slots, and



(f) depositing material into the slots to maintain the faces separated.

3,275,728

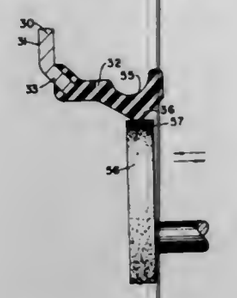
PARISON SEVERING METHOD

Lawrence A. Martino, New Britain, Conn., assignor to Monsanto Company, St. Louis, Mo., a corporation of Delaware

Filed Dec. 4, 1962, Ser. No. 242,126
7 Claims. (Cl. 264—150)

1. A method of severing a tubular formation of plastic material being extruded through an extrusion outlet, said method comprising:
applying an initial pressure to a mass of plastic material to initiate its flow through a cavity communicating with an extrusion outlet;
selectively reducing the pressure at which material is extruded through said outlet so as to reduce the wall thickness of a selected portion of an extruding formation whereby a prior extruded portion of said formation may be disengaged by tearing; and
exerting a force on said formation of plastic material so as to tear the portion extruded prior to said pressure reduction from the portion extruded subsequent thereto.

3,275,729



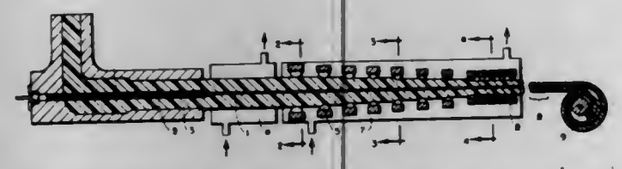
METHOD OF MAKING ELASTOMERIC SEAL

Henry Kingsley Pohlman, Atherton, Calif., assignor to Federal-Mogul Corporation, a corporation of Michigan

Original application Sept. 24, 1962, Ser. No. 225,586. Divided and this application Feb. 8, 1965, Ser. No. 440,978
6 Claims. (Cl. 264—162)

1. A method of making a shaft seal comprising molding a lip from synthetic elastomer to provide a sharp lip edge

bounded by oppositely inclined frusto-conical faces, and abrasively conditioning the sealing lip by grinding off



said lip edge while said elastomer is in an elastic state, thereby improving the sealing performance of said shaft seal.

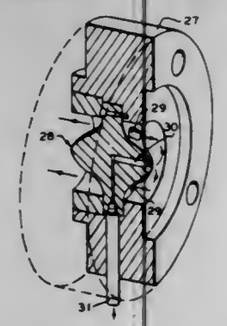
3,275,730

METHOD AND APPARATUS FOR ORIENTING AN EXTRUDED POLYMERIC WIRE COATING

George B. Feild, New Castle, Del., assignor to Hercules Incorporated, a corporation of Delaware

Filed Dec. 24, 1962, Ser. No. 246,739
11 Claims. (Cl. 264—174)

1. The method of continuously applying an oriented polymeric coating to a wire which comprises drawing the said wire through an axially bored wire coating die and extruding a sheath of a molten orientable thermoplastic polymer around and in contact with the wire, adjusting the temperature of the polymer to a range within which the polymer is solid but soft enough to permit the wire to be drawn through the said polymer and thereafter passing the coated wire through a series of radial ball bearings of gradually diminishing internal diameter to effect orientation of the polymer.



8. The process of claim 1 wherein the coated wire is passed through a series of polishing bearings of the same internal diameter immediately following the series of radial ball bearings of gradually decreasing diameter.

3,275,731

MATERIAL BLENDING

Edward J. Kosinsky, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Filed Jan. 25, 1963, Ser. No. 253,925
5 Claims. (Cl. 264—176)

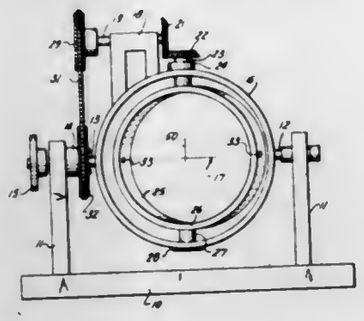
1. The method of adding a first material to a thermoplastic material, which method comprises passing the thermoplastic material in a molten condition through an elongated confined zone in a first direction axially of said confined zone, and introducing the first material into said confined zone at a point on the axis thereof, said first material being introduced in a direction axially of said confined zone and opposite said first direction so that said first material is mixed with said thermoplastic material and thereafter flows with said second material through said confined zone past said point.

3,275,732

PROCESS FOR PREPARING THICK AND THIN NOVELTY YARNS

Roderick Bruce Macleod and Paul Paliyenko, Shelby, N.C., assignors to Fiber Industries, Inc., a corporation of Delaware

No Drawing. Filed July 5, 1963, Ser. No. 293,182
8 Claims. (Cl. 264—290)



1. A process for producing polymethylene terephthalate yarn having randomly spaced thick and thin sections which comprises drawing undrawn polymethylene terephthalate yarn having a birefringence from about 0.0005 to about 0.009 from about 2.8 to about 3.5 times its original length, at a temperature of said undrawn yarn in the range from about 30° C. to the second order transition temperature of said undrawn yarn, at drawing speeds in the range from about 1100 to about 1600 feet per minute.

3,275,733

PROCESS FOR THE PRODUCTION OF HOLLOW ARTICLES OF POLYMERIZED LACTAMS

Elmer C. Schule, Parsippany-Troy Hills, and Herbert J. Pike, Jr., Basking Ridge, N.J., assignors to Allied Chemical Corporation, New York, N.Y., a corporation of New York

Filed Jan. 2, 1963, Ser. No. 248,996
4 Claims. (Cl. 264—310)

1. A process for the production of hollow articles of polymerized lactams, which process comprises producing in a hot mold cavity a liquid polymerizable charge having a temperature at least 40° C. lower than the temperature of the mold, which charge contains (1) a metal lactam catalyst, in which the lactam has the formula:

wherein *n* is an integer from 2 to 12 and the metal is from the group consisting of alkali metals and alkaline earth metals; (2) a symmetrical triazine having a replaceable substituent on at least one of the ring carbon atoms of the triazine; and (3) a lactam having the said formula; maintaining anhydrous conditions in the mold cavity, rotating the mold about a pair of axes angularly disposed with respect to each other at angular velocities at which the resulting centrifugal forces are below the force of gravity, while heating the mold cavity to a temperature within the range of 130° C. to 215° C., to repeatedly wash the walls of the mold cavity with said polymerization charge to build up successive layers of the lactam polymer on the said walls and produce a cast article of polylactam polymer conforming to the shape of the walls of the mold cavity; and removing said article from the mold.

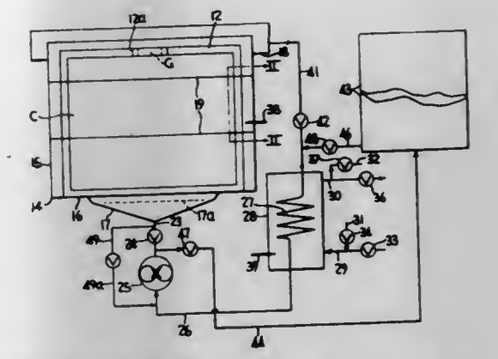
3,275,734

METHOD OF CASTING SHEET-LIKE ARTICLES

Ronald R. Rabenold, Allison Park, Pa., assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Aug. 22, 1961, Ser. No. 133,230
1 Claim. (Cl. 264—316)

The method of forming a sheet-like casting of a heat-polymerizable, resin-forming liquid comprising a monomer having a $CH_2{=}C<$ group and a polyester of an alpha,beta-ethylenically unsaturated dicarboxylic acid which in curing is subject to exothermal rise of temperature and to a substantial degree of shrinkage, said method comprising the steps of:



(A) providing a pair of plate-like elements of a material resistant to the resin-forming liquid and being spaced to give desired thickness to the casting,

(B) sealing the space between the edges of the plate-like elements with flexible, water resistant, heat resistant, pressure-sensitive tape whereby to form a casting cell wherein the plate-like elements are allowed freely to approach each other to follow the shrinkage of the heat-polymerizable material as it polymerizes,

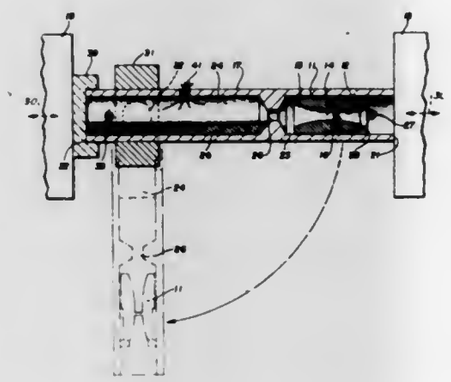
(C) disposing the casting cell substantially in vertical position and filling the space between the plate-like elements with the resin-forming liquid,

(D) introducing heat transfer liquid about the cell while the latter is in said vertical position at a rate substantially corresponding to the rise of the resin-forming liquid in the cell, to attain a substantial balance of hydrostatic pressure between the inner and outer faces of the plate-like elements while the space between the latter elements is being filled,

(E) maintaining the heat transfer liquid in circulation in contact with the surfaces of the plate-like elements

of the cell while maintaining the temperature of the heat transfer liquid at a value for obtaining the desired polymerization temperature in the polymerizable liquid, and

(F) allowing the plate-like elements substantially freely to follow the shrinkage of the material in the cell as it polymerizes.



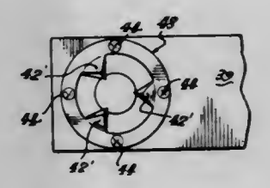
ELECTRICAL

3,275,735

APPARATUS FOR FORMING HIGH TEMPERATURE RESISTANT MEMBER

Ralph L. Abos, Los Angeles, Calif., assignor to Polycarbide Corporation, a corporation of California

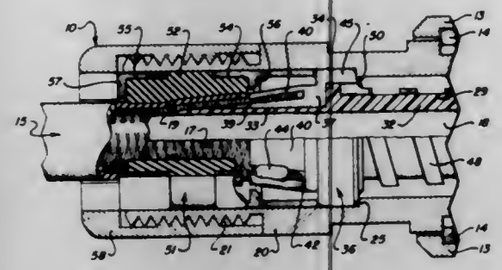
Original application Oct. 3, 1960, Ser. No. 59,893. Divided and this application Dec. 4, 1961, Ser. No. 159,475
6 Claims. (Cl. 13—25)



1. An apparatus of the character described comprising a graphite crucible formed with an interior chamber having a discharge opening disposed above the bottom of said chamber in a first position of said crucible and disposed at the lower end of said chamber in a second position of said crucible, pivotal supporting means connected eccentrically to said crucible to provide an automatic pendulent movement from said first position to said second position, and electrodes moveable into engagement with said crucible in said first position and supporting said crucible therein for the heating of material in said chamber and being retractable to release said crucible for movement to said second position for discharge of molten material therefrom.

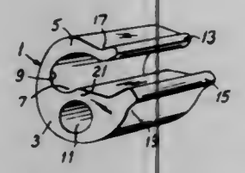
3,275,736

APPARATUS FOR INTERCONNECTING ELEMENTS



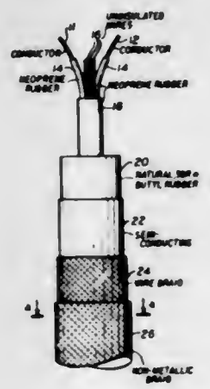
William Hotine, Idyllwild, and Guy F. Maxwell, Glendora, Calif., assignors to General Dynamics Corporation, Pomona, Calif., a corporation of Delaware

Filed Apr. 12, 1965, Ser. No. 447,362
9 Claims. (Cl. 174—84)



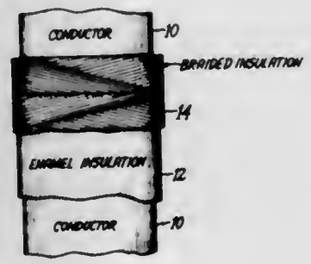
1. A device for electrically and mechanically interconnecting components comprising a conductor member having at least one opening therein and at least one replaceable connector unit removably secured over an opening of said conductor member, said connector unit being provided with an aperture in alignment with said conductor member opening and at least one finger-like element extending into said aperture, said finger-like element being provided with a pointed end extending at an angle with respect to the plane of said conductor member, said replaceable connector unit being electrically and mechanically secured to said conductor member, whereby the finger-like element is adapted to mechanically retain an associated component within said aperture and prevent the removal of the associated component from within the connector unit and the opening of the conductor member due to the pointed end of said finger-like element embedding into such associated component, and whereby the replaceable connector unit may be removed from said conductor member and replaced should said finger-like element be damaged during removal of the associated component from within said aperture of said connector unit.

3,275,737
COAXIAL CABLE TERMINATING MEANS
James M. Caller, Albuquerque, N. Mex., assignor, by mesne assignments, to the United States of America as represented by the United States Atomic Energy Commission
Filed Apr. 15, 1964, Ser. No. 360,153
3 Claims. (Cl. 174—89)



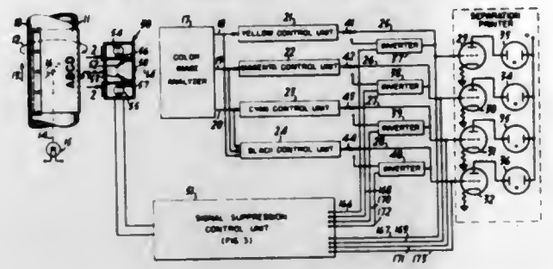
1. In an electrical connector, a coaxial cable having an inner conductor, an outer conductor encircling the inner conductor and spaced therefrom by dielectric means, a retaining and connecting member for said outer conductor including a pair of circumferentially disposed and radially spaced apart inner and outer skirt portions connected by an end wall portion with said portions together forming a slot, an end section of said outer conductor seated in said slot between the skirt portions, the outer skirt portion being inwardly deflected and clamping said end section of the outer conductor between said skirt portions, deformable sealing means in close proximity to an outer periphery of said inner skirt portion, a tubular insulator circumferentially disposed between said outer conductor and said dielectric means at a location radially inwardly of said inner skirt portion and said end section of the outer conductor, and housing means enclosing said retaining member and said sealing means and constricting the latter to firm engagement with said outer conductor.

3,275,738
CABLE CONNECTOR WITH CRIMPING DIE LOCATING GROOVES
Gordon L. Flynn, Trussville, and Benjamin E. Kidd III, and Vernon E. Peek, Birmingham, Ala., assignors to Anderson Electric Corporation, Leeds, Ala., a corporation of Alabama
Filed Apr. 30, 1964, Ser. No. 363,932
9 Claims. (Cl. 174—94)



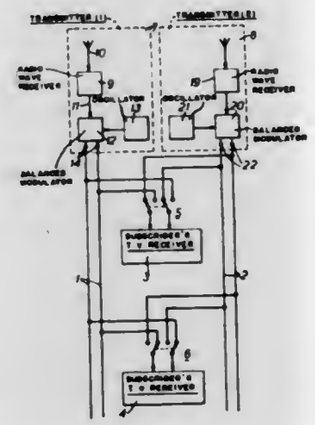
1. A connector for interconnecting a pair of cables comprising a main body portion and a jaw portion extending from one edge of the body portion and forming a relatively deep channel opening laterally of the connector, said main body and jaw portions being integrally formed of a malleable metal in a generally C-shaped configuration in transverse cross section, said channel extending in an axial direction throughout the length of said connector for receiving one of said cables, a bore in said body portion extending parallel to said channel throughout the length of said connector for receiving the other of said cables, said connector having a pair of die-receiving grooves in its periphery located on opposite sides of the lateral opening of said channel and extending in an axial direction throughout the length of the connector for orienting two dies of a four-die crimping tool, said grooves being generally located on two corners of a square all the corners of which are substantially located on the periphery of the connector in a plane substantially perpendicular to the axis of the connector, and a wall between said channel and said bore which is of such a thickness that it is readily deformable under the pressure of said dies necessary to effect crimp connection.

3,275,739
X-RAY AND DIATHERMY CABLE
George S. Eager, Jr., Upper Montclair, N.J., assignor to General Cable Corporation, New York, N.Y., a corporation of New Jersey
Filed Aug. 31, 1964, Ser. No. 393,821
11 Claims. (Cl. 174—107)



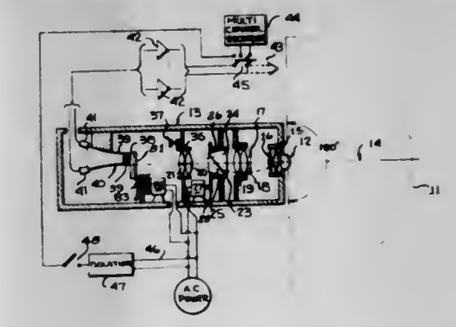
1. A flexible cable for X-ray and diathermy and similar equipment including two or more flexible, metal, electrical conductors; neoprene rubber surrounding one or more of these conductors serving as an insulation, and a secondary neoprene layer serving the function of a semi-conducting covering; a layer of high-grade electrical insulation which is a rubber insulation based on material from the group consisting of natural, SBR and butyl rubber covering the circumferential extent of the neoprene rubber; a semi-conducting layer over said high-grade electrical insulation; and a protecting covering over the semi-conducting layer.

3,275,740
HIGH TEMPERATURE INSULATION FOR ELECTRICAL CONDUCTORS
Willard F. M. Gray, Hancock, Mass., assignor to General Electric Company, a corporation of New York
Filed July 9, 1962, Ser. No. 208,470
5 Claims. (Cl. 174—121)



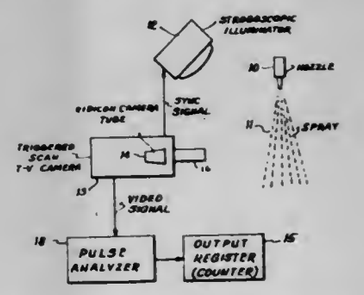
1. An electrical conductor having an insulating coating providing a low dissipation factor and high electrical strength consisting of a base coating of enamel material on said conductor with a porous coating of high temperature resistant filamentary material covering said base coating, the pores of said porous coating measuring not more than 3 mils in at least one dimension.

3,275,741
KNOCKOUT MASK DETECTOR IN SCANNER APPARATUS
Roy H. Hughes, Church Crookham, and Ronald F. Channing, London, England, assignors to Time Incorporated, New York, N.Y., a corporation of New York
Filed May 15, 1963, Ser. No. 280,544
13 Claims. (Cl. 178—5.2)



1. In image reproducing apparatus including scanning means for scanning an original brightness image point by point to produce a beam of light containing image brightness information and reproducing means responsive to the beam of light to produce signals representing a corresponding brightness image point by point and including printer means responsive to the signals to generate corresponding brightness image point by point and including means for detecting an extreme brightness condition in the beam of light, and control means responsive to the detecting means for causing the printer means to produce an extreme brightness condition in the corresponding area of the reproduced image, said control means including signal suppression means responsive to detection of an extreme brightness condition by the detector means to suppress signals representing brightness variations and thereby prevent the printer means from reproducing variations in brightness.

3,275,742
WIRED BROADCASTING SYSTEMS AND APPARATUS THEREFOR
Kenneth Charles Quinton, Hinchley Wood, Esher, Surrey, and Daniel Henry Smart, Coulsdon, Surrey, England, assignors to Communications Patents Limited
Filed May 22, 1963, Ser. No. 282,333
Claims priority, application Great Britain, May 30, 1962, 20,749/62
5 Claims. (Cl. 178—5.2)

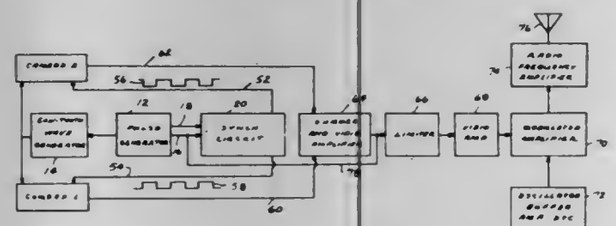


1. In a wired broadcasting system pertaining to color television, which includes a transmitting apparatus serving to energize a conductive network of the system by producing and applying to said network a modulated carrier wave brightness information component and a suppressed carrier wave color information component, the frequencies of said carrier waves differing from each other by an odd multiple of half the line scanning frequency, said system further including frequency control means for establishing the frequency of the carrier wave of the brightness information component at a whole multiple of the line scanning frequency, the beating of these carrier waves and their harmonics thereby occurring at frequencies which differ from the fundamental frequencies of said carrier waves by an odd multiple of half the line scanning frequency of the television signals to reduce the visible effect of such beating in a picture produced with the aid of said components.

3,275,743
WIDE ANGLE TELEVISION SYSTEM UTILIZING OPTICAL FIBERS
John E. Conant, Arlington, Va., assignor to Melpar, Inc., Falls Church, Va., a corporation of Delaware
Filed Dec. 17, 1963, Ser. No. 331,248
12 Claims. (Cl. 178—5.2)

1. A wide angle television system, comprising a camera pickup device having an optical axis; said camera pickup device including, along said optical axis: lens means for forming a real image of a scene, encompassed in a wide angle field of view, to be televised by said system; means for rotating said image about said axis; an array of optical waveguide elements disposed in light-receiving relationship with said image-rotating means, each having its light-receiving end disposed at a different point along a radial line normal to and extending from said axis to a point adjacent the periphery of the rotating image, whereby to simultaneously transmit light rays constituting contiguous elements of a lineal portion of said rotating image, a sequence of such lineal portions for a complete rotation of the image constituting the total image during a given interval of time; and photodetector means for converting light rays transmitted by each optical waveguide element to a respective electrical signal proportional to light ray intensity, to generate parallel signals containing the video information in a lineal portion of the total image.

3,275,744
APPARATUS FOR SPRAY ANALYSIS
Verne E. Dietrich, Naperville, Ill., assignor to Spraying Systems Co., Bellwood, Ill., a corporation of Illinois
Filed Oct. 1, 1962, Ser. No. 227,190
5 Claims. (Cl. 178—6)



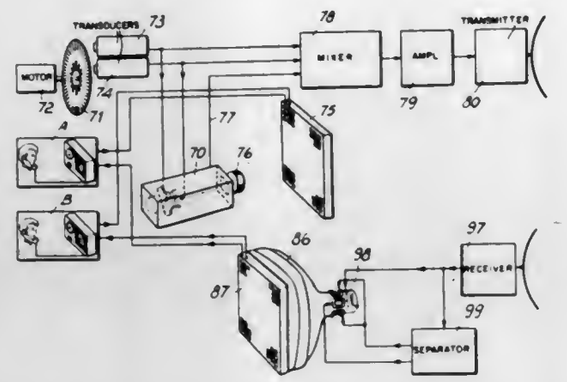
1. Apparatus for spray analysis comprising a television camera having a camera tube and a scanning system therefor, said camera being positioned to view at least a por-

tion of the spray to be analyzed, a stroboscopic light source operative when triggered to emit a short-duration light flash momentarily illuminating said spray portion, means interconnecting said scanning system and said light source operative to synchronize the triggering of said source and the initiation of a scanning cycle in said camera, means for triggering said light source and initiating a scanning cycle in synchronism therewith, whereby an image representing the spray pattern at the instant of said flash is recorded by said camera tube and then converted to a video signal by said camera, and means fed by the camera for analyzing said video signal and thereby recovering information concerning said spray pattern.

3,275,745
THREE-DIMENSIONAL TELEVISION SYSTEM

Robert E. Var, 216 Emerald Ave., New Brighton, Minn.

Filed Dec. 23, 1963, Ser. No. 332,342
6 Claims. (Cl. 178—6.5)



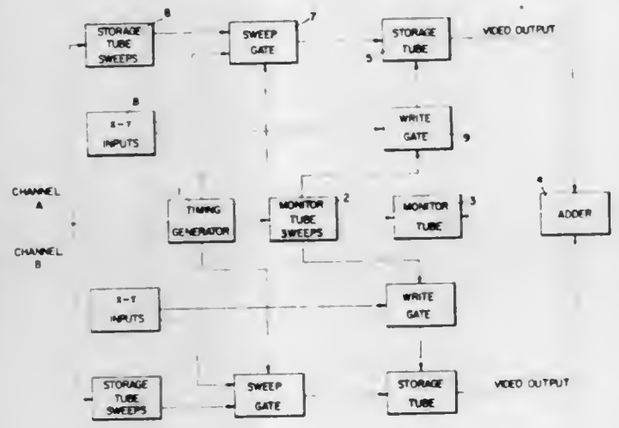
2. A three-dimensional television transmission system comprising in combination a right and a left television camera, a circuit means wired to each of said cameras, each of said cameras being adapted to produce an A and B transmission field, said circuit means being adapted to distinguish between the A and B transmission fields produced by each camera and means for blanking out the signal from each camera in alternate sequence corresponding to the presentation of the respective transmission fields whereby one camera transmits only field A and the other only field B and a picture tube with a first polarizing means for polarizing the light in different planes from portions of the picture displayed on the tube and a second polarizing means for polarizing light in a different plane for each eye of the viewer.

3,275,746
SIMULTANEOUS MULTIPLE TWO-WAY MULTIPLEX COMMUNICATIONS SYSTEMS

Aurelio Beltraml, Via Circo 4, Milan, Italy

Filed Feb. 19, 1963, Ser. No. 259,561
Claims priority, application Italy, Dec. 11, 1962, 29,815
1 Claim. (Cl. 178—6.8)

In a simultaneous multiple two-way multiplex communication system for the transmission of intelligence, a system comprising a plurality of subscriber stations including transmitting and receiving equipments, an exchange for each group of subscribers with the capacity for transmitting and receiving signals from the remaining exchanges, said exchanges further comprising a transmitting honeycomb device with which each exchange subscriber is connected, a vertical and a horizontal stripe on each said transmitting honeycomb device, said honeycomb device comprising a plurality of cells arranged in rows and columns, a gas lamp in each said cell, a camera tube for scanning said honeycomb device and for producing line and frame frequency signals from said stripes, an amplifier connected to said camera tube, a transmitter connected to said amplifier for propagating signals to each of the other exchanges, a receiver for receiving signals from each of said other exchanges, a receiving cathode ray tube device, a receiving honeycomb device affixed to said receiving tube and connected to the several subscriber equipments, said receiving honeycomb device

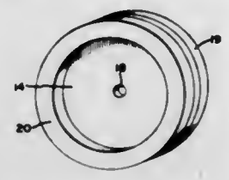


including a plurality of cells, a phototransistor in each said cell, and amplifiers connected between each said receiving honeycomb cells and said subscriber equipment.

3,275,747
ELECTRONIC PLOTTER UTILIZING STORAGE TUBES

Roger Leland Hall, Francestown, N.H., assignor to Sanders Associates, Inc., Nashua, N.H., a corporation of Delaware

Filed May 21, 1963, Ser. No. 281,993
7 Claims. (Cl. 178—6.8)

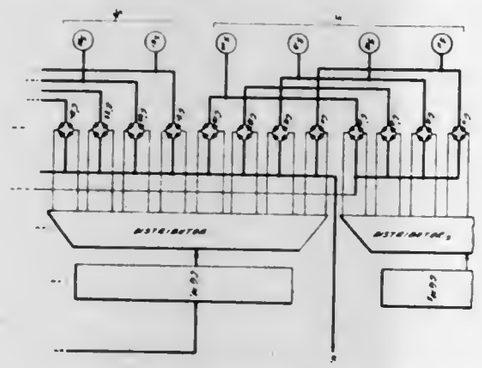


1. An electronic display system comprising:
a monitor tube of the type employing an electron beam to write information on a display surface to thereby serve as a display tube;
means for causing the electron beam of the display tube to cyclically scan the display surface in a predetermined pattern;
a storage tube of the type having a storage surface adapted to be scanned by an electron beam;
means for cyclically causing the electron beam to scan the storage surface in the predetermined pattern to provide readout signals indicative of information recorded on the storage surface;
means for applying the readout signals of the storage tube to the display tube to cause the information to be displayed;
timing means for causing the electron beams of the storage and display tubes to scan the predetermined pattern in synchronism;
and means for causing new information to be written on the storage tube only during the retrace period of the display tube.

3,275,748
ELECTRON BEAM-DEFINING DEVICE AND METHOD FOR PRODUCING THE SAME

Marvin E. Knoll, Central Square, and William H. Nicklas, North Syracuse, N.Y., assignors to General Electric Company, a corporation of New York

Filed Dec. 23, 1963, Ser. No. 332,348
3 Claims. (Cl. 178—7.87)

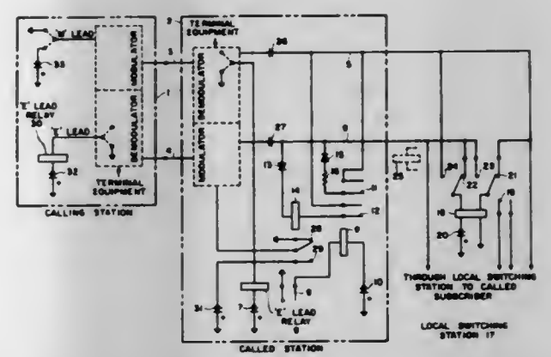


1. A light valve apparatus for positioning between a light source and a screen for the projection of an image on the screen, said apparatus comprising:
(a) an evacuated envelope,
(b) a light-modulating fluid positioned in said envelope and arranged to control the passage of light from the source to the screen,
(c) cathode means positioned in said envelope and arranged to emit a beam of electrons impingent upon said light-modulating fluid to form a diffraction grating thereon for selectively controlling the passage of light from the source to the screen in accordance with the image being projected,
(d) electron beam-defining means including a membrane having an aperture to pass one portion of said beam of electrons, the portion of said membrane about said aperture being adapted in operation to intercept and be heated by a second portion of said beam, said heating in normal operation being sufficient to produce buckling of said membrane if said membrane is untensioned, and
(e) means to maintain said membrane in radial tension about said aperture sufficient to prevent buckling of said membrane when said membrane is heated during normal operation of said apparatus.

3,275,749
TWO-STAGE MULTIPLEX SWITCHING SYSTEM EMPLOYING INTERLACED CONNECTIONS BETWEEN HIGHWAYS AND EXTERNAL CIRCUIT GROUPS

Toshihiro Kunihiro and Nobuhiko Shimasaki, Shiba, Minatoku, Tokyo, Japan, assignors to Nippon Electric Company Limited, Tokyo, Japan, a corporation of Japan

Filed Oct. 8, 1965, Ser. No. 494,221
Claims priority, application Japan, Oct. 14, 1961, 36/37,202
6 Claims. (Cl. 179—15)

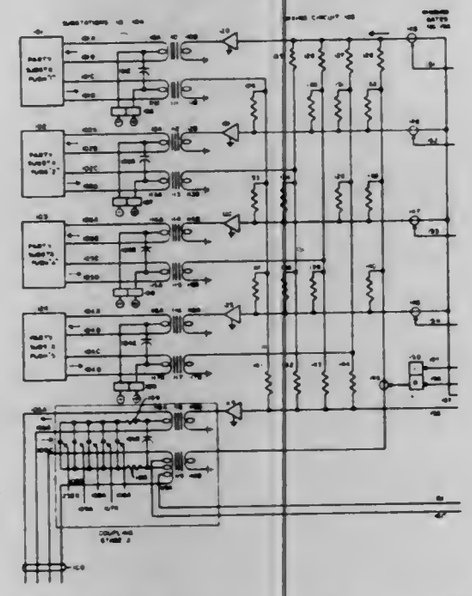


1. In a time-division multiplex switching network comprising a plurality of subscriber groups and a plurality of highway lines equal in number to said plurality of subscriber groups, a plurality of first multiplex switching means for connecting the subscribers of each subscriber group to a first end of their associated highways on a time sharing basis; a plurality of second multiplex switching means for interconnecting the highways of the different subscriber groups at a location removed from the first ends of said highways in accordance with the selection of a called subscriber by a calling subscriber; said second multiplex switching means being operative on a time sharing basis; means for connecting pairs of said subscriber groups to a common highway through selected ones of said first multiplex switch means wherein a different highway is connected to each pair of subscriber groups and no more than one highway is directly associated with any one pair of subscriber groups said second multiplex switching means comprising a plurality of means for selectively connecting said highways on a time-division basis; each of said plurality of means connected between no more than two of said plurality of highways.

3,275,750
SIGNAL CONVERSION CIRCUIT FOR "E" AND "M" TELEPHONE LEADS

Edward Herbert Lanham, 1114 Field St., Ottawa, Ontario, Canada

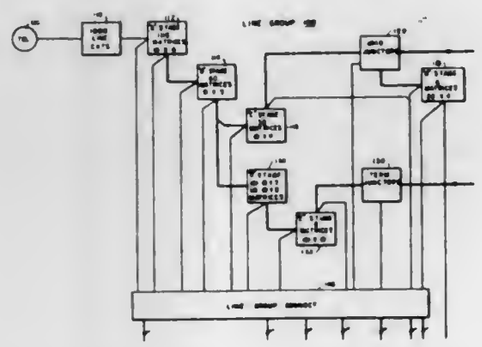
Filed Aug. 2, 1965, Ser. No. 477,670
1 Claim. (Cl. 179—16)



In an "E" and "M" telephone supervisory signalling system wherein pulses are applied to an "E" lead at a called station from an interrupted ground corresponding to dial pulses originating at a calling station, and wherein switching equipment at said called station is normally arranged to cause current to flow in one direction in a pair of wires so that a called subscriber's station can be selected in response to interrupted current flow in said one direction corresponding to said pulses, and wherein said switching equipment is arranged to cause current flow in the opposite direction to said one direction in said pair of wires in response to the answering of a call at said called subscriber's station; a conversion circuit at said called station to convert the pulses applied to the "E" lead into said interrupted current flow in said one direction, and to convert said current flow in said opposite direction into a battery supervisory signal applied to the "M" lead at said called station comprising:
(a) first switching means arranged to be alternately operated and released in response to the pulses applied to said "E" lead;
(b) first circuit means connected across said pair of wires arranged to be energized and de-energized in response to the operation and release respectively of the switching means, said first circuit means being further arranged, when energized and de-energized, to permit current to flow, and to prevent current from flowing, respectively, in said one direction in said pair of wires, thereby providing said interrupted current flow;

(c) second circuit means connected across said pair of wires arranged to be energized and de-energized in response to the operation and release respectively of the switching means, said second circuit means being further arranged, when energized and de-energized, to permit current to flow, and to prevent current from flowing, respectively, in said opposite direction in said pair of wires;

(d) and second switching means responsive to current flowing in said opposite direction in said pair of wires to connect a battery supervisory signal to said "M" lead;

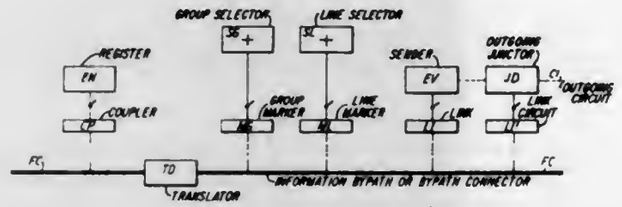


wherein said first switching means comprises a first relay arranged to be alternately energized and de-energized by the pulses applied to said "E" lead; the first circuit means comprises a first diode, a resistor and a make contact of said first relay serially connected together across said pair of wires, the first diode being poled so that current is allowed to flow only in said one direction; the second circuit means comprises a second diode, the energization circuit of a second relay and a further make contact of said first relay serially connected together across said pair of wires, the second diode being poled so that current is allowed to flow only in said opposite direction; and said second switching means comprises transfer contacts of said second relay arranged, when said second relay means is energized, to disconnect ground from, and to apply battery to, said "M" lead.

3,275,751
PARTY LINE ADAPTER FOR FOUR-CONDUCTOR SWITCHING SYSTEM
Carl B. Nennerfelt, Galion, Ohio, assignor to North Electric Company, Galion, Ohio, a corporation of Ohio
Filed Jan. 17, 1963, Ser. No. 252,105
17 Claims. (Cl. 179—17)

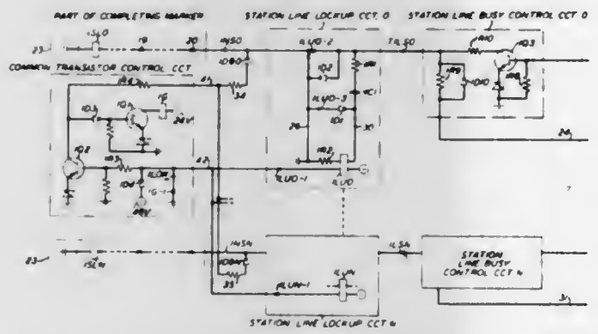
1. In a telephone system having a plurality of four-wire subscriber lines, each of which includes a pair of incoming conductors and a pair of outgoing conductors, a plurality of subscriber substations, each of which has a four-wire circuit, a line adapter circuit for connecting each of said plurality of subscriber substations to a subscriber four-wire line including a mixing circuit having impedance matching means connecting one pair of wires of each of said plurality of substations to the incoming conductors of said subscriber line, and a second set of impedance matching means for connecting a second pair of wires of each of said plurality of substations to the outgoing conductors of said subscriber line, and a third set of impedance matching means connecting the pair of output wires of each substation to the input circuits of each other substation, whereby side tones are substantially minimized in the connection of the plurality of subscriber substations to said single subscriber line.

3,275,752
COMMUNICATION SWITCHING SYSTEM
Maurice H. Esperseth, Mount Prospect, Frank B. Sikorski, Des Plaines, Kore K. Spellnes, Glen Ellyn, and William R. Wedmore, Lombard, Ill., assignors to Automatic Electric Laboratories, Inc., Northlake, Ill., a corporation of Delaware
Filed Nov. 28, 1962, Ser. No. 240,497
6 Claims. (Cl. 179—18)



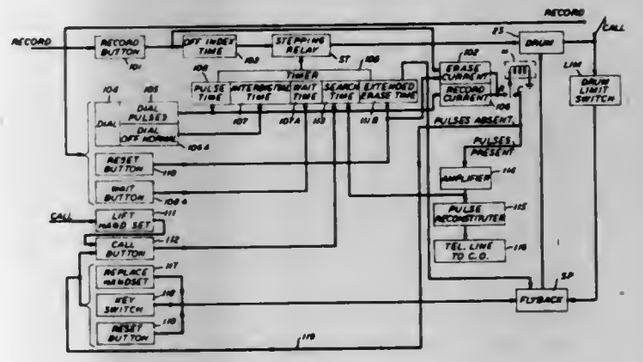
1. In a communication switching system, a first set of terminals, a second set of terminals, at least three switching stages arranged in tandem for selectively electricaliy connecting terminals of the first set with terminals of the second set, each of said stages comprising a plurality of relays arranged in a plurality of coordinate matrices, each relay having an operate winding and a unidirectional device connected in series, at the coordinate points of each of said matrices;

the first two of said switching stages being arranged in groups, each group comprising a plurality of said coordinate matrices in the first stage and a plurality of coordinate matrices in the second stage arranged with first-to-second stage links extending from outlets of the first-stage matrices to inlets of the second-stage matrices with each outlet of any first-stage matrix connected to an inlet of a different second-stage matrix; the third of said switching stages being arranged in groups of matrices with second-to-third stage links interconnecting outlets of the first-second stage groups to the inlets of the third-stage groups with each outlet of any first-second stage group connected to an inlet of a different third-stage group; to thereby form one and only one path including one coordinate point relay of each stage between any terminal of said first set and any terminal of said second set;



means to idle test said links, means to select a terminal of the first set and a terminal of the second set at the ends of a path having the first-second stage link and the second-third link idle, means to apply a first marking potential to said selected terminal of the first set and a second marking potential to said selected terminal of the second set which produces a potential difference in the forward direction of said devices between the two selected terminals through a series path including the operate winding and unidirectional device of one coordinate point relay of each of said stages, which causes said relays in the path between the selected terminals to operate and thereby establish a communication path; the only potentials applied to said series path to establish a connection being the potentials applied to said selected terminals.

3,275,753
ELECTRONIC TRANSLATOR
Henri Benmussa, Meudon, and Maurice Jean Clerc, Nanterre, France, assignors to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware
Filed Jan. 7, 1963, Ser. No. 249,783
Claims priority, application France, Jan. 31, 1962, 886,518, Patent 1,325,636
8 Claims. (Cl. 179—18)

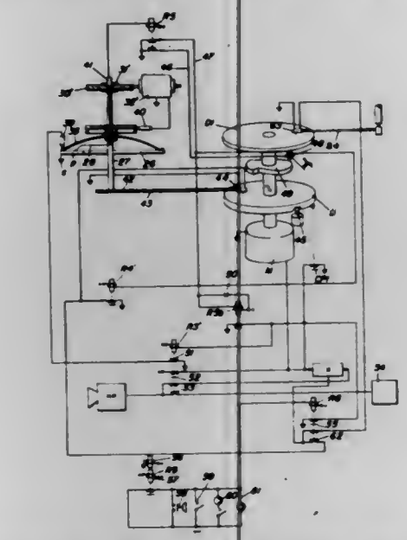


1. An electronic translator for use in a telephone system for translating directory number data into locational data comprising input decoding means for converting coded signals indicative of a desired line directory number into corresponding decimal signals, analyzing means for translating said line directory number decimal signals into locational decimal signals indicative of the location of the desired line, comparator means for selectively blocking and passing said locational decimal signals, and output coding means for coding said passed locational decimal signals into coded locational signals.

3,275,754
CALL DISTRIBUTING CIRCUIT
Jesse O. Howell and Donald A. MacLeod, Oakland, Calif., assignors to American Telephone and Telegraph Company, New York, N.Y., a corporation of New York
Filed June 12, 1963, Ser. No. 287,320
10 Claims. (Cl. 179—18)

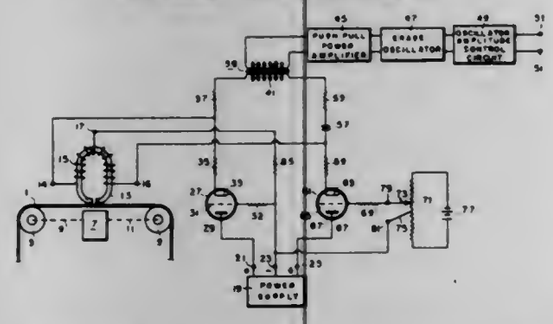
1. In a telephone system, a plurality of lines arranged in a group, cross-point switching means for effecting connections to said lines, marker means for controlling said switching means, artificial busy circuit means for each of said lines, said last-mentioned means including a relay having a primary and a secondary winding, a capacitor, means for normally charging said capacitor excluding said relay windings, means responsive to establishment of a connection through said switching means by said marker means to a line for discharging said capacitor through said primary winding, locking means responsive to energization of said relay for locking said relay operated, means for discharging said capacitor on origination of a call by the line at a rate such as to prevent operation of said relay and to a value insufficient to energize said relay on direct application of ground to said capacitor, and means for releasing all of said locking means on energization of all said relays of said lines in said group.

3,275,755
MAGNETIC REPERTORY DIALER WITH PULSE RECONSTITUTOR
Norris R. Hall, James H. Ham, Jr., Willard E. Hostetler, Kenneth O. Hutchinson, and Lawrence A. Strommen, Indianapolis, Ind., assignors to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Nov. 5, 1963, Ser. No. 321,617
14 Claims. (Cl. 179—90)



1. Apparatus for the regeneration of electrical pulses comprising, in combination, first means for generating pulses, means for storing said last named pulses, means for extracting said pulses from said storing means at a first pulse repetition rate, second means for generating pulses at a second pulse repetition rate and at a fixed duty cycle, said second rate being slower than said first rate, and means responsive to the first of a group of pulses removed from said storing means by said extracting means for initiating the operation of said second means, said initiating means being further responsive to each succesive pulse in said group of pulses which falls within a preselected range of pulse repetition rates for continuing the operation of said second means on a free running basis irrespective of the relative rate of said group of pulses within said range and irrespective of the duty cycle of the pulses in said group.

3,275,756
CONTROL SYSTEM INCORPORATING A SERIES OF ELECTRIC CIRCUITS AND PROVIDING THE READING ALOUD OF AN INFORMATION CARRYING RECORD
Roger Daniel Vauquelin, 15 rue d'Armenonville, Neuilly-sur-Seine, France, and Michel Roubertie, 6 bis Boulevard de Gaulle, Sarcelles, Seine, France
Filed Mar. 26, 1962, Ser. No. 182,596
6 Claims. (Cl. 179—100.1)



1. Apparatus for controlling a series of electric contacts included in a series of electric circuits, the closing of one of said contacts corresponding each to an abnormal condition, and providing the reading aloud of an information carrying record corresponding to the abnormal condition of the controlled closed contact, said apparatus comprising, a series of contact pieces connected each with one of said electric circuits, a scanning system for said series of electric contacts and including a contact arm said contact arm being adapted to engage in succession said contact pieces, a reading electric circuit connected with said contact arm, connecting means interconnecting the said controlled circuits and disconnecting them upon closing of one of said circuits, means controlled by said connecting means to start the scanning system upon closing of one of said circuits, a record comprising a plu-

rality of sections, each section giving out information relating to different conditions associated with the controlled electric contacts, means for reading said record, means for controlling the relative position of the reading means with reference to the record according to the posi-

tion of the arm of the scanning system, and means fed by the reading electric circuit and controlling the section of the record read by the reading means according to the electric condition of the contact piece engaged by the contact arm.

3,275,757
CARRIER-ERASE MAGNETIC TAPE RECORDING
John H. Sasseen, Houston, Tex., assignor, by mesne assignments, to Esso Production Research Company, Houston, Tex., a corporation of Delaware
Filed Mar. 27, 1963, Ser. No. 268,369
4 Claims. (Cl. 179—100.2)

1. Apparatus for providing an electromagnetically reproducible recording of an electrical control signal on a magnetic tape on which is previously recorded a constant amplitude, sinusoidal signal having a period at least four times the period of said control signal, said apparatus comprising:

an electromagnetic recording head including a winding having a center tap and first and second end connections;

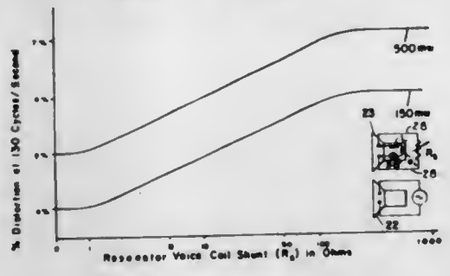
magnetic tape transport means for moving said magnetic tape in magnetic recording relationship past said recording head;

an isolating transformer having a primary winding and a secondary winding;

first circuit means for coupling said secondary winding across said first and second end connections;

resistor means connected to said center tap;

second circuit means connected between said first end connection and said center tap through said resistor means for passing a constant amplitude direct current through one-half of said recording head winding;

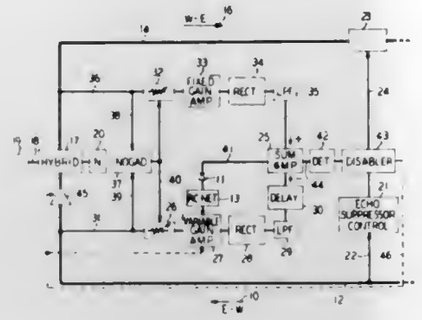


third circuit means connected between said second end connection and said center tap through said resistor means for passing a direct current through the other half of said recording head winding;

means coupled to said third circuit means for adjusting the amplitude of the direct current through the other half of said recording head winding whereby the flux level produced by current flow through said first and second circuit means and said winding is of a predetermined value;

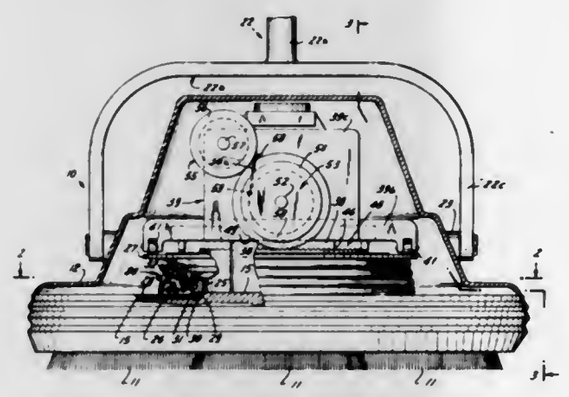
fourth circuit means coupled to said primary winding for supplying to said primary winding a signal having a frequency not less than ten times the frequency of the pre-recorded signal on the tape carried past said recording head; and

fifth circuit means connected to said fourth circuit means and having input terminal means for varying the amplitude of the output signal of said fourth circuit means in accordance with variations in amplitude of an electrical control signal applied to said input terminal means.



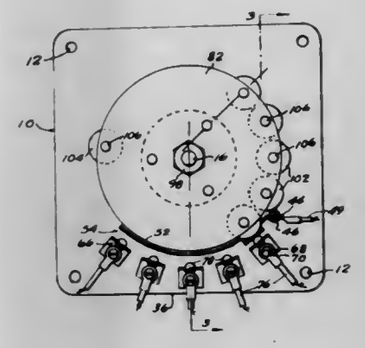
3,275,758
SOUND REPRODUCING APPARATUS
Samuel Bryan, Silver Spring, Md., and Walter B. Udell, Philadelphia, Pa., assignors, by mesne assignments, to Walter B. Udell, Philadelphia, Pa.
Filed Sept. 27, 1962, Ser. No. 226,703
14 Claims. (Cl. 179—116)

6. In a system for radiating sound energy, first vibratory means for propagating sound energy and means for coupling the same to an actuating source, second vibratory means, an enclosure having apertured wall portions to which both of said vibratory means are mounted so that one surface of each of said vibratory means is contacted by the atmosphere outside of said enclosure and the vibratory means are acoustically coupled to one another within the enclosure by means of the air volume contained within the enclosure, each of said vibratory means being characterized by a free air vibratory resonance frequency substantially lower than the resonance frequency range of said vibratory means mounted in the enclosure, and velocity responsive damping means electromechanically coupled to said second vibratory means for damping the amplitude excursions of said first vibratory means by selectively absorbing the sound energy therefrom, said velocity responsive damping means including means for selectively varying within limits the relative phase relation between the motions of said first and second vibratory means.



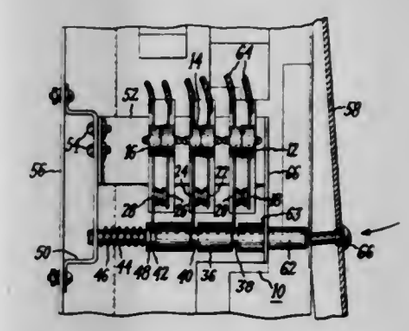
3,275,759
BREAK-IN ARRANGEMENT WITH COMPENSATION FOR VARIATIONS IN THE TRANS-HYBRID LOSS FOR ECHO SUPPRESSORS
Paul T. Brady, Summit, N.J., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Apr. 15, 1963, Ser. No. 273,199
6 Claims. (Cl. 179—170.6)

1. In a transmission system including at least two terminals interconnected by transmitting and receiving paths, an echo suppressor connected to said paths at each terminal for inserting attenuation in the transmitting path when signals are received in the receiving path from the other of said terminals, an amplifier connected to each of said paths for producing an amplified replica of the signals thereon, means for comparing the levels of said amplified



signal replicas and detecting both the magnitude and the sense of their difference, means operative when the difference is of one sense for varying the gain of at least one of said amplifiers in the direction to equalize said compared signals, and means operative when the difference is of the other sense for disabling said echo suppressor.

3,275,760
CORDWINDER
Paul Emile Gaudry, Laval des Rapides, Quebec, Canada, assignor to Aktiebolaget Electrolux, Stockholm, Sweden, a corporation of Sweden
Filed July 11, 1963, Ser. No. 294,389
15 Claims. (Cl. 191—12.2)

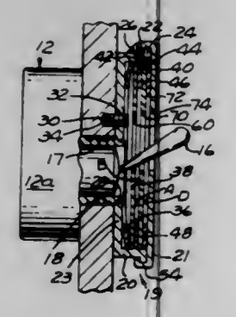


1. In a cordwinder, a frame, a cordwinding spool mounted on the frame for rotation about a first axis, the spool including axially spaced flanges, a cord connected to the spool to be wound thereon between the adjacent inner faces of the flanges, a driving drum mounted on the frame for rotation adjacent to the outer face of one of the flanges about a second axis transverse to the first axis, means including gearing for rotating the driving drum when the cord is unwound from the spool, the gearing comprising a first gear adjacent to the outer face of the one flange and rotatable with the spool and a second gear adjacent to the driving drum and rotatable therewith, a spring storage drum mounted on the frame to one side of and in radial alignment with the driving drum for rotation about a third axis parallel to the second axis, and a spring prestressed to coil tightly around the storage drum and having its outer end secured to the driving drum to be wound thereon when the spool is rotated by the unwinding of the cord from the spool and the gearing effects rotation of the driving drum.

3,275,761
ROTARY SEQUENCE SWITCH WITH RADIAL CAMMED PIVOTAL CONTACT STRUCTURE
Charles Yakim, 612½ Soles St., McKeesport, Pa.
Filed July 9, 1965, Ser. No. 470,717
4 Claims. (Cl. 200—11)

3. A rotor sequential switch comprising a dielectric base plate, a plurality of equally spaced relatively rigid conductive contact bars fixed to and extending laterally from the base plate, said contact bars being arranged in an arc, a similar plurality of resilient and flexible conductive contactor blades fixed on and extending laterally from the base plate and spaced radially inwardly from and individually aligned with the contact bars, said contactor blades being electrically connected together and said contact bars being unconnected together, an electric motor driven rotor spaced radially inwardly from and concentric with said contactor blades, said rotor comprising disc means whose peripheral boundary is spaced radially inwardly from the contactor blades, an arc of cam wheels journalled on and extending beyond the boundary of the disc means, said cam wheels being the same in number and spacing as the contactor blades, said cam wheels extending radially outwardly from the rotor to engage and flex the contactor blades into engagement with the contact bars as the rotor is rotated.

3,275,762
AUTOMATIC CIRCUIT CLOSER WITH SPRING BIASED NORMALLY CLOSED CONTACT STRUCTURE
William R. Isaacs, Dover, N.H., and Kenneth R. Stowe, South Berwick, Maine, assignors to General Electric Company, a corporation of New York
Filed June 28, 1965, Ser. No. 467,669
1 Claim. (Cl. 200—16)



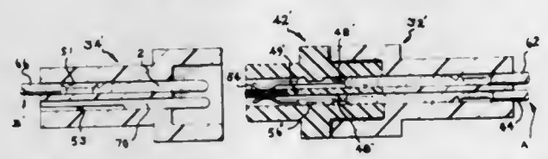
An automatic circuit closer for mounting in the casing of an electrical device to be actuated by the cover of the casing comprising, in combination:

(a) a mounting member for mounting the circuit closer in the casing of an electrical device,

(b) a plurality of switches,
(1) said plurality of switches mounted on said mounting member,
(2) each of said plurality of switches having a fixed contact and a movable contact,
(c) an operator, said operator movably mounted in said mounting member,
(1) means connecting said operator to said movable contacts of said plurality of switches,
(d) spring means mounted on said operator between said mounting member and a shoulder on said operator,
(1) said spring means acting to hold said operator in a position in which said plurality of switches are closed,

said operator being mounted in said mounting member such that the cover of a casing in which said mounting member is mounted will engage said operator to open said switches when the cover is placed on the casing.

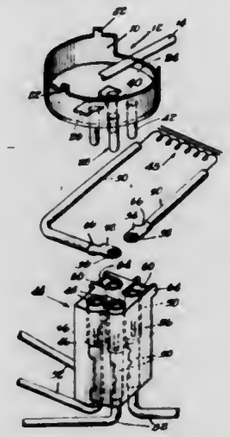
3,275,763
COMBINATION LOCK APPARATUS HAVING LOCK ELEMENTS WITH ALIGNABLE OPENINGS
Paul J. Ethington, 1418 Washington Blvd., Birmingham, Mich.
Filed Sept. 26, 1963, Ser. No. 311,859
15 Claims. (Cl. 200—43)



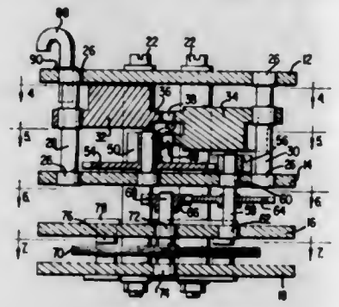
3. In a combination lock assembly, a housing having a rotatable cover, a plurality of substantially circular coacting lock elements disposed within said housing, each of said elements being rotatably supported at its periphery on said housing and having an elongated opening therein extending through the axis of said element, actuating means on said cover operable in response to rotation of said cover to move one of said elements which is in turn operable to move another one of said elements, said cover means being operable in response to rotation thereof in first one direction and then in the opposite direction to position said elements such that the openings therein are substantially aligned.

3,275,764
ELECTRIC LIMIT SWITCH HAVING A DIAGONALLY DIVIDED HOUSING, A DETACHABLE ACTUATOR, AND MECHANISMS FOR CAUSING SELECTED OPERATION OF A PUSH BUTTON SNAP SWITCH
Rudolf H. Kiessling, Milwaukee, Wis., and Carl A. Schaefer, Asheville, N.C., assignors to Square D Company, Park Ridge, Ill., a corporation of Michigan
Filed June 5, 1964, Ser. No. 372,854
16 Claims. (Cl. 200—47)

8. An electric limit switch comprising; a hollow housing providing an internal cavity, a separately enclosed snap switch mounted within the cavity having an operator extending toward an end of the housing, a slider having a portion movable within the cavity and arranged when moved to actuate the switch operator, a pair of plungers carried by the end and each independently movable of the slider and arranged when moved to move the slider, and means including a movable external operator, said means being securable in any one of a plurality of angular positions on the end of the housing and arranged to move the plungers individually and selectively in response to the direction of movement of the external operator.

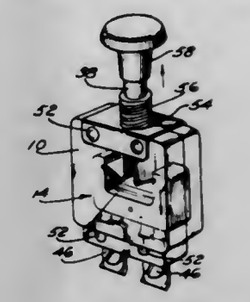


3,275,765
ELECTRICAL CONNECTING AND SWITCH DEVICE
Gilbert Douglas Ferdon and Homer Ernst Henschen, Carlisle, Pa., assignors to AMP Incorporated, Harrisburg, Pa.
Filed Jan. 10, 1964, Ser. No. 337,005
2 Claims. (Cl. 200—51.1)



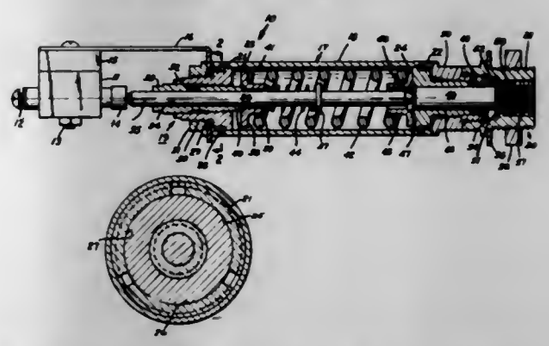
1. A multi-contact electrical connecting device comprising: a pair of connector housings and a connecting housing, said connector housings each having a hood surrounding, and extending beyond, one end thereof, said connecting housing having opposite ends conforming to the internal configuration of said hoods whereby, said connector housings can be coupled to, and decoupled from, said connecting housing, a plurality of contact terminal cavities extending through each of said connector housings, contact terminals in at least some of said terminal cavities, said terminals each having a contact portion of channel-shaped cross-section disposed within the confines of said hoods, said connecting housing having contact spring cavities extending between said opposite ends, contact leaf springs disposed within said contact spring cavities, the ends of said leaf springs being engageable with said contact portions of said contact terminals upon coupling of said connector housings to said opposite ends of said connecting housing thereby to form conducting paths between individual conductors secured to said contact terminals, shunt means in said connecting housing extending from a first one of said contact spring cavities to a second one of said contact spring cavities, said shunt means normally being in engagement with the contact leaf springs in said first and second contact spring cavities whereby, a continuous conducting shunt path is established between two conductors secured to contact terminals in one of said connector housings when said one connector housing is coupled to said connecting housing, and shunt circuit interrupting means in a corresponding contact terminal cavity in the other one of said other connector housings, said shunt circuit interrupting means being engageable with said shunt means for deactivating said shunt means when said other connector housing is coupled to said connecting housing thereby to break said conducting shunt path and to establish a conducting path between two corresponding contact terminals in said connector housings.

3,275,766
SWITCH CONNECTOR
John H. Krehbiel, Brookfield, Ill., assignor to Molex Products Company, Downers Grove, Ill., a corporation of Illinois
Filed Sept. 15, 1964, Ser. No. 396,631
3 Claims. (Cl. 200—51)



1. A switch connector, comprising a housing having longitudinal and transverse dimensions, a transverse wall in said housing, a switch in said housing disposed longitudinally on one side of said wall and including a moveable switch operator, a plurality of connecting pins fixed to said housing and extending from said transverse wall longitudinally in the opposite direction from said switch and also extending through said transverse wall toward said switch, a complementary separable electric connector having a housing with a plurality of female electric connectors respectively detachably receiving said pins, said connector housing having a pair of recesses each opening longitudinally of said female connectors and laterally thereof, a pair of wires each having an apertured terminal thereon, each of said apertured terminals being received on one of said pins and disposed in one of said connector housing recesses, said connector housing and said transverse wall of said first-mentioned housing cooperating to insulate said terminals electrically.

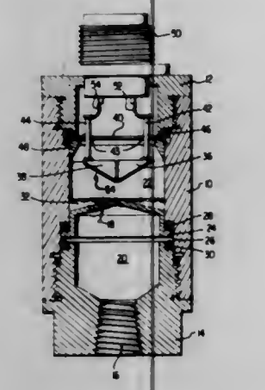
3,275,767
VELOCIMETER INCORPORATING A DRAG DISC WITH CONDUCTIVE LAMINATIONS
John M. Bergey, Lancaster, Pa., assignor to Hamilton Watch Company, Lancaster, Pa., a corporation of Pennsylvania
Filed Aug. 4, 1964, Ser. No. 387,370
14 Claims. (Cl. 200—61.45)



1. A velocimeter comprising an eccentrically mounted mass subject to rotation under the influence of acceleration forces, means coupled to said mass for actuation by movement thereof, a rotatable element having a plurality of conductive laminations coupled to and driven by said mass, and means for passing a magnetic field through said laminated element.

3,275,768
SNAP-ACTION ELECTRIC SWITCH
Kent J. Batcheller, 30 Brush Hill Road, Newton, Mass.
Filed Apr. 13, 1964, Ser. No. 359,123
1 Claim. (Cl. 200—76)

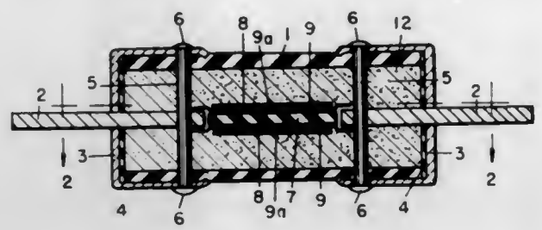
A snap-action electric switch comprising a hollow body consisting of two members of insulating material fastened together, a push rod extending slidably through the top of said body, two terminal members extending through and fixed in the bottom of said body, a planar contact blade in said body movable in its own plane down into contact with said terminal members and up out of contact with said terminal members, and means responsive to a downward movement of said push rod to raise said contact blade out of contact with said terminal members and responsive to an upward movement of said push rod to move said contact blade down into contact with said terminal members, said means comprising a spring toggle mechanism operatively connecting said push rod and said contact blade, said contact blade being mounted for limited rocking movement in its own plane for balanced engagement with the two said terminal members.



3,275,769
PRESSURE SWITCH HAVING HEAD PORTIONS HELD BY GROOVE MEANS
Paul J. Weaver, Pasadena, Calif., assignor to Armand C. Anderson, Alhambra, Calif.
Filed Dec. 17, 1963, Ser. No. 331,176
4 Claims. (Cl. 200—82)

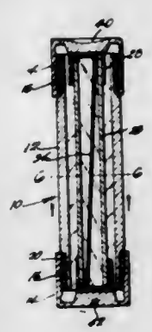
1. A pressure switch adapted to change its switching condition in response to a predetermined fluid pressure, comprising: a switch comprising a contact movable to change the switching condition of the switch; and an actuator connected to the switch comprising a body tube having an axis and a first end an a second end, a first and a second head in the respective ends of the body tube, a first and a second axial bore passing through the respective first and second heads, the first bore being adjacent to the switch, and the second head being adapted to connect the second bore to a source of pressure to which the actuator is responsive, a first and a second piston, said

second piston slidably fitted in the second bore, the second piston making a fluid sealing fit in the second bore, one end of the second piston being exposed to said fluid pressure at the second end, force spring means interposed between the body and the second piston in opposition to said fluid pressure; means for adjusting the initial loading of the force spring means comprising a tubular screw threaded into said first bore, said first piston slidably fitted in said tubular screw, the force spring means being backed up by the tubular screw, a protrusion on said second piston, a pair of axially spaced apart surfaces on said actuator adapted to be engaged by the protrusion to limit the axial movement of the second piston, a pair of axially spaced apart internal undercut grooves in the body tube, a shoulder on each head, and a segment in each of said grooves which segment projects into the body tube to radially overlap the respective shoulder and thereby prevent expulsion of the heads from the tube.



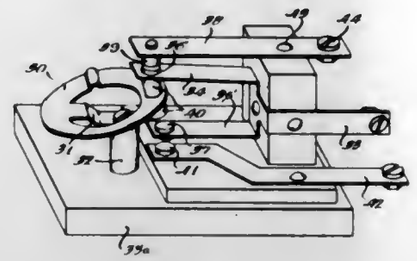
3,275,770
EXPLOSION PRESSURE RESPONSIVE SWITCH
Lauren G. Kilmer and Richard K. Shearman, Tulsa, Okla., assignors, by mesne assignments, to Sinclair Research, Inc., New York, N.Y., a corporation of Delaware
Filed Feb. 26, 1965, Ser. No. 435,450
6 Claims. (Cl. 200—82)

1. A switch comprising a hollow body, plate means sealing the top of the hollow of said body, the hollow of said body having a sidewall, a split cone electrode means including two electrically-conductive elements supported in the hollow of said body beneath said plate, said elements being spaced a small distance apart, means for sealing the bottom of said hollow including a piston arranged at the bottom of said hollow body, said piston having limited axial movement in the hollow of said body, a small body of mercury normally resting on said piston means beneath said plate, and deflector means adjacent said electrode means for deflecting mercury which strikes the same substantially axially of said body in the direction toward said electrode means, whereby when a sudden force is applied at the bottom of said hollow body said piston means is suddenly raised to throw said mercury upward where it is deflected to pass between said two elements and momentarily complete a circuit through said electrode means.



3,275,771
ELECTRIC FUSE HAVING MAGNETIC ARC-QUENCHING ACTION
Erwin Salzer, Waban, Mass., assignor to The Chase-Shawmut Company, Newburyport, Mass.
Filed Apr. 30, 1965, Ser. No. 452,051
12 Claims. (Cl. 200—120)

1. An electric fuse comprising in combination:
(a) a substantially tubular housing of insulating material;
(b) a pair of terminal elements arranged at the axially outer ends of said housing;
(c) an elongated flat plate of an organic insulating material evolving gases under the heat of electric arcs metal clad on both surfaces thereof and forming a pair of narrowly spaced parallel current paths each defining a plurality of registering points of reduced cross-section arranged inside said housing;

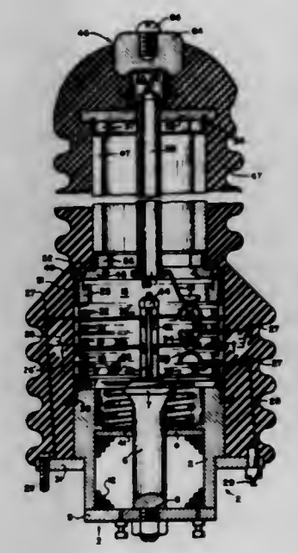


(d) means for conductively connecting the ends of said member to said pair of terminal elements; and
(e) a pulverulent arc-quenching filler inside said housing limited to space radially outward from said plate and said metal cladding thereof.

3,275,772
CLEAR BARREL CARTRIDGE FUSE
Robert E. Neff, Orlando, Fla., assignor to Devices Inc., Orlando, Fla., a corporation of Florida
Filed Dec. 23, 1964, Ser. No. 420,491
5 Claims. (Cl. 200—129)

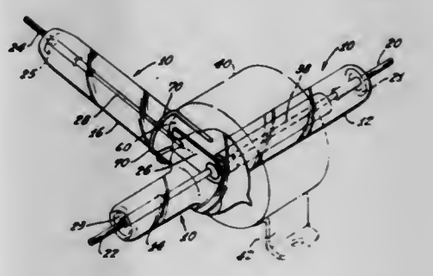
1. A clear barrel cartridge fuse comprising a hollow cylindrical body constructed of transparent plastic material, a metal cap disposed at each end and fused to the cylindrical body at each end, an inner cylindrical body transversely disposed within the hollow cylindrical body along its length and constructed of transparent plastic material, said inner cylindrical body having a fuse body disposed along the length of the inner cylindrical body and positioned therein, said fuse body forming a portion of an electrical circuit formed between the said metal caps, said metal caps having an inner threaded portion engaged to the ends of the hollow cylindrical body by an annular sleeve, said metal caps having an inner cap surface defined by an annular recess, said inner threaded portion of the metal caps terminating with the annular recess, said annular formed inner cap surface engagingly mating with the end of the metal ends of said inner cylindrical body, said annular metal sleeve being of reduced size and having uniform outside diameter throughout substantially identical with the uniform outside diameter of the hollow cylindrical body, said sleeve threadedly engaging the outer portion of the ends of the hollow cylindrical body for fixedly disposing the outer ends of the inner cylindrical body securely to a threaded annular inner surface of the adjacent metal caps thereof.

3,275,773
OVER-CENTER SNAP SWITCH
Philip D. Grover, Two Rivers, Wis., assignor to Grover Products Corporation, a corporation of Illinois
Filed Apr. 9, 1964, Ser. No. 358,570
4 Claims. (Cl. 200—138)



1. A thermal responsive snap switch comprising, a heat conducting base, an annular body of bimetal, a wave in said body inducing an initial stress and concave configuration therein, an unstressed compensating member extending inwardly from the periphery of the body defining a mounting for said annular body, a heat conducting member extending from the base on which the compensating member is mounted, a stationary contact and a movable contact, heating of the body causing over-center movement of the body to change the relation of said contacts, a leaf carrying said movable contact and engageable by said annular body.

3,275,774
THERMAL PROTECTIVE ARRANGEMENT FOR INDUCTIVE DEVICES
Imrich M. Miller, Paterson, N.J., assignor to Universal Manufacturing Corporation, Paterson, N.J., a corporation of New Jersey
Filed July 19, 1963, Ser. No. 296,235
5 Claims. (Cl. 200—142)



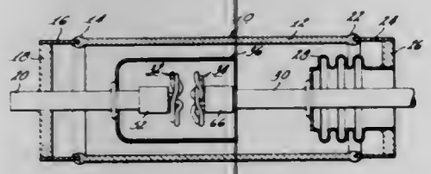
1. A thermal protective arrangement comprising in combination: an inductive device including a winding for carrying electric current formed by a number of superposed layers of wire, a holder having at least a portion thereof buried between two adjacent layers of said winding, a thermal sensitive electrical fuse element operative at a predetermined critical temperature located within said holder and having its thermal sensitive portion completely surrounded by the layers of said winding and in heat sensing relationship therewith for sensing the operating temperature of the winding, said holder having a portion in direct contact with said windings and lying adjacent the thermal sensitive portion of said fuse element to convey heat from said windings to said fuse element at least partially by conduction, said holder also being formed with an open section substantially along its length to permit convection of the winding heat to said fuse element, and means electrically connecting said winding in series with said fuse element for modifying the winding when the fuse senses said critical temperature.

3,275,775
HERMETICALLY SEALED RELAY HAVING HIGH AND LOW VOLTAGE CONTACT ASSEMBLIES IN A COMMON CHAMBER
Jack S. Hawkins, San Jose, Calif., assignor to Jennings Radio Manufacturing Corporation, San Jose, Calif., a corporation of Delaware
Filed Nov. 29, 1963, Ser. No. 326,960
7 Claims. (Cl. 200—144)

7. A high voltage grounding relay comprising an hermetically sealed hollow envelope including a high voltage insulator section, a contact section and an actuator section axially aligned and disposed end-to-end in hermetically sealed relation, a high voltage contact assembly comprising an elongated tubular conductor extending coaxially through the high voltage insulator section and supported thereon, a fixed high voltage contact supported on the inner end of the elongated tubular conductor, a movable high voltage contact supported on the envelope contact section and movable into and out of engagement with the fixed high voltage contact, and actuator means within the actuator section including a central stem engaging the movable high voltage contact and operable to effect make and break operation thereof.

3,275,776
HIGH VACUUM MINIATURIZED RELAY
Victor E. De Lucia, 2051 Pontius Ave., Los Angeles, Calif.
Filed Sept. 2, 1964, Ser. No. 394,012
3 Claims. (Cl. 200—144)

1. A vacuum relay including: an evacuated envelope; a first electrical contact rod extending into said envelope; a tubular member of magnetizable material coaxially mounted on said electrical contact rod and extending along at least a portion of the axial length of said contact



rod, said tubular member having an inner surface spaced radially from said contact rod; an armature of magnetizable material mounted in said envelope in position to extend transversely of the longitudinal axis of said contact rod adjacent the inner end of said contact rod; movable electrical contact means mounted on said armature selectively to engage the inner end of said contact rod; a core member of magnetizable material removably mounted externally of said envelope in coaxial relationship with said tubular member; an electric energizing coil mounted in said core member for establishing a magnetic flux in said envelope; an arcuate-shaped shoe member mounted on said core member and partially surrounding a portion of said envelope to support said core member on said envelope; and a removable clip means retained by said shoe member for holding said envelope in said core member.

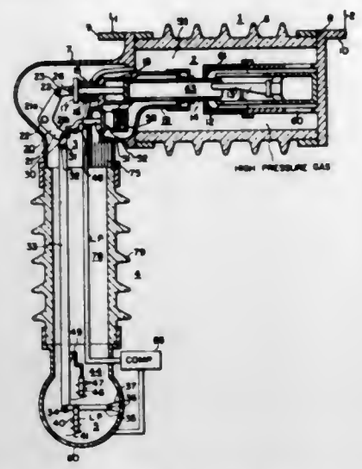
3,275,777

MULTIPOINT CONTACTS EMPLOYING THE ARC ROTATING PRINCIPLE

Herbert M. Pflanz, Nuenen, Netherlands, and Zygmunt A. Wachta, Boston, Mass., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis.

Filed Nov. 25, 1964, Ser. No. 413,820
10 Claims. (Cl. 200—144)

1. In an electric circuit interrupter, in combination, a pair of cooperating contacts relatively movable into and out of engagement with each other, at least one contact of said pair of contacts comprising a plurality of electrically conductive rods, each rod comprising a straight shank portion, a first curved portion connected to said shank portion and curved back upon itself in a first plane, and a second curved portion connected to said first curved portion with the second curved portion lying in a plane normal to and intersecting said first plane of said straight shank portion and the first curved portion, each rod in said one contact being adapted to make point contact with the other contact of said pair of contacts when said pair of contacts are in engagement with each other.



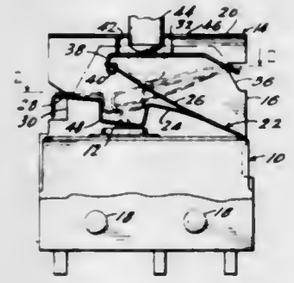
3,275,778

COMPRESSED-GAS CIRCUIT INTERRUPTER WITH PRESSURIZED ARCING CHAMBER AND DOWNSTREAM BLAST VALVE

Shoji Morioka, Hyogo-ken, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan, a company of Japan

Filed July 31, 1963, Ser. No. 298,845
Claims priority, application Japan, Aug. 18, 1962, 37/35,770
8 Claims. (Cl. 200—148)

1. In a compressed-gas circuit interrupter, in combination, means defining an arcing chamber containing gas under high pressure, separable contact means including a movable venting tubular contact disposed therein and separable to establish an arc, means defining a downstream blast-valve for venting the arcing chamber through said movable venting tubular contact, unrestricted passage means connecting the interior of said pressurized arcing chamber through said movable venting tubular contact with said downstream blast-valve, and means synchronizing opening of the downstream blast-valve with separation of the separable contact structure whereby an immediate flow of high pressure gas through the movable venting tubular contact occurs prior to contact part.

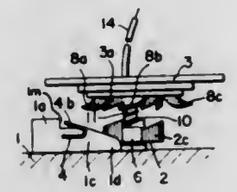


3,275,779

SNAP ACTION DEVICE

John O. Roeser, Morton Grove, Ill., assignor to Master Specialties Company, Gardena, Calif., a corporation of California

Filed June 3, 1965, Ser. No. 460,893
3 Claims. (Cl. 200—153)



3. In a switch structure and the like, including a housing and a pair of spaced-apart switch actuating buttons each of which is spring biased outwardly to a normal position and each of hwich must be forced inwardly to a second actuated position, the improvement comprising, a leaf spring member having three generally parallel legs comprising a center compression spring leg and two outer tension legs, one end of said center leg being integrally connected to one end of said outer legs and the other end of said center leg being unconnected to the other end of said outer legs, said other end of said outer legs being in pivotal abutment with said housing, said outer legs having a downwardly bent U-shaped portion positioned over said pair of spaced-apart switch actuating buttons for engagement therewith, an actuating member one end of which pivotally abuts said housing at a location adjacent said one end of said legs of said leaf spring member and with the other end of said actuating member being free to move from an outer position abutting said housing to an inner position adjacent said buttons, said free end of said center leg being retained under compression by pivotal abutment with said actuating member and being shaped to cause said outer legs to abut and hold said buttons in their inner positions when said actuating member is in said outer position and to cause said leaf spring member to snap to an outer position allowing said buttons to move to their outer positions when said actuating member is moved to its inner position, and abutment means engaged by said leaf spring member when said one end of said legs are in said outer and inner positions, said outer and inner positions of said leaf spring member being outwardly and inwardly respectively of the unbent positions of said outer legs of said leaf spring member when engaging said buttons in their outer and inner positions respectively.

3,275,780

APPARATUS FOR AUTOMATIC LOCKING AND RELEASING CORD REELS AND AUTOMATIC CONNECTING AND DISCONNECTING OF THE CORD ON THE REEL

Kunio Baba, Tokyo, Japan, assignor of fifty percent, to Dearman Co., Ltd., Tokyo, Japan, a company of Japan

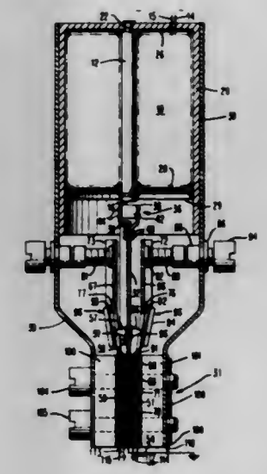
Filed May 27, 1965, Ser. No. 461,606
8 Claims. (Cl. 200—153)

1. A spring-wound cord reel for an electric cord having at least one electric conductor therein, comprising a reel member having a hub, winding spring means in said hub for rotating said reel in the winding direction when a cord on the reel has been unwound by rotating the reel member in the unwinding direction, and automatic electric connecting and disconnecting means comprising a plurality of projecting elements at least as great in number as the number of conductors in the cord and mounted on an end face of said reel, each projecting element having in inclined portion thereon inclined to the end face of the reel, said inclined portions each extending from the projecting element in the winding direction of the reel, and a portion on the end of the inclined portion farthest from the end face of the reel which is perpendicular to the end face of the reel, a contact on the outer end of each projecting element, the respective contacts being adapted to be connected to the conductors in the electric cord, a relatively rotatable electric conductor and lock means freely rotatably mounted on said hub and mounted on said hub for relative movement in the direction of the axis of said hub toward and away from said hub, spring means engaged with said electric conductor and lock means urging it toward said hub, a stationary abutment means adjacent and opposed to the face of said hub which has the projecting elements thereon for engaging said electric conductor and lock means when said electric conductor and lock means is engaged with one of said perpendicular portions on the end of one of said projecting elements, said inclined portions on said projecting elements wedging said electric conductor and lock means toward said stationary abutment means when said electric conductor and lock means is rotating relative to said hub, and further contacts on said stationary abutment means in positions to be contacted by said electric conductor and lock means when said electric conductor and lock means abuts said stationary abutment means.

3,275,781

VIBRATORY TYPE OF SYNCHRONOUS CONVERTER

Thomas T. Highley, Jr., and Morris Joseph, Philadelphia, Charles W. Ross, Hatboro, and Albert J. Williams, Jr., Philadelphia, Pa., assignors to Leeds and Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania



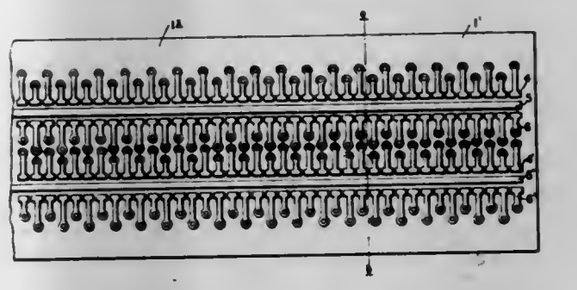
Filed July 22, 1964, Ser. No. 384,351
20 Claims. (Cl. 200—166)

12. A device for opening and closing electrical circuits comprising,

a stationary contact having a contacting surface,

a movable contact having a contacting surface adjacent to one end thereof, said other end being fixed to allow movement of the contacting surface of said movable contact into and out of contact with the contacting surface of said stationary contact, a portion of said movable contact adjacent to said fixed end being flexible in character,

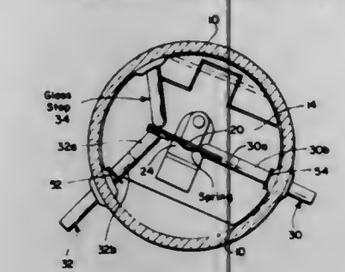
means operable to exert a varying force on said movable contact at a point between said fixed end and said contacting surface and in a direction tending to cause the contacting surface of said movable contact to move about an instantaneous center which is in



an average plane of that resilient portion lying between said fixed end and said point of force application and spaced from the contacting surface of said movable contact so that said center is on that side of the contacting surface of said movable contact opposite from the contacting surface of said stationary contact whereby said movement has a tangential component of the motion of the contacting surface of said movable contact about said center which is in the same direction as motion of said contacting surface of said movable contact along said contacting surface of said fixed contact as said force is changed to alter the relationship of said surfaces.

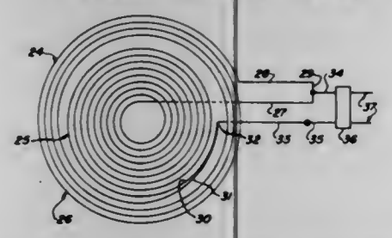
3,275,782

SELECTOR SWITCH COMPONENTS



Robert E. Hartsock, 2025 Deep Canyon Road, La Habra, Calif.

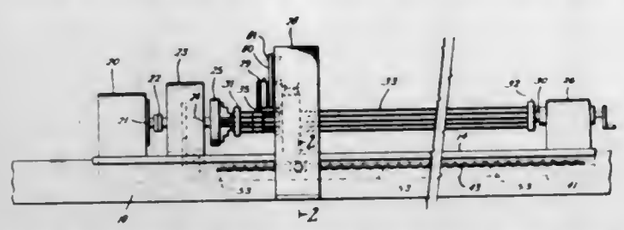
Original application Dec. 6, 1960, Ser. No. 74,097, now Patent No. 3,196,223, dated July 20, 1965. Divided and this application Nov. 10, 1964, Ser. No. 410,144
2 Claims. (Cl. 200—166)



1. As an article of manufacture, a rigid support of insulating material having thereon a common conducting strip and a row of fixed contacts on each side of said strip, said rows extending parallel with said strip and said fixed contacts being uniformly spaced from said strip and from each other.

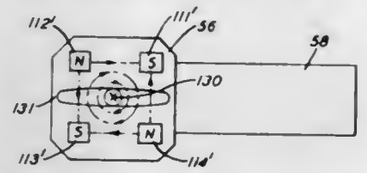
3,275,783
VACUUM RELAY HAVING IMPROVED CONTACT ELECTRODES
Victor E. De Lucia, 927 Euclid Ave., Santa Monica, Calif.
Filed May 17, 1965, Ser. No. 456,318
7 Claims. (Cl. 200—166)

5. In a vacuum relay which includes an envelope, a magnetic member mounted in said envelope, and an armature movably mounted on said magnetic member, the combination of: a first electrically conductive pin extending through the envelope into the interior of the envelope, at least the inner extremity of said pin composed of copper infiltrated tungsten; a second electrically conductive pin extending through said envelope into the interior of said envelope; a movable contact mounted on said armature in electrical contact with said second pin and in position to make selective contact with said first pin upon movement of said armature; and a copper infiltrated button mounted on said movable contact in position selectively to engage the extremity of said first pin.



3,275,784
INDUCTION HEATING COIL
John Merrett, Gerrards Cross, England, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Filed July 12, 1963, Ser. No. 294,628
Claims priority, application Great Britain, Aug. 9, 1962, 30,614/62
4 Claims. (Cl. 219—10.79)

1. A coupling coil for inducing eddy currents in surfaces such as the bottom walls of pots of different sizes to heat the pots, said coil comprising at least two coil sections one within the other to cover different areas of the surface of the pot being heated and wound spirally in opposite directions, means connecting the inner end of the inner coil section and the outer end of the outer coil section to one terminal of the source of current, and means connecting the outer end of the inner coil section and the inner end of the outer coil section to the other terminal of the source of current, whereby said coil sections are connected in parallel to a source of current.

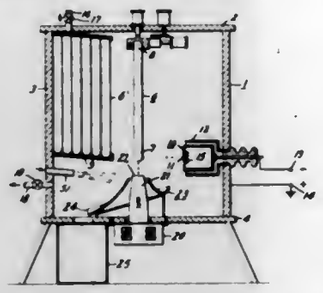


3,275,785
METHOD AND APPARATUS FOR MANUFACTURING WELL SCREENS
Hill D. Wilson, 6122 Longmont, Houston, Tex.
Filed Oct. 17, 1963, Ser. No. 316,882
5 Claims. (Cl. 219—56)

1. Apparatus for manufacturing well screens, comprising mandrel means comprising an axial shaft having spaced flanges thereon for supporting a plurality of circumferentially spaced parallel longitudinal metal ribs about a common axis, said ribs extending between said flanges spaced outwardly of said shaft, means for rotating said ribs about said axis, means for moving said ribs longitudinally during said rotation thereof, fixed means for winding metal wire means helically about said ribs while said ribs are moving longitudinally and rotating, longitudinally fixed anvil means coaxial with axis and rotatable with said ribs in contact with the inner side of

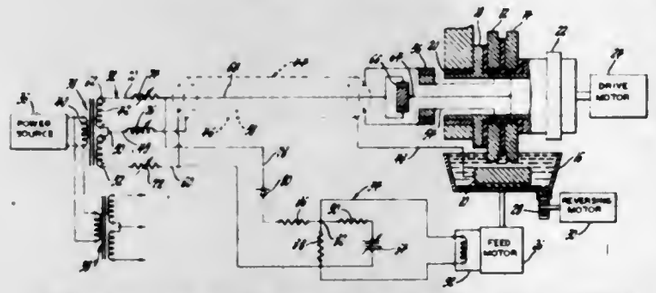
each rib, welding head means contacting said wire at each contact thereof with a rib during said winding thereof, and means for supplying electric current between said head means and anvil and through said wire and rib at each point of contact therebetween, said shaft being splined, said anvil having a portion engaged with said splines and slidingly contacting the inner sides of said ribs and having a portion extending exteriorly of said ribs and being electrically grounded.

3,275,786
HIGH SPEED BUTT WELDING METHOD AND APPARATUS
Everett H. Cushman, South Plainfield, N.J., assignor to Air Reduction Company, Incorporated, New York, N.Y., a corporation of New York
Filed Jan. 15, 1965, Ser. No. 425,811
13 Claims. (Cl. 219—60)



1. The method of electric arc fusion welding of a substantially straight seam in non-magnetic material, using a substantially non-consuming arc electrode relatively progressively moved along the seam to be welded, which method comprises the steps of
(a) applying magnetic forces in the arc zone to shape the arc flame into a form elongated along a given long axis and constricted in the direction perpendicular to said axis,
(b) shielding the arc zone from the ambient atmosphere with inert shielding gas to which has been added 5 to 30 percent of hydrogen,
(c) applying the thus shaped and shielded arc to the seam with the arc flame aligned with its long axis along the line of the seam, and
(d) applying electric power to the arc at a rate suitable to secure complete penetration of the weld through the work.

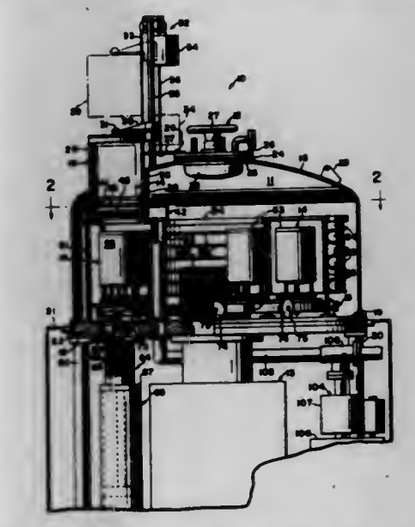
3,275,787
PROCESS AND APPARATUS FOR PRODUCING PARTICLES BY ELECTRON MELTING AND ULTRASONIC AGITATION
Sterling P. Newberry, Schenectady, N.Y., assignor to General Electric Company, a corporation of New York
Filed Dec. 30, 1963, Ser. No. 334,532
20 Claims. (Cl. 219—69)



1. A process for producing uniformly small spherical particles of controlled size in the range of 10 to 100 microns diameter comprising the steps of

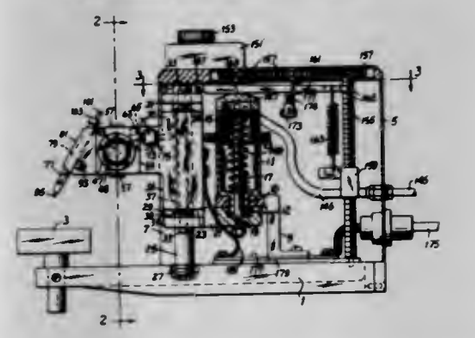
directing an electron beam at a body of material contained within a housing wherein the material is characterized by the property of existing in liquid state at pressures below atmospheric,
heating a selected portion of the material to a desired temperature by subjecting that portion to sufficient electron beam irradiation to produce a thin molten surface thereon of one to several particle diameters of the material, and

agitating the thin molten surface of the material at ultrasonic frequency and a controlled amplitude of vibration of magnitude greater than several particle diameters whereby uniformly small spherical particles of controlled size in the range of 10 to 100 microns diameter are emitted therefrom having a size being determined only by the acceleration of the agitated molten surface of material and surface tension and density characteristics of the particular material being processed.



3,275,788
ELECTRICAL DISCHARGE MACHINING APPARATUS
Millard A. Ferguson, Utica, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed Nov. 21, 1963, Ser. No. 325,394
14 Claims. (Cl. 219—69)

1. In electrical stock removal apparatus, the combination of a conductive workpiece, a pair of conductive cutting tools each spaced from the workpiece so as to form a machining gap therebetween, and means simultaneously supplying voltages across the gaps of opposite polarity for rendering the gaps conductive so that electrical stock removal discharges occur thereacross, the supplying means including means operative when one of the gaps is nonconductive to increase the voltage across the nonconductive gap thereby facilitating the rendering of the nonconductive gap conductive.



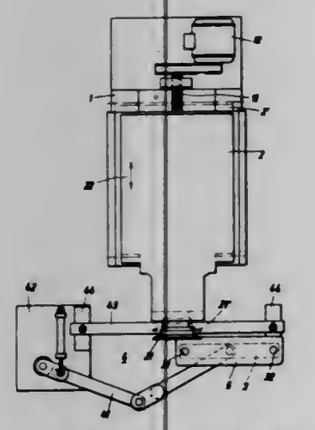
3,275,789
VACUUM BRAZING SYSTEM
William A. Lloyd, San Jose, and Renn Zaphiropoulos, Los Altos, Calif., assignors to Varian Associates, Palo Alto, Calif., a corporation of California
Filed Sept. 9, 1963, Ser. No. 307,734
6 Claims. (Cl. 219—72)

1. A vacuum brazing system comprising: an evacuable chamber having an entrance-exit port; means for evacuating said chamber in communication with said chamber; a plurality of spaced stations within said chamber; means for receiving articles to be brazed; a movable table serving to carry said article receiving means; a vacuum lock device comprising a moveable entrance-exit chamber having an open end for receiving said article receiving means therein; said entrance-exit chamber adapted to be mounted in gas tight communication to said evacuable chamber with said open end aligned with said entrance-exit port; said entrance-exit chamber forming, when so mounted a continuous vacuum wall with said evacuated chamber;

door means for receiving thereon said article receiving means for isolating said entrance-exit chamber from said evacuated chamber and forming when closed a gas tight barrier therebetween; said door means mounted to transport said article receiving means between said entrance-exit chamber and said moveable table; and means for evacuating said entrance-exit chamber in gas tight communication therewith; means for moving said table whereby the article receiving means are sequentially indexed to each of said stations; and said stations including a brazing station, and at least one cooling station.

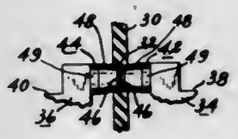
3,275,790
WELDING APPARATUS
John D. Helms, Dallas, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex., a corporation of Delaware
Filed Aug. 14, 1963, Ser. No. 303,213
6 Claims. (Cl. 219—78)

1. A step-welding mechanism comprising a first guide, a carrier slidable on the first guide, a pair of guide means on the carrier parallel to the first guide, a pair of electrodes, arms oppositely slidable on said guide means and rotatable thereon, each arm carrying an electrode, a compensating lever pivoted to said carrier between said arms, the ends of said lever being pivoted to the arms respectively to effect opposite relative movements therebetween on the carrier, an adjusting screw connected transversely to the carrier for rotary but non-axial movements therewith, said screw having threads



of opposite pitches, nuts on said threads, said nuts having connections with said arms adapted to prevent rotation of the nuts relative to the arms but permitting opposite sliding motions of the arms with respect to the screw, and means for turning the screw to move the arms through the nuts.

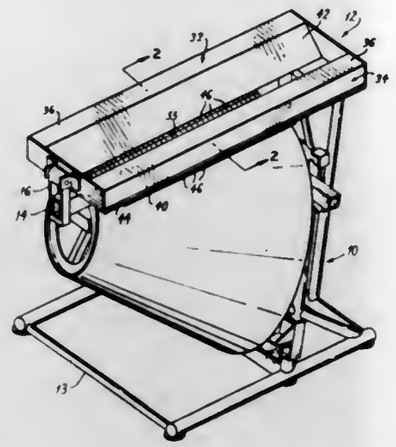
3,275,791
METHOD FOR WELDING AT LEAST ONE MEMBER TO A SUPPORT SUCH AS A TIME-PIECE DIAL AND DIALS OBTAINED THROUGH SAID METHOD
Andre Vogt, La Chaux-de-Fonds, Switzerland
Filed July 3, 1963, Ser. No. 292,637
Claims priority, application Switzerland, May 19, 1959, 73,406/59; Feb. 23, 1960, 2,013/60
14 Claims. (Cl. 219—103)



4. A method for welding a shaped time symbol on a small finished watch dial by means of elastic means, comprising the steps of providing a watch dial, securing temporarily a plurality of conductive symbols on a common annulus in the relative positions said symbols are to occupy on said dial, said annulus having resilient portions urging said symbols toward said dial, laying the symbols on said dial at the location they are to occupy on said dial, urging the annulus and symbols toward the dial, applying a welding current across the symbols and the dial to melt a part of the symbols adjacent the dial and thereby allow the elastic means to shift the symbols further toward the dial to compensate for the shrinking produced by said melting, and removing the elastic means.

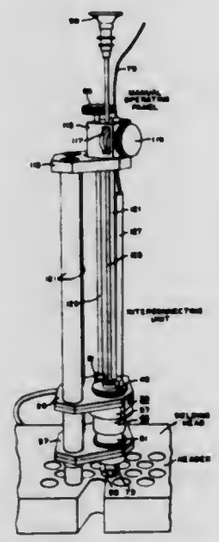
3,275,792
SEAM WELDING MACHINE
Eugen Hirsiger, Zurich, Switzerland, assignor to H. A. Schlatter AG, Zollikon, Zurich, Switzerland
Filed Feb. 10, 1964, Ser. No. 343,777
Claims priority, application Switzerland, Mar. 2, 1963, 2,695/63
5 Claims. (Cl. 219—82)

1. A seam welding machine comprising:
a work holder;
guide means for guiding said work holder along a first predetermined path corresponding to the seam to be welded;
two electrode rollers having parallel axes;
a structure supporting said electrode rollers; and
mounting means mounting said guide means with said work holder and said electrode rollers with said supporting structure to be movable relative to each other along a second path parallel to the axes of said electrode rollers between an operative position in which the electrode rollers engage a workpiece on the work holder and a loading or unloading position in which said work holder and said electrode rollers are withdrawn from each other.



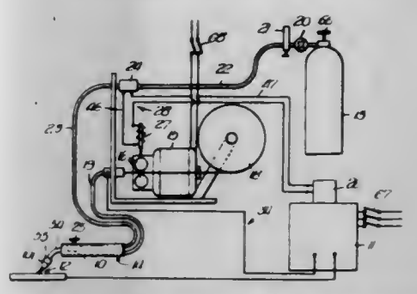
3,275,793
METHOD FOR ASSEMBLING CELL COMPONENTS IN STORAGE BATTERIES
Richard Frischkorn, West Lafayette, and Max E. Humes, Muncie, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed June 9, 1965, Ser. No. 462,529
2 Claims. (Cl. 219—94)

1. In a method for making a fluid tight, low resistance electrical connection through the dividing wall between two independent cell compartments of an electric storage battery, the steps comprising; providing a hole through the dividing wall between two independent cell compartments, providing opposed connector elements having tapered shanks and non-mating end portions wherein the diameter of said shanks permits limited entry of the shanks into said hole, entering said tapered shanks into said hole from opposite sides of said dividing wall so that the non-mating end portions thereof contact one another, applying force simultaneously from opposed directions to said shanks for causing said non-mating ends to contact one another, passing a welding current through the junction of the opposite ends of said shanks sufficient to cause resistance welding of said shanks one to another for forming a unitary electrical connection therebetween and substantially simultaneously causing said tapered shanks to seal against the walls of said hole and to distort within the hole for filling same and to deform at opposite sides of the wall for forming an additional seal thereagainst by maintaining said force application, eliminating said welding current and maintaining said force application at opposite ends of said shanks until the welded connection therebetween has cooled sufficiently to maintain the fluid tight seal with said wall.



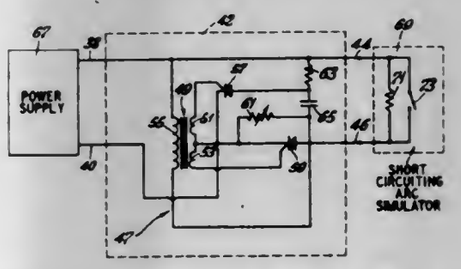
3,275,794
APPARATUS FOR WELDING SHEET MATERIAL
William Dubusker, Creve Coeur, Frank S. Pogorzelski, Bellefontaine Neighbors, and Clem W. Fridrich, St. Ann, Mo., assignors to McDonnell Aircraft Corporation, St. Louis County, Mo., a corporation of Maryland
Continuation of application Ser. No. 153,624, Nov. 20, 1961. This application Nov. 6, 1963, Ser. No. 322,565
3 Claims. (Cl. 219—125)

1. Apparatus for fusion welding adjacent edges of thin weldable sheet material comprising a support member, heat condutive means disposed upon said support member and formed with an elongated recess separating surfaces for receiving the edges of sheet material to be welded, a plurality of clamping fingers cooperable with said receiving surfaces for the sheet material, each of said fingers having an end portion engageable upon the sheet material placed upon said receiving surfaces of said heat conductive means, fixed structure spaced from said heat conductive means and extending on each side thereof, a plurality of spaced threaded elements carried by said fixed structure in rows on opposite sides of said heat conductive means, each clamping finger pivotally engaging one of said threaded elements intermediate its end portions such that each finger is pivotally supported between its said end portions on a threaded element, opposed means to positively actuate said fingers including first in-



flatable members engaged upon said fingers between the threaded elements and said first mentioned end portions and second inflatable members engaged upon said fingers between said threaded elements and the opposite end portions, means for individually adjusting the position of each finger on its associated threaded element, and fusion welding means adjacent said fixed structure having an electrode projecting into welding position at the sheet material edges.

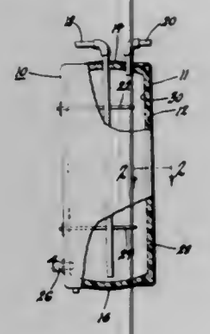
3,275,795
WELDING APPARATUS
Alexander Bosna, West Chester, Lewis D. Sorg, Finleyville, and William F. Schmidt, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Sept. 25, 1963, Ser. No. 311,374
10 Claims. (Cl. 219—125)



1. Apparatus for producing a weld in a relatively inaccessible region comprising a conductor of light extending into said region in light-receiving and conducting relationship with said region, means for illuminating said region mounted on the end of said conductor adjacent said region, an arc-welding means connected to said conductor, and means connected to said arc-welding means for moving said arc-welding means into welding relationship with different points of said region each of which is visible through said conductor.

3,275,796
ARC WELDING CONTROL SYSTEM
Arthur A. Bernard, Beecher, and Richard A. Bernard, Flossmoor, Ill., assignors to Beecher Products Company, Beecher, Ill., a corporation of Illinois
Filed Nov. 19, 1965, Ser. No. 508,689
16 Claims. (Cl. 219—130)

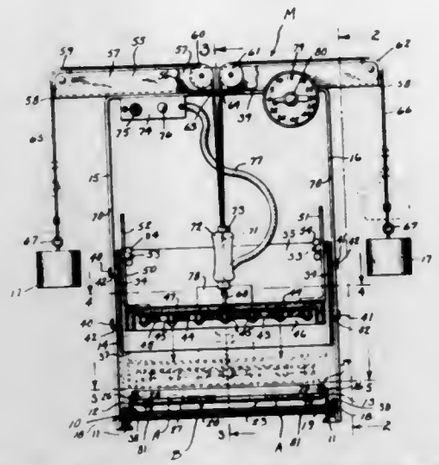
1. In gas-shielded arc welding apparatus which includes a welding gun for manually or mechanically directing the welding operation along the course of welding, apparatus for feeding consumable electrode from a remote source through a conduit to and through the welding gun to the welding arc, a welding current circuit for energizing said electrode with welding current from a remote welding current source, and a gas transmission line for conducting shielding gas under pressure from a remote source to and through the welding gun to the welding arc, the combination therewith to provide a control system for operating the arc welding apparatus comprising: a manually operated gas valve incorporated with said welding gun and connected in said gas transmission line for feeding shielding gas when open and stopping the flow of shielding gas when closed; and a remote gas-pressure-operated electrical switch having a pressure connection with said gas transmission line at a location along said gas transmission line and being electrically connected for energizing and de-energizing said electrode feeding apparatus and said welding current circuit, said gas-pressure-operated electrical switch being responsive to the pressure level at said location along said gas transmission line when said gas valve is open to energize said electrode feeding apparatus and said welding current circuit, said gas-pressure-operated electrical switch being responsive to the pressure level at said location along said gas transmission line when said gas valve is closed to de-energize said electrode feeding apparatus and said welding current circuit.



3,275,797
WORK-IN-CIRCUIT METAL ARC WELDING
August F. Manz, Newark, N.J., assignor to Union Carbide Corporation, a corporation of New York
Filed May 13, 1964, Ser. No. 366,949
3 Claims. (Cl. 219—137)

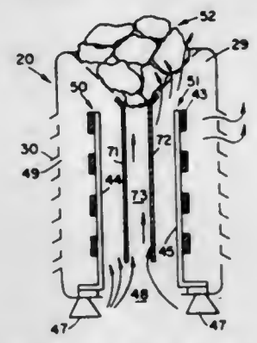
1. Short-circuiting type metal transfer arc welding which comprises energizing a short-circuiting type metal transfer arc between a consumable metal electrode and

work to be welded while feeding such electrode toward the work, with welding power derived from a source having a volt-ampere characteristic such that the maximum value of current at each short circuit transfer is less than the arc current between such transfers, whereby objectionable spatter is minimized.



3,275,798
DOMESTIC ELECTRIC APPLIANCE
John C. Martin, Kettering, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed Aug. 30, 1963, Ser. No. 305,584
7 Claims. (Cl. 219—312)

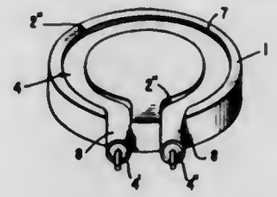
1. A water heater tank structure having good structural strength and good corrosion resistant and insulating qualities consisting of a relatively thin, flexible, preformed metal sheet, said sheet forming wall surfaces normally movable relative to each other and capable of forming a strong bond with polyurethanes, and a heat insulating material consisting of a substantially rigid closed cell closely cross linked polyurethane foam of improved strength having the cells thereof containing essentially only a permanently retained fluorohalogenated saturated aliphatic hydrocarbon substantially insoluble in the foam, the walls of said cells having an improved seal for permanently retaining said fluorohalogenated hydrocarbon, said metal sheet and polyurethane foam forming a strong coextensive permanent bond in situ throughout their areas of contact to form a unitary structure wherein said foam provides substantial rigidifying support for said sheet, and said polyurethane foam on the side thereof opposite said areas of contact with said metal sheet forming a barrier to prevent the penetration of water in said tank into corroding contact with said metal sheet.



3,275,799
HEAT SHRINKING APPARATUS
Henry E. Meltzer, 1745 Fleet St., Racine, Wis.
Filed Oct. 17, 1963, Ser. No. 316,920
6 Claims. (Cl. 219—342)

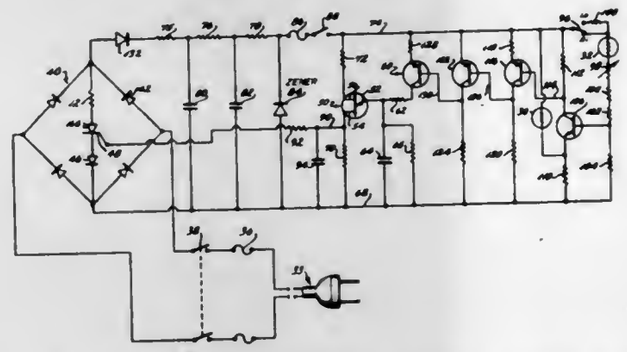
1. A heat shrinking apparatus for shrinking materials about the articles to be treated comprising, a substantially flat rectangularly shaped base, a removable article holding tray of a size and configuration to fit on said base, a cage carried by said base vertically adjustable to a lower operative position and an upper inoperative position, said cage including vertically extending front, rear and side walls of a size and configuration in its closed operative position to completely surround said tray and to rest on said base adjacent the peripheral edges thereof, a substantially horizontally disposed pan forming a partition within said walls of said cage, means for adjustably securing said pan within said walls for varying the height of the pan in relation to the lower end termination of said walls, heating elements carried by said pan, means connecting said heating elements to a source of electrical current, means for facilitating the moving of said cage to its closed operative position over said tray and base and to its open inoperative position away from said tray and base including a pair of spaced vertically extending side rails carried by said base, a cross-beam connecting the upper end terminations of said side rails, a handle and cables secured to the upper surface of the pan, pulleys carried by said cross-beam and extending beyond the

outer surface of the respective side rails, said cables being trained over said pulleys, counterweights on the end termination of each cable, the combined weight of the cage and pan being substantially the same as the combined weight of the counterweights, and said handle and cables being secured to said pan at the transverse center thereof but offset from the longitudinal center thereof.



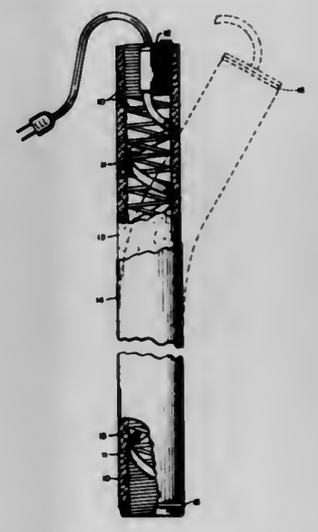
3,275,800
ELECTRIC HEATER FOR USE IN A SAUNA BATH
Lauri Juhani Kuoppamaki and Eero Olavi Kuoppamaki, both of 2527 Jackson St., Arlington, Calif.
Filed June 28, 1963, Ser. No. 291,490
1 Claim. (Cl. 219—367)

An electric heater for use in a sauna bath comprised of a plurality of resistive heating elements deposed in a horizontal attitude and arranged in first and second columns; an enclosure surrounding said heating elements and having four faces, of which a first face and a second face are substantially parallel to said first and second vertical columns of resistive heating elements, respectively, and contain a multiplicity of louvers forming air outlets whereby all radiant energy passing out of said enclosure is directed in a downwardly direction said enclosure having an opening at the bottom as an air inlet and means in the enclosure forming an open top chamber adapted to receive a plurality of rocks, the rock receiving chamber means having a perforated bottom wall and a vertical partition comprised of first and second panels which are substantially parallel to said first and second vertical faces of the enclosure respectively defining therebetween first and second cavities respectively wherein said first vertical column of resistive heating elements is located within said first cavity and said second vertical column of heating elements



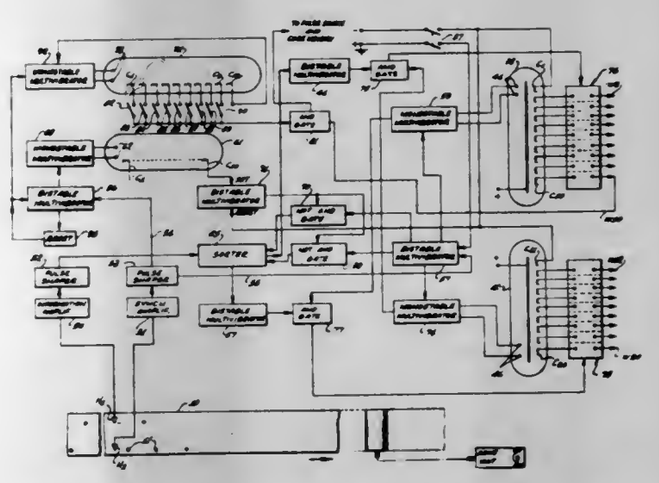
is located within said second cavity and said first and second panels defining therebetween a third cavity devoid of heating elements in fluid communication with said opening in the bottom of said enclosure and said perforations in the bottom wall of the rock receiving chamber so as to provide an air circulation channel to mitigate overheating of the first and second vertical columns of resistive heating elements.

3,275,801
ELECTRICAL HEAT EXCHANGER
Walter A. Churchill, 4 Hillcrest Road, Danvers, Mass.
Original application June 17, 1964, Ser. No. 375,793, now Patent No. 3,168,775, dated Feb. 9, 1965. Divided and this application Dec. 9, 1964, Ser. No. 417,120
2 Claims. (Cl. 219—457)



1. A heat exchanger comprising a metallic base plate comprising an outer circular peripheral portion, said base plate having a circular groove therein including two terminal portions adjacent each other, two mutually adjacent parallel grooves in said base plate extending inwardly from said outer circular peripheral portion and into said two terminal portions, an elongated electrical heater disposed in said circular groove and extending from said circular groove into said two mutually adjacent parallel grooves, said circular groove and said parallel grooves each comprising parallel walls, said walls as seen in cross-section being defined by rectilinear parallel lines, said circular groove and said two mutually adjacent parallel grooves further comprising oppositely disposed curved wall portions intersecting said parallel walls and forming shoulders therewith, said electrical heater being in continuous and intimate contact with said wall portions and with the bottoms of said circular groove and of said parallel grooves, said shoulders in said circular groove and in said two adjacent parallel grooves being effective to prevent accidental dislodgment of said electrical heater from each of said grooves.

3,275,802
PULSED HEATING SYSTEM
Edward J. Vandivere and Lawson M. Phyfe, Santa Fe, N. Mex., assignors to Reynolds Electrical & Engineering Co., Inc., Santa Fe, N. Mex.
Filed Nov. 8, 1963, Ser. No. 322,318
11 Claims. (Cl. 219—499)

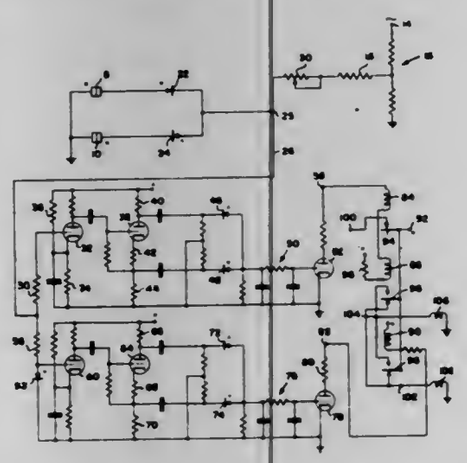


2. A heating system comprising a heater, a direct current pulsating source feeding said heater, a first means sensitive to the temperature of said heater to control the repetition rate of the pulses applied to the heater, and other means of less sensitivity than the first means, sensitive to ambient temperatures uninfluenced by said heater to additionally control the average temperature of the heater.

3,275,803
PIPE HEATING APPARATUS
Cecil W. True, 825 S. Maple, Watertown, S. Dak.
Filed Feb. 6, 1964, Ser. No. 343,008
4 Claims. (Cl. 219—535)

1. Apparatus for preventing liquid carrying pipes from freezing including
supporting means in the form of helically wound wire for encircling a pipe,
electric heating means directly carried by the supporting means for heating the pipe,
a layer of thermal insulation covering the heating means, and
flexible means for encasing the insulation layer.

3,275,804
COMPUTING APPARATUS
Theodore R. Folsom, La Jolla, and Richard A. Cramer, Solana Beach, Calif., assignors to The Regents of the University of California
Filed Oct. 24, 1960, Ser. No. 64,566
5 Claims. (Cl. 235—61.6)



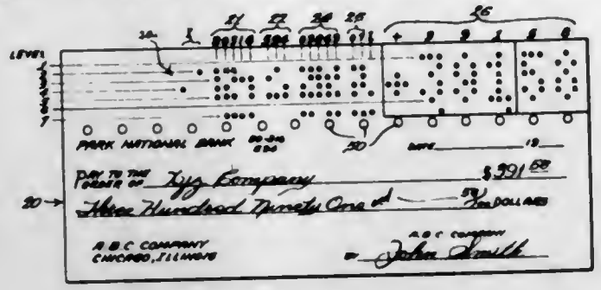
1. In a data transfer system, the combination of: dual track tape means to carry a recording of synchronizing pulses and information pulses, wherein a single synchonizing pulse precedes the first information pulse past a pre-

determined point; pickup devices for the respective tracks; amplifier and pulse shaping networks coupled to each pickup device; a pair of multi-cathode glow tubes; gating devices coupled to cathodes of said glow tubes; a third multi-cathode glow tube; a set-reset multivibrator coupled to the last of the cathodes of said third tube; gate means connected between said set-reset multivibrator and the amplifier and pulse shaper network for the information pulses; a connection from the last cathode of one of said pair of glow tubes to said set-reset multivibrator; means coupled to the amplifier and pulse shaper network for the synchronizing pulses for controlling the state of conduction of said third tube; and respective means coupled to said gate means to establish gating pulses to be passed by the operable gating device.

3,275,805
DATA TRANSMISSION SYSTEM

Fred M. Mayes and Jack Weir Jones, Richardson, Tex., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey

Original application Sept. 21, 1956, Ser. No. 611,291, now Patent No. 3,034,217, dated May 15, 1962. Divided and this application Mar. 5, 1962, Ser. No. 177,554
7 Claims. (Cl. 235—61.11)



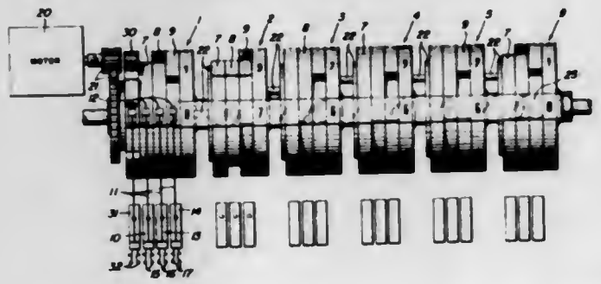
1. A data transmission system comprising a first transducer means responsive to information on a first channel, a second transducer means responsive to information on a second channel, first circuit means connecting one side of said first transducer means to a terminal and the other side to ground, second circuit means connecting said second transducer means in parallel with said first transducer means, means providing an alternating potential to said terminal, first rectifying means connected in series with said first transducer means for permitting the passage through said first circuit means of only the positive portion of said alternating potential, second rectifying means connected in series with said second transducer means for permitting the passage through said second circuit means of only negative portions of said alternating potential, and means for detecting the signal at said terminal.

3,275,806
BUSINESS RECORD BEARING CODED INDICIA

James L. Quinn, Chicago, and John E. Jones, Wilmette, Ill., assignors to Cummins-Chicago Corp., Chicago, Ill., a corporation of Illinois

Original application Oct. 20, 1958, Ser. No. 768,436, now Patent No. 3,033,449, dated May 8, 1962. Divided and this application Mar. 2, 1962, Ser. No. 176,953
4 Claims. (Cl. 235—61.12)

2. A record medium having indicia thereon to present characters according to two binary position codes, the first code being a plural-line, rectangular field code with indicia selectively applied at different stations to make each character visibly legible, the second code being a single-line code with indicia selectively applied at stations within a single line to make each character visibly illegible, each group of characters in the first and second

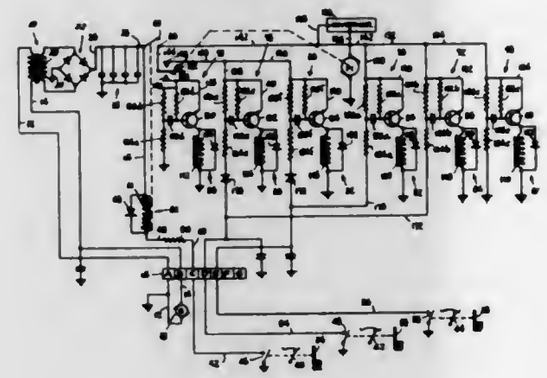


codes being respectively preceded by an identifying prefix character in the second or first code, each different character being represented by indicia located at the same horizontal levels in both said plural-line code and said single-line code.

3,275,807
ELECTRICAL APPARATUS

Samuel D. Harper, Valley Forge, Pa., assignor to Honeywell Inc., a corporation of Delaware

Filed Mar. 15, 1963, Ser. No. 265,458
1 Claim. (Cl. 235—92)



A binary-coded counter comprising a plurality of substantially cylindrical drums which are coaxially and independently rotatably supported, each of said drums having a plurality of circumferential tracks along the peripheral surface thereof, a plurality of visually identifiable representations equally spaced along one of said circumferential tracks on said peripheral surface of each said drum, said plurality of circumferential tracks including a plurality of parallel cam-surface tracks arranged adjacent to said track of visually identifiable representations, each of said cam tracks dividing the periphery of each of said drums into a plurality of separate disc-like sections having a plurality of equal size segments comprising a succession of alternately raised and depressed surfaces, each of said cam tracks having a different number of raised surfaces whereby the equal size segments in each section are of different size relative to the segments in adjacent sections, said raised and depressed surfaces of said cam track being operative to produce a unique indication of each visually identifiable representation on a respective one of said drums, driving means for causing a first one of said plurality of drums to revolve around the axis thereof at a predetermined rate, intermittent driving means arranged to selectively drive the remaining drums in succession to advance a drum by only one visual representation upon a complete revolution of an associated preceding drum, switch means responsive to said raised and depressed surfaces of said cam tracks for each drum to produce a switch contact closure pattern representative of said unique indication produced by said raised and depressed surfaces, at least one of said drums including a separate cam surface track, and further switch means arranged to cooperate with said separate track, said cam

surface of said separate track providing a synchronizing function by actuating said further switch means only during a time when said plurality of cam tracks on said drum have completed a switch actuation operation of said first-mentioned switch means associated with said plurality of cam tracks whereby spurious contact closure patterns are not produced during operation of said first-mentioned switch means.

3,275,808
CORRELATING TIME AND EVENT RECORDER

Knud J. Knudsen, Middlebury, Conn., assignor to Lewis Engineering Company, Naugatuck, Conn., a corporation of Connecticut

Filed Aug. 27, 1962, Ser. No. 219,558
15 Claims. (Cl. 235—92)

2. A timing and event recorder comprising in combination:

(a) a pair of electrically-operated counters capable of independent advance,

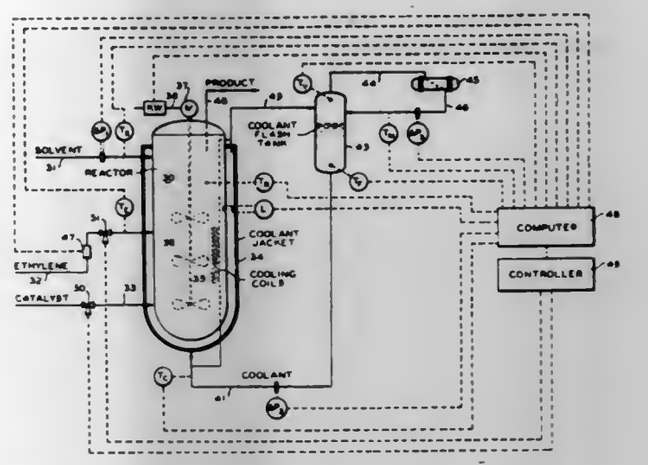
(b) means including a power-operated timing switch adapted to repeatedly open and close, for periodically advancing one of said counters to indicate elapsed time,

(c) means including an automatically controlled switch, for simultaneously rendering operative said first-named means and also the other of said counters,

(d) and reversibly - operative condition - responsive means for reversibly actuating said automatically controlled switch,

(e) a second pair of electrically-operated counters capable of independent advance, one of said second pair of counters being arranged for periodic advance by said means which includes the timing switch, to indicate elapsed time,

(f) means under the control of said automatically controlled switch and including a second automatically controlled switch, for simultaneously rendering operative said second pair of counters, and



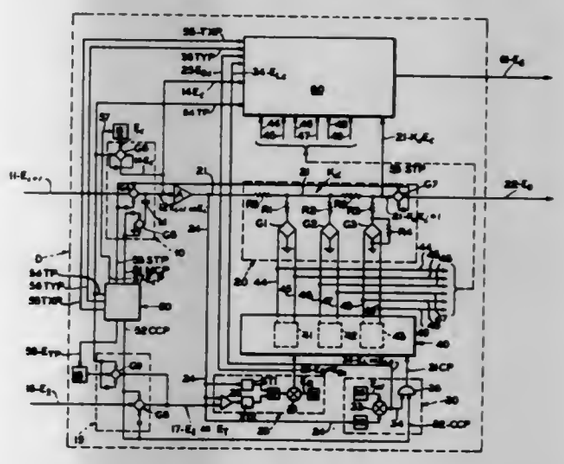
(g) a second reversibly-operative condition-responsive means for reversibly actuating said second automatically controlled switch.

3,275,809
MEASUREMENT AND CONTROL OF POLYMERIZATION REACTIONS

Ernest D. Tolin and Dale A. Fluegel, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware

Original application Dec. 4, 1957, Ser. No. 700,612, now Patent No. 3,105,896, dated Oct. 1, 1963. Divided and this application Mar. 4, 1963, Ser. No. 262,783
5 Claims. (Cl. 235—151.12)

1. In a polymerization process wherein the material to be polymerized and a catalyst are directed to a polymerization zone and the resulting products are removed from the zone, a control system comprising means to measure the heat supplied to said zone, means to measure the heat removed from said zone, means to measure the difference between the heat supplied and the heat removed, means responsive to said means to measure the

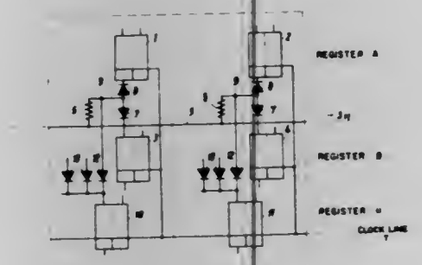


difference to control the operation of the process to tend to produce polymer at a uniform rate, means to measure the rate of temperature change of said zone, and means responsive to said means to measure the rate of temperature change to adjust said means to control.

3,275,810
SELF-TESTING MEANS FOR COMPUTER CONTROL SIGNAL ATTENUATING DEVICES

Kurt Moses, Dumont, N.J., and Ernest Hartog, New York, N.Y., assignors to The Bendix Corporation, Teterboro, N.J., a corporation of Delaware

Filed Nov. 7, 1962, Ser. No. 236,065
16 Claims. (Cl. 235—151.31)



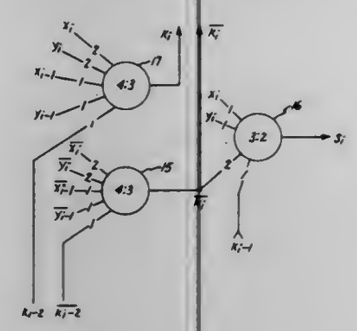
1. A device of the kind described comprising programming means, a source of signals controlled by the programming means, an attenuating network with operating modes, computer means connected to the network for controlling the network operating mode according to a digital count, said network being connected to the source and providing an attenuated signal according to the digital count, a matrix having gated transmission lines with attenuation means connected to the computer means for controlling the transmission lines to provide an attenuated signal according to the digital count, and means con-

nected to the transmission lines and to the network for comparing the attenuated signals from the network and from the matrix.

3,275,811
BINARY REGISTER CONTROL UNIT

Wolfgang Händler, Volklingen-Geislautern, Germany, assignor to Telefunken Patentverwertungs-G.m.b.H., Ulm (Danube), Germany

Filed Sept. 10, 1962, Ser. No. 222,466
Claims priority, application Germany, Sept. 13, 1961, T 20,752
8 Claims. (Cl. 235—156)

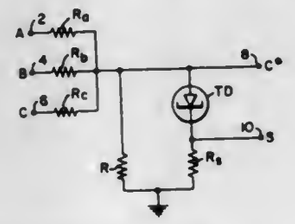


1. An arithmetic unit of a digital computer having several arithmetic registers which are connected with each other for carrying out microoperations, comprising at least one connection filter, each including a connection register and a logical connection network for controlling the carrying out of microoperations in the respectively coordinated binary positions in accordance with the contents of the connection register.

3,275,812
THRESHOLD GATE ADDER FOR MINIMIZING CARRY PROPAGATION

Clarence L. Coates, Jr., Scotia, and Philip M. Lewis II, Schenectady, N.Y., assignors to General Electric Company, a corporation of New York

Filed July 29, 1963, Ser. No. 298,240
13 Claims. (Cl. 235—173)



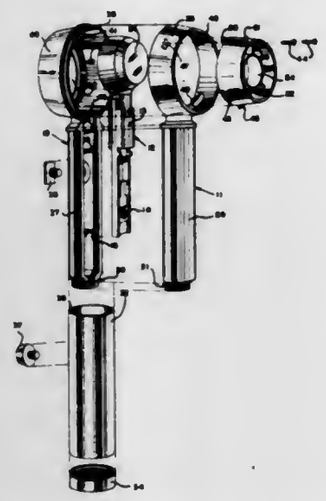
1. An adder comprising a plurality of stages for generating the sum of two numbers from the lowest order level digit to the highest order level digit respectively, the ith one of said stages summing a pair of digits x_1 and y_1 to produce a sum s_1 and including a carry producing threshold means receiving a plurality of input signals and producing a carry output signal k_1, means coupling the ouput of said i^{th} stage, carry producing threshold means to the input of the $(i+1)^{th}$ stage, said i^{th} stage carry producing threshold means having a threshold value in the gap $U:L=2^m:2^m-1$, wherein U is the smallest total value of input signals for which the threshold is exceeded, L is the largest total value of input signals for which the threshold is not exceeded, and m is the order of the ith stage within a predetermined grouping of said stages, said carry producing threshold means implementing inputs from the ith and lower order stages according to the expression,

$$\sum_{k=0}^{m-1} 2^{m-k-1}(x_{i-k}+y_{i-k})+k_{i-m}$$

3,275,813
FULL BINARY ADDER USING ONE TUNNEL DIODE

Auseklis Brastins, Swissvale, Pa., assignor to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Oct. 22, 1962, Ser. No. 232,058
2 Claims. (Cl. 235—176)

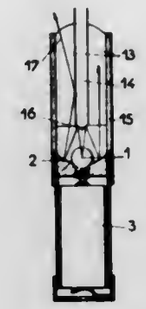


1. A full binary adder comprising:
a series circuit including a tunnel diode and a resistor;
means for applying input signals to said series circuit;
resistance means connected in parallel with said series circuit;
output means connected to said resistor for sensing the current in said series circuit; and
output means connected across said series circuit for sensing the voltage across said series circuit.

3,275,814
EXAMINATION LIGHT

Ronald K. Meyer, 25 Janes St., Mill Valley, Calif.

Filed Aug. 8, 1963, Ser. No. 300,875
8 Claims. (Cl. 240—2.18)

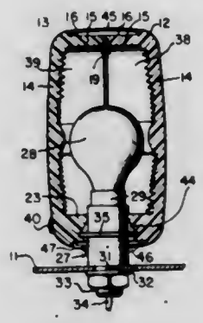


1. In a lighting device the improvement comprising: a two-part longitudinally split sleeve, each of said parts having an integrally formed circular lamp housing at one end, the other end of said split sleeve defining a continuous helical thread when the two parts thereof are placed in mated relationship; a sleeve member for receiving said split sleeve therein; and a threaded cap matable with the threaded ends of said split sleeve.

3,275,815
PROTECTIVE DEVICE SUCH AS UMBRELLA, SUNSHADE OR THE LIKE

Anne-Marie Golaz, née Petroff, Le Barroux, France, and Gérard Anatole François Marie Joseph Cordonnier, 3 Rue de la Marne, Ville d'Avray, France

Filed Sept. 30, 1963, Ser. No. 312,746
Claims priority, application France, Oct. 1, 1962, 910,863, Patent 1,354,814
6 Claims. (Cl. 240—6.42)

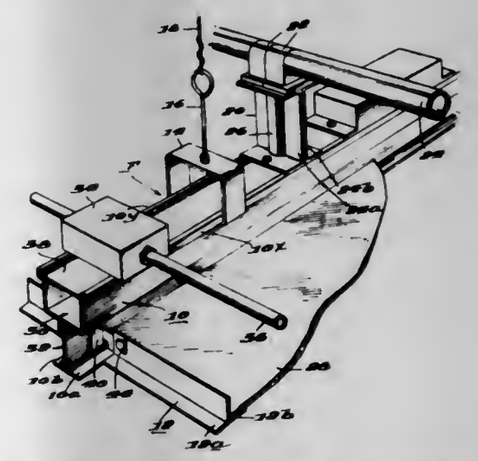


1. A protective device such as an umbrella, sunshade and the like, comprising a hollow handle assembly including a staff having a handle at its lower end and supporting an openable dome shaped shade formed of translucent fabric at its upper end, said staff having a bore whose wall surface is a reflector, means for passage of light out of said staff located in an upper portion of the staff, a light source including a lamp disposed coaxially in said hollow handle, a reflector assembly surrounding the lamp and directing light upwardly through said bore and a conical reflecting element located in said staff adjacent said means for passage of light out of the staff and directing light outwardly and upwardly against the underside of substantially the entire fabric dome when opened whereby the fabric diffuses part of the light downwardly and the remaining part is diffused through the fabric to render the protective device visible from a distance without the lamp being directly visible in a bright and dazzling manner.

3,275,816
LAMP ASSEMBLY FOR MOTOR VEHICLES

Ronald N. Brunger, Fort Wayne, Ind., assignor to International Harvester Company, Chicago, Ill., a corporation of New Jersey

Filed Feb. 25, 1964, Ser. No. 347,137
16 Claims. (Cl. 240—8.22)

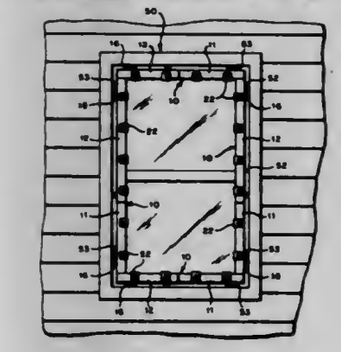


1. An automotive vehicle signal lamp construction comprising, in combination, generally plate-like light reflector means; a pair of substantially identical lenses arranged back-to-back, each lens being in abutting engagement with a peripheral edge portion of the said light reflector means, said light reflector means dividing the interior space defined by said lenses into two compartments; and a single lamp supporting member having a generally cylindrical shape carried by integrally formed portions of said lenses with the longitudinal axis thereof lying substantially in the plane of said light reflector means and having a socket disposed within both of said compartments adapted to receive a lamp bulb.

3,275,817
FRAMEWORK STRUCTURES FOR SUSPENDED CEILING AND LIGHTING SYSTEMS

Robert A. D. Schwartz, 81 Kemberlin Heights Drive, Oakland, Calif., and Stephen W. Lindheim, 1146 Keeler St., Berkeley, Calif.

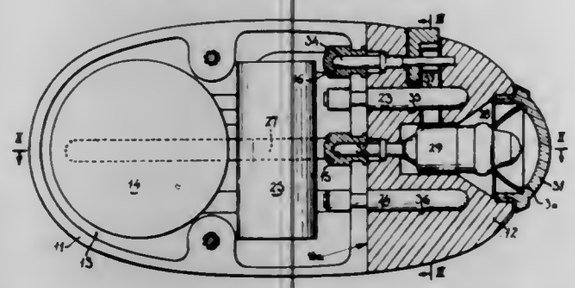
Application May 25, 1960, Ser. No. 31,619, now Patent No. 3,146,956, which is a division of application Ser. No. 625,065, Nov. 29, 1956, now Patent No. 2,956,150. Divided and this application Aug. 26, 1964, Ser. No. 392,215
6 Claims. (Cl. 240—9)



1. A ceiling framework member for an integrated ceiling and lighting system comprising an upper elongated portion of upright channel section defining an open-top electrical wiring raceway for enclosing wiring running to electrical lighting means in part supported from said member and a lower elongated portion of inverted T-bar section depending therefrom and including a planar vertical leg and a pair of coplanar horizontal flanges integral with and projecting outwardly and in opposite directions from the lower edge of said leg and providing ceiling-panel supporting means, the width of the channel section being substantially equal to the total width of said flanges.

3,275,818
DISPLAY MEANS

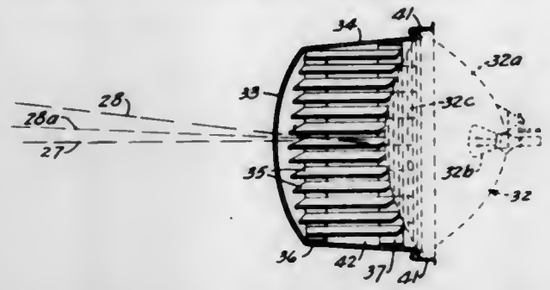
Robert G. Campbell, 4165 Greeby St., Philadelphia, Pa.



Filed Aug. 26, 1964, Ser. No. 392,133
4 Claims. (Cl. 240—10)

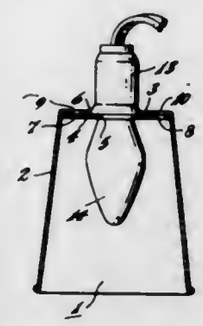
1. A display means comprising a plurality of pairs of nested modular elements, adapted to be mounted on a mounting surface at least partially vertical, each said pair being disposed in a fixed relationship to other said pairs but unattached to any other said pair, each said pair com-

prising two modular elements, each said element comprising an elongated rigid member having a longitudinal right angled bend therein, said bend forming a first leg and a second leg, each said leg having an inner surface facing said right angle and an outer surface facing away from said right angle, a single magnet on said outer face of said first leg close to one end of said element, a fastening aperture through said first leg close to the other end of said element, said elements of each said pair being nested together with the inner leg surfaces of one said element against the outer leg surfaces of said other element and said first leg of one element over said first leg of said other element, said fastening apertures in each said element being registered with each other, fastening means through said registered fastening apertures, each of said magnets on a said pair facing in the same direction and one of said fastening apertures in a said pair being a longitudinally elongated slot, said mounting surface including magnetic material, said first legs of all said elements in all said pairs being against said mounting surface so that the said magnets contact said magnetic material, and said second legs are of said elements of said pairs are provided with removeable, adjustable holding means thereon to hold a display.



3,275,819
POCKET ELECTRIC APPARATUS WITH CHARGEABLE BATTERY
Joseph J. Laurent, Rue Cap Dangelle, Lourdes, France
Filed July 5, 1957, Ser. No. 670,145
Claims priority, application France, July 11, 1956, 718,402
14 Claims. (Cl. 240—10.65)

1. A pocket electric apparatus with chargeable battery for operating an electrically controlled device such as a lamp, a razor or a fan, comprising a housing consisting of two interfitting elements, each of said elements having a separating surface, a recharging device for said chargeable battery comprising a rectifier and an electric circuit permanently interconnecting said chargeable battery and recharging device, said chargeable battery, recharging device and circuit being located in a first of said elements, the device intended to be controlled by the electric current produced by said chargeable battery being located in a second of said elements, electric means with a switch for feeding said last mentioned device by said current, distinct terminals for feeding said recharging device and electric means, said terminals comprising plug-means and hole means extending from and located in the respective separating surfaces of the respective elements to afford thereby that the recharge of said accumulator and the feeding of the said device shall be effected exclusively by electric connections situated on said surfaces.

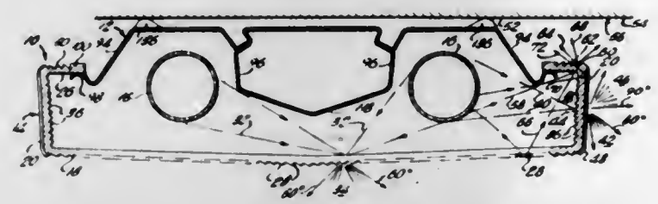


3,275,820
ILLUMINATING SYSTEM
Joseph M. Szarkowski, Box 124, Buchanan, N. Dak.
Filed Dec. 26, 1963, Ser. No. 333,585
4 Claims. (Cl. 240—46.31)

2. In combination, a sealed beam lamp having an outwardly curved circular prismatic lens with aiming pads thereon, a lamp retaining ring adapted to engage the outer edge of said lamp and support said lamp on a vehicle, an annular housing mounted in front of said lamp, a transparent lens closing the front of said housing, a series of parallel downwardly and forwardly inclined translucent louvers in said housing permitting light transmission therebetween, said louvers being oriented generally horizontally and spanning substantially the entire vertical expanse of said housing, a louver retaining ring affixed

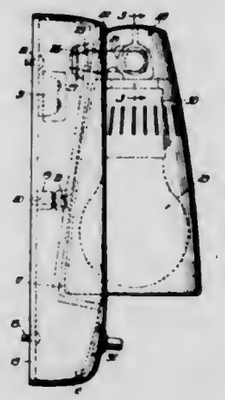
to each of the louvers and maintaining the louvers in said housing in operative position within said housing, said housing having means affixing the rear edges of said housing in secure relation with said lamp retaining ring and maintaining a prefixed relation to the lamp, said housing having indentations formed on the inner surface thereof adjacent the rear edge for receiving and seating said aiming pads whereby to locate the housing and louvers in relation to the lamp.

3,275,821
SHADES
Walter J. Lebb, 521 Maple St., Audubon, N.J.
Filed July 31, 1964, Ser. No. 386,581
1 Claim. (Cl. 240—47)



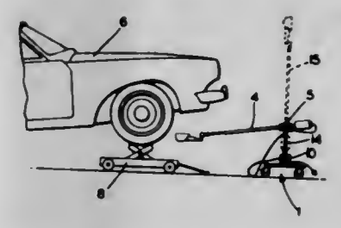
A shade comprising a translucent plastic cup, an insulating member secured to the inside bottom of the cup, said insulating member having a central opening receiving a light bulb, said bottom of the cup having a central opening of greater diameter receiving a lamp socket, said member and bottom having aligned holes for heat ventilation, whereby when the cup is applied to a light socket and a light bulb secured in position, the cup is clamped to the socket and insulated therefrom.

3,275,822
FLUORESCENT LUMINAIRE
Vearl S. Wince, Newark, Ohio, and Carl X. Meyer, St. Louis, Mo., assignors of one-half to Holophane Company, Inc., New York, N.Y., a corporation of Delaware, and one-half to Emerson Electric Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Filed Feb. 19, 1964, Ser. No. 345,894
4 Claims. (Cl. 240—51.11)



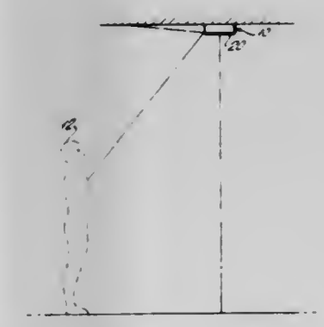
4. A luminaire, comprising a chassis, a refractor connected to said chassis, linear fluorescent lamp means connected to said chassis for providing a source of light, said refractor including a bottom section, two parallel

spaced side sections extending the length of said bottom section and connected thereto, a ledge integrally connected to the top of each side section and extending inwardly, substantially parallel to said bottom section, linear prism means on the outer face of said ledge for directing light transmitted therethrough above the luminaire, said bottom section including a plurality of light cut-off means for screening out light emitted by said lamp means from a predetermined glare zone, said side section including horizontally extending prism means on the inner face of each side section for directing light emitted by said lamp means in direction outside of a



predetermined glare zone and vertically extending prism means on the outer face of said side sections for controlling light transmitted therethrough in longitudinal directions, two parallel spaced end sections extending the width of said bottom sections and connected thereto, said end sections including prism means positioned on the outer face of the end sections for directing a portion of the light emitted by said lamp means in a predetermined downward direction and for directing another portion of light in an upward direction and for laterally diffusing the light transmitted through said prism means.

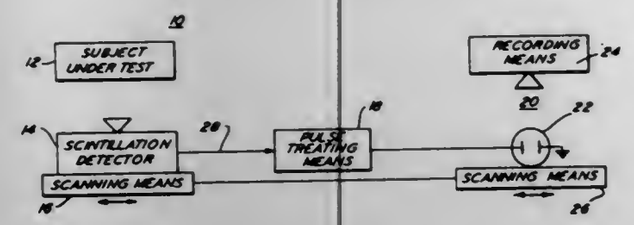
3,275,823
ADJUSTABLE BERTH LIGHT
Edward C. Zimmerman, Evanston, and Peter Aleksa, Chicago, Ill., assignors to Patent License Corporation, Chicago, Ill., a corporation of Illinois
Filed Apr. 13, 1964, Ser. No. 359,077
9 Claims. (Cl. 240—73)



5. An adjustable lamp fixture comprising a base having a shallow recess, a lamp shade adapted to be received in said recess, swivel means adjustably mounting said lamp shade on said base, said swivel means including a mounting axle having a first end portion joined to said base, first and second mounting members held within an upper portion of said lamp shade, an aligned elongated slot in said lamp shade and said mounting members, said mounting axle passing through said elongated slot and terminating in a second end portion within said mounting members, and transversely extending bearing means joining said second end portion of said mounting axle to said mounting members and said lamp shade, said transversely extending bearing means permitting movement of said lamp shade about a first axis in said mounting axle and simultaneous movement about a second axis transversely intersecting said second end portion disposed within said lamp shade whereby swivel movement of said lamp shade relative to said base will occur within said lamp shade.

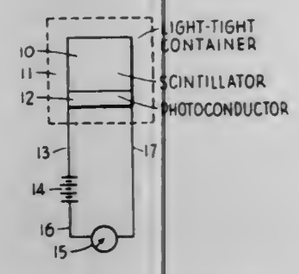
3,275,824
PORTABLE LAMP
William A. Hinds, 126 Cherry St., New Philadelphia, Ohio
Filed Dec. 3, 1963, Ser. No. 327,632
3 Claims. (Cl. 240—81)

3. A portable lamp including a weighted base mounted on castors, an upright standard with one end secured on the base, an arm on the upper arm of the standard, means pivotally mounting the arm on the standard, the arm having portions on opposite sides of said mounting means, a lamp at the end of one arm portion, a counterbalance on the other arm portion, the mounting means including first T means detachably mounted on the upper end of the standard which T means has a horizontal bore and a vertical bore engaged with the standard, said mounting means also including a shaft rotatably mounted in the horizontal bore of the first T means, a second T secured to one end of the shaft and having a bore extending at right angles to the shaft, the arm extending through the bore of the second T and being rotatable therein, and said mounting means also including rings on the arm engaging the second T at the ends of the second T bore for preventing longitudinal movement of the arm in the second T.



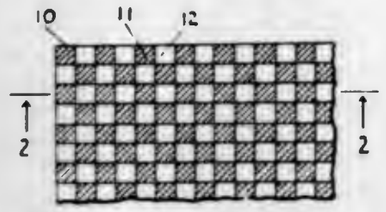
3,275,825
REFRACTOR
Dale E. Welty, Newark, Ohio, assignor to Holophane Company, Inc., New York, N.Y., a corporation of Delaware
Filed Feb. 20, 1964, Ser. No. 346,218
5 Claims. (Cl. 240—106)

1. For use in a luminaire including at least one linear light source, a refractor comprising at least one substantially vertical side panel, said side panel having a series of substantially identical horizontal prisms lying parallel to said light source at the surface of said side panel nearest said light source, said prisms each comprising an upper and a lower light receiving surface asymmetrically disposed on either side of a horizontal plane



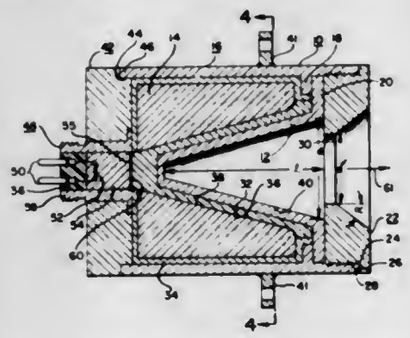
through the apex of said prism, said upper surface constituting means for re-directing incident light thereon at angles lower than a predetermined range of angles from nadir, and said lower surface constituting means for redirecting incident light thereon at angles greater than said range of angles, the area defined within said range of angles defining a glare free zone of light.

3,275,826
SIGNAL PROCESSING MEANS FOR DETECTED PULSE SIGNALS
Harry Leiter, 107 Henley Road, Lower Merion Township, Montgomery County, Pa.
Filed Aug. 23, 1963, Ser. No. 304,050
19 Claims. (Cl. 250—71.5)



7. A signal processing means comprising input means for receiving randomly occurring pulse signals, a signal output line, a first signal gating means for conditionally transmitting signals from said input means, a second signal gating means conditionally transmitting signals transmitted by said first gating means to said signal output line, a first signal generating means having an input lead receiving signals from said input means and being responsive to said signals by delivering signals of predetermined duration for conditioning said first gating means, to transmit signals to said second gating means, and second signal generating means having an input lead receiving signals from said input means and being responsive to said signals by delivering signals of predetermined duration for conditioning said second gating means to inhibit transmission of signals to said output line.

3,275,827
DETECTOR UTILIZING A SCINTILLATOR AND PHOTOCONDUCTIVE MATERIAL
Edward L. Lind, Chagrin Falls, Ohio, assignor to The Harshaw Chemical Company, Cleveland, Ohio, a corporation of Ohio
Filed Dec. 16, 1963, Ser. No. 330,888
5 Claims. (Cl. 250—71.5)



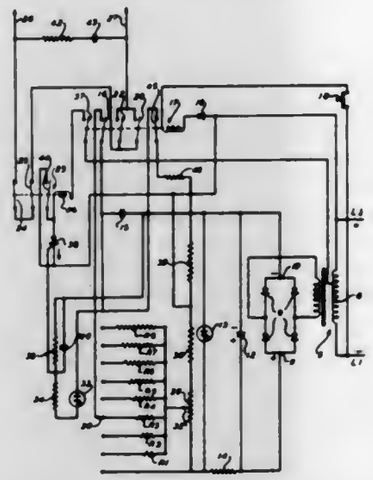
1. A radiation detector comprising in combination a scintillation crystal, a photoconductive body positioned adjacent said crystal and illuminable thereby, and means, including a source of E.M.F. connected in circuit with said photoconductive body for indicating conductance changes therein responsive to changes in illumination thereof, said photoconductive body comprising a plurality of needles of cadmium sulfide connected in parallel with each other and in series with said source of E.M.F. and said body for indicating conductance changes.

3,275,828
RADIOGRAPHIC INTENSIFYING MEANS
Georg S. Mittelstaedt, 274 73rd St., Brooklyn, N.Y.
Filed Apr. 2, 1962, Ser. No. 184,532
3 Claims. (Cl. 250—80)

1. Radiographic intensifying screen comprising a support and a mixture of only red and blue fluorescent dots laid down on said support substantially side by side in single thickness.

3,275,829
CAVITY RADIATOR WITH A PYROTECHNIC CHARGE THAT REMAINS INTACT DURING AND AFTER COMBUSTION
James W. McClune, Torrance, and William F. Green, Van Nuys, Calif., assignors to Special Devices, Inc., San Fernando, Calif., a corporation of California
Filed Aug. 15, 1960, Ser. No. 49,575
42 Claims. (Cl. 250—85)

1. In a cavity radiator the improvement comprising, in combination: a pyrotechnic charge remaining substantially intact during and after combustion, means for igniting said pyrotechnic charge, an opaque cavity electromagnetic radiation emission source surface means in heat transfer relationship to said pyrotechnic charge for emitting electromagnetic radiation, and shielding means having walls defining an aperture oriented with respect to said cavity electromagnetic radiation emission source surface means for transmitting said electromagnetic radiation through said aperture.



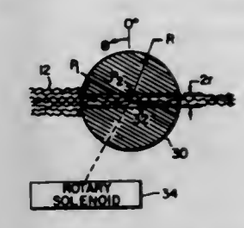
3,275,830
IMPULSE TIMER FOR X-RAY TUBE SYSTEMS OPERABLE FOR A PRESELECTED NUMBER OF HALF-WAVES OF ALTERNATING CURRENT CYCLE
Louis L. Weisglass, New York, N.Y., assignor to X-Ray Mfg. Corporation of America, Great Neck, N.Y., a corporation of New York
Filed Dec. 24, 1963, Ser. No. 333,110
3 Claims. (Cl. 250—95)

1. An impulse timer particularly for the energization of self-rectified X-ray tube systems and operable to cause energization of said X-ray tube for a definite preselected number of full half-waves of the alternating current cycle comprising:

(a) a circuit for producing a constant unidirectional voltage supply comprising a transformer for charging a condenser through a full-wave rectifying arrangement to a definite direct current potential and including a gas stabilizer tube to provide constant voltage and a potential divider to control the supply voltage for a timing circuit;

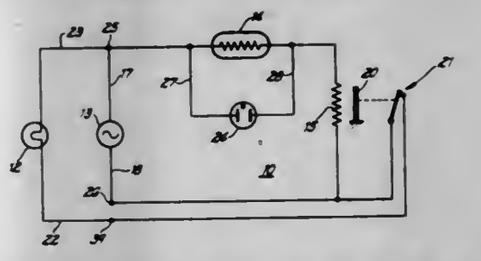
(b) a time measuring circuit including a calibration condenser chargeable by said constant unidirectional voltage supply circuit, an adjustable resistor for selecting the charging voltage of said calibration condenser, and a bank of resistors selectively connectable by an operator to said calibration condenser for selecting the total charging period thereof;

(c) means operable to initiate termination of the timing cycle comprising a discharge circuit for the calibration condenser of said time measuring circuit including a glow lamp having a definite voltage breakdown characteristic and rendered conductive by discharge of said calibration condenser following lapse of its total charging period and a resistor of preselected value to cause the discharge to continue for a period materially in excess of one half-wave of the alternating current cycle, and said discharge circuit being connected to a silicon control rectifier to render the latter conductive by discharge of said caiibration condenser during the period said resistor of preselected value receives current;



(d) a relay actuated by rectified current upon closure of its energizing circuit by an operator to cause closure of the X-ray tube energizing circuit only at the peak of a half-wave of the alternating current cycle when said self-rectifying X-ray tube is nonconducting and regardless of the instant of energization of said relay, and said relay being also operable to render said constant unidirectional voltage supply effective to charge the calibration condenser of said timing circuit;

(e) and X-ray exposure terminating means conditioned for operation by said last mentioned operator-controlled means and including said silicon control rectifier and operable when the latter becomes conductive by discharge of said calibration condenser after the lapse of its preselected charging time to cause deenergization of the X-ray tube following its excitation by a definite preselected number of half-waves of the alternating current cycle.

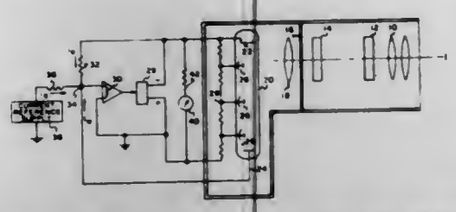


3,275,831
RADIATION BEAM SHUTTER COLLIMATOR
Philip T. Martin, Columbus, Ohio, assignor to Industrial Nucleonics Corporation, a corporation of Ohio
Filed May 16, 1963, Ser. No. 280,975
11 Claims. (Cl. 250—105)

1. A structure for collimating a beam of radiation directed from a source of radiation toward a detector, said structure comprising a cylindrical member mounted for rotation about a longitudinal axis transversely situated with respect to said radiation beam, said member having a reverse-tapered radiation aperture provided therethrough with the axis thereof positioned perpendicular to said axis of rotation, the cross-sectional area of said aperture being smaller at the center of said member at the intersection of said longitudinal axes than at the surface of said member, and means for rotating said

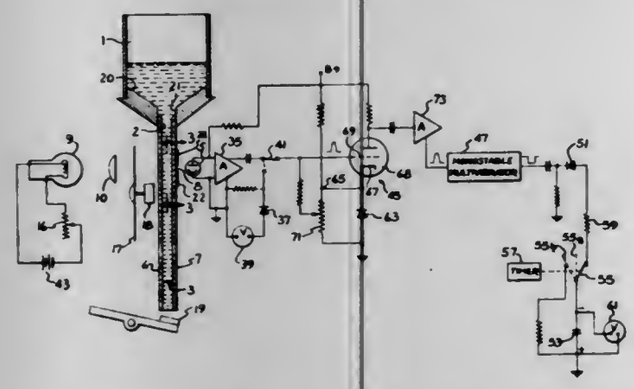
cylindrical member by $\pi/2$ radians from a first position with the axis of said aperture coincident with said radiation beam to a second position wherein said axis of said aperture is perpendicular to said beam.

3,275,832
LIGHT SENSITIVE BIMETALLIC CONTROL SWITCH
Paul J. Curtin, South Milwaukee, Wis., assignor to McGraw-Edison Company, Milwaukee, Wis., a corporation of Delaware
Filed Oct. 7, 1963, Ser. No. 314,269
5 Claims. (Cl. 250—206)



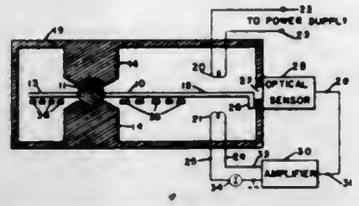
1. In a photo-control device having a pair of input terminals, a photo-sensitive resistor and an elongate heater resistor connected in series, said photo-sensitive resistor being characterized by an impedance that decreases with increasing levels of illumination, an elongate bimetallic element fixed at one end and having a generally U-shaped portion, said bimetallic element also having a bight portion adjacent one end of said U-shaped portion and disposed in close proximity to said heater resistor, a snap acting switch having a fixed contact and a contact arm mounted for movement into and out of engagement with said fixed contact, resilient means coupling the free end of said bimetallic element and said contact arm whereby flexure of said bimetallic element in one direction will cause said resilient means to snap said contact arm away from said fixed contact and return movement of said bimetallic element toward its original position being operative to snap said contact arm into a closed position relative to said fixed contact.

3,275,833
CONSTANT CURRENT SYSTEM FOR PHOTOELECTRIC MULTIPLIER TUBE
Guy R. Moffitt, Jr., Norwalk, and Morris Weiss, Stamford, Conn., assignors to Barnes Engineering Company, Stamford, Conn., a corporation of Delaware
Filed Dec. 6, 1962, Ser. No. 242,720
2 Claims. (Cl. 250—207)



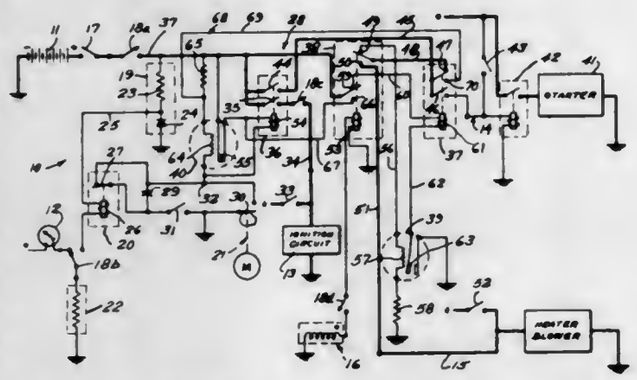
1. A radiometer for measuring high temperatures comprising in combination a photomultiplier tube having a photo-emissive cathode, a plurality of dynodes, and an anode electrode, optical means for collecting and applying radiation from an object whose temperature is to be measured on said photo-emissive cathode, a current summing junction, means for connecting said anode electrode to said current summing junction for applying anode

current thereto, a fixed current reference source substantially equal and opposite in sign with respect to a preselected operating anode current connected to said current summing junction, means for connecting said photoemissive cathode to said current summing junction, magnetic amplifier means connected to said current summing junction for converting current difference signals into a



high voltage supply, means for connecting said high voltage supply to said dynode electrodes whereby said anode current remains substantially constant by automatically varying the dynode voltage in response to radiation changes, and a meter connected across said high voltage supply which is calibrated to indicate temperature in response to changes in said high voltage.

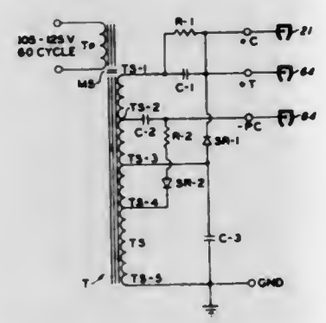
3,275,834
APPARATUS FOR ANALYZING THE SIZE AND NUMBER OF PARTICLES IN SUSPENSION
Daniel S. Stevens, 12099 County Line Road, Chicago, Ill.
Filed Apr. 1, 1963, Ser. No. 269,635
6 Claims. (Cl. 250—218)



1. Apparatus for determining the average size of particles and the number of particles per unit volume in a suspension of such particles, said apparatus comprising means forming a passageway adapted to provide a flow of said suspended particles therethrough, means forming an aperture adjacent to the passageway, means providing a beam of energy directed through said passageway and aperture, the aperture being of such size that the beam of energy passing therethrough and through the passageway traverses a volume of the passageway that is of sufficient size to permit the passage of clusters of particles at random orientations which pulse said beam of energy such that the pulses are proportional to the volume of the particles flowing through the passageway, means converting the pulses into electrical pulses, pulse magnitude selector means receiving said electrical pulses and transmitting only those pulse portions above a preselected magnitude, the pulses above said preselected magnitude resulting from relatively large particles and clusters of particles and with pulses from individual small particles being below said preselected magnitude, means for producing a constant energy output pulse responsive to a pulse portion but irrespective of the magnitude thereof, and means for integrating said constant energy pulses with respect to a selected time period to determine the average rate of arrival of said constant energy pulses over said time period.

3,275,835
PHOTOSENSITIVE ACCELEROMETER UTILIZING RADIATION PRESSURE
Stanley R. Morrison, Hopkins, Minn., assignor to Honeywell Inc., a corporation of Delaware
Filed Jan. 27, 1964, Ser. No. 340,209
11 Claims. (Cl. 250—231)

1. An accelerometer comprising:
a housing;
a support positioned within said housing;
an inertial member mounted on said support for at least one degree of free motion, said member having a preferred normal position relative to said housing;
means for applying a rebalance force on said member to return said member to said preferred normal position when, due to external forces on the housing, said member is displaced away from said preferred position, said means including,
at least one source of radiation adapted to apply pressure on said member along the line of free motion of said member,
a pickoff means mounted on said housing for detecting the motion of said member away from said preferred position, and
energizing means connected to said source of radiation, said energizing means being adapted to receive a signal from said pickoff means and to regulate the amount of radiation from said source in such a way as to maintain said member in said preferred normal position; and
radiation sensing means adapted to measure the amount of radiation originating from said source, said measurement of radiation being indicative of the acceleration of said housing due to external forces.

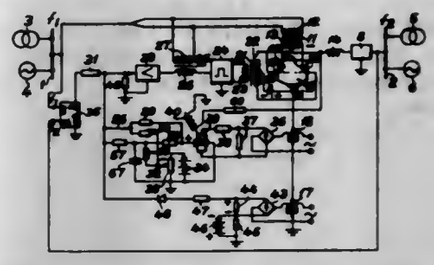


3,275,836
AUTOMATIC ENGINE STARTER
John Vancha, Chicago, Ill., assignor of one-half percent to Frederick A. Michaels, Chicago, Ill.
Filed Mar. 26, 1964, Ser. No. 354,902
6 Claims. (Cl. 290—38)

1. In an automatic starting control system for an internal combustion engine having a battery and a starting circuit powered thereby, the combination comprising:
(a) a thermal sensing element having an electrical resistance responsive to temperature, and adapted to sense engine temperature;
(b) a current-sensitive relay having a coil connected in series with said thermal sensing element, and a set of contacts;

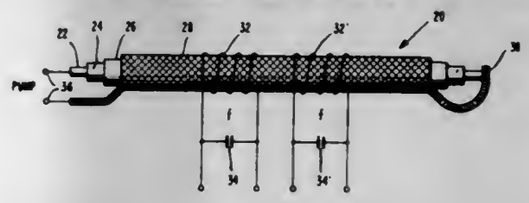
(c) a constant voltage circuit adapted to be powered by the battery, and connected in series with said coil and said thermal sensing element; and
(d) a relay circuit under the control of said contacts and adapted to be connected to the engine starting circuit for controlling application of power thereto.

3,275,837
XEROGRAPHIC CHARGING APPARATUS
Joseph J. Codichini and Rolf W. Eichler, Fairport, and Thomas F. Hayne, Rochester, N.Y., assignors to Xerox Corporation, Rochester, N.Y., a corporation of New York
Filed Jan. 4, 1963, Ser. No. 249,442
3 Claims. (Cl. 307—2)



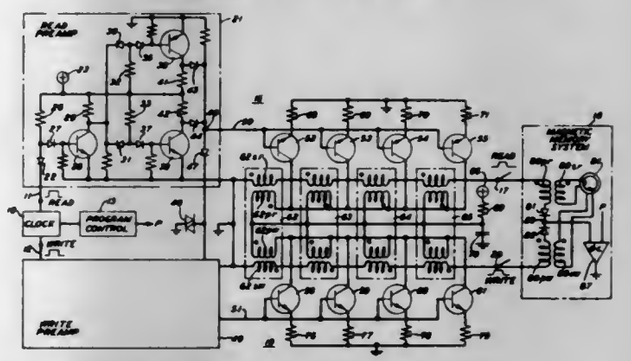
1. A high voltage power supply circuit to provide a positive biased A.C. voltage between a first output terminal and a third output terminal and a negative biased D.C. voltage betwen a second output terminal and said third output terminal, said power supply circuit including
a stabilized transformer having primary input terminals adapted to be connected to a source of A.C. potential, and a secondary having multiple taps;
a first capacitor connected from a first tap of said secondary to said first output terminal,
a first rectifier having its anode connected to a third tap of said secondary and its cathode connected between said first capacitor and said first output terminal,
a second capacitor connected between a second tap of said secondary and said second output terminal,
a second rectifier having its cathode connected to a fourth tap of said secondary and its anode connected between said second capacitor and said second output terminal, and
said third output terminal being connected to a fifth tap of said secodary, whereby the positive peak voltage applied to said first output terminal is greater than the negative peak voltage applied to said first outlet terminal and whereby said negative peak voltage applied to said second output terminal is greater than the positive voltage applied to said second output terminal,

---



3,275,838
EQUIPMENT FOR REGULATING TRANSMITTED POWER BETWEEN TWO ASYNCHRONOUSLY CONNECTED ELECTRIC ALTERNATING CURRENT GRIDS
Knut Almström, Vasteras, Sweden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Swedish corporation
Filed Apr. 2, 1963, Ser. No. 270,075
Claims priority, application Sweden, Apr. 3, 1962, 3,673/62
4 Claims. (Cl. 307—82)

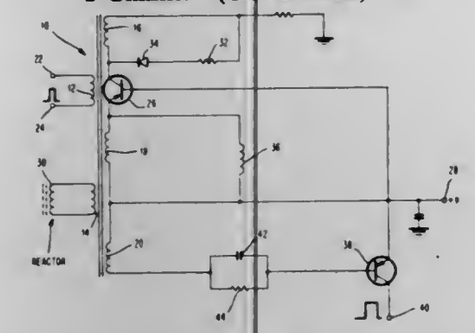
1. Device for regulating the transmitted power between two electric alternating current grids, which grids each contain loading objects and power generators which determine the frequency of the grid, and which grids are connected together via a link which permits the frequencies of the grids to be varied independently of each other which link contains one converter connected to one of the grids and one connected to the other, characterized in that at least one of the converters is equipped with a regulator which influences the transmitting power of the converter



and therewith that of the link, which regulator is under the influence of a signal which is a time operand of the relative difference in frequency between the two grids, the regulator being also under the influence of another signal which is a time operand of the deviation of the transmitted power from certain previously defined power.

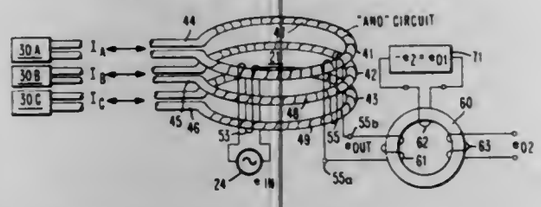
3,275,839
PARAMETRIC DEVICE
William J. Bartik, Jenkintown, Pa., assignor to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed July 17, 1962, Ser. No. 210,360
9 Claims. (Cl. 307—88)

1. A parametric device comprising:
(a) an inner conductor plated with a thin magnetic film in the order of one micron;
(b) an insulator covering said plated inner conductor;
(c) and an external braided conductor co-axially surrounding said insulator.



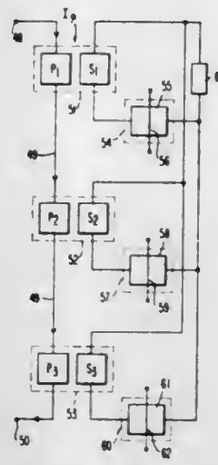
3,275,840
CURRENT DRIVE CIRCUIT
Philip A. Harding, Middletown, and Eugene H. Siegel, Jr., Middletown Township, Monmouth County, N.J., assignors to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Dec. 3, 1962, Ser. No. 241,684
15 Claims. (Cl. 307—88)

15. A current driver circuit comprising
a source of pulses,
a plurality *n* of pulse amplifiers each having an output pulse amplitude probability of variance of *v*,
means connecting the inputs of said amplifiers to said source, and



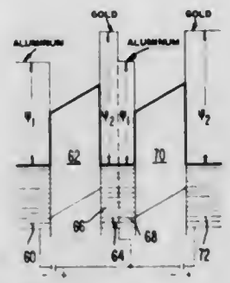
means coupling the outputs of said amplifiers in series to produce an output pulse amplitude probability of variance of v/n.

3,275,841
CONSTANT ENERGY PULSE GENERATOR
Robert A. Pacl, Jr., Willow Grove, Pa., assignor to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed June 8, 1962, Ser. No. 201,095
3 Claims. (Cl. 307—88)



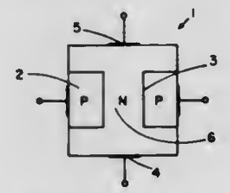
1. A constant energy pulse source comprising a transformer having a plurality of windings, a saturable reactor having a first remanent state and a second saturated state associated with a first of said windings, a source of input pulse signals associated with a second of said windings, said input pulse signals being coupled through said first winding to said saturable reactor and being sufficient in duration and amplitude to drive said saturable reactor into said second saturated state from said first remanent state after a predetermined time period, a switching circuit including a normally non-conducting transistor, a third winding associated with said transistor for receiving a coupled signal from said first winding to switch said transistor to a conducting state when said input signal is applied to said first winding, a utilization circuit, a fourth winding for developing an output signal for said utilization circuit when said transistor is in a conducting state, and said saturable reactor causing said transistor to become non-conducting when it reaches said second saturated state to terminate the output signal applied to said utilization circuit.

3,275,842
MAGNETIC CROSS-FIELD DEVICES AND CIRCUITS
Orestes M. Baycura, Irwin, Pa., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York
Filed Oct. 24, 1962, Ser. No. 232,773
1 Claim. (Cl. 307—88)



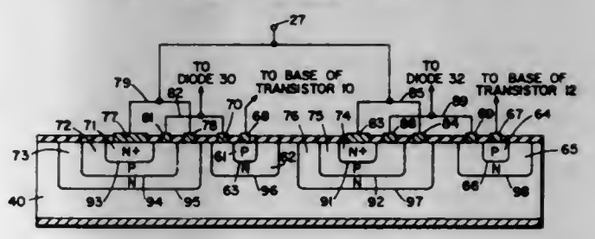
A logic "AND" circuit comprising:
(a) a plurality of conductors;
(b) a magnetic coating formed on each of said conductors;
(c) means for selectively applying a signal current to each of said conductors, each of said signal currents developing a respective first magnetic field in and around the respective conductors;
(d) each said first magnetic field having lines of force which are in a direction transverse to the axis of said conductors;
(e) a first winding wound around said conductors;
(f) means for applying an alternating energizing current to said first winding for developing an alternating second magnetic field having lines of force which extend in a direction along the axes of said conductors;
(g) an output winding wound around said conductors, said output winding having an output voltage developed thereacross which is a function of the interaction of said first and second magnetic fields; whereby
(h) when all of said signal currents are applied to their respective conductors said output voltage is of a first amplitude, and when one or more of said signal currents are not applied to their respective conductors said output voltage is of another amplitude;
(i) a magnetic core having first, second and third windings wound thereon;
(j) said output winding of said "AND" circuit being connected to said first winding of said core;
(k) means for coupling a biasing voltage to said second winding which balances the voltage coupled from said output winding of said "AND" circuit to said first winding of said core when the logic "AND" function is not satisfied to thereby provide a zero voltage output across said third winding when said logic "AND" function is not satisfied; and,
(l) said biasing voltage ceasing to be balanced by the voltage coupled from said output winding of said "AND" circuit to said first winding of said core when said logic "AND" condition is satisfied, whereby said biasing voltage is effective to shift the magnetic state of said core to thereby provide a real output when said logic "AND" condition is satisfied.

3,275,843
THIN FILM SUPERCONDUCTING TRANSFORMERS AND CIRCUITS
Albert J. Meyerhoff, Wynnewood, Pa., assignor to Burroughs Corporation, Detroit, Mich., a corporation of Michigan
Filed Aug. 2, 1962, Ser. No. 214,355
14 Claims. (Cl. 307—88.5)



5. A thin film superconducting circuit comprising: a plurality of superconducting transformers each having means for increasing the inductance of the primary and secondary of said transformer including a shield of superconducting material having at least one opening thereon, each said superconducting transformer having its flux linked primary and secondary windings deposited in an adjacent plane within the projected area of said opening on said shield, said primaries of said plurality of said transformer being connected in series; said secondaries of said plurality of transformers being connected in parallel; a plurality of thin film cryotrons coupled to the secondary of each said superconducting transformer; and each said cryotron adapted to become resistive in response to a current applied thereto.

3,275,844
ACTIVE THIN FILM QUANTUM MECHANICAL TUNNELING APPARATUS
John G. Simmons, Norristown, Pa., assignor to Burroughs Corporation, Detroit, Mich., a corporation of Michigan
Filed Nov. 16, 1962, Ser. No. 238,164
3 Claims. (Cl. 307—88.5)

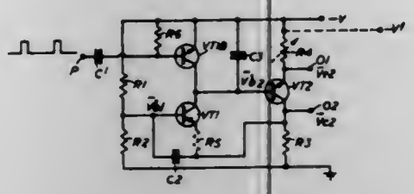


1. Active thin film quantum mechanical tunneling apparatus comprising:
(a) a first and a second pair of conductive material layers, at least one of the conductive layers of each pair being of different relative work function than the other material layer thereof,
(b) each of said pairs of layers of conductive material being separated by an insulating layer whereby a contact potential is developed between said pairs of conductive layers inducing an intrinsic field in the respective insulator permitting electrons to tunnel from the lower work function material to the higher work function material,
(c) the material layer of higher work function of one pair of materials being arranged in contact with the material layer of lower work function of the other pair of materials,
(d) means biasing the lower work function material of one of said pairs of conductive layers negatively while biasing the higher work function material of the other pair of conductive layers positively with respect to the remaining layers effectively increasing the electron injection energy of electrons tunneling from said lower to said higher work function materials producing a gain of better than two-to-one upon energization of said apparatus.

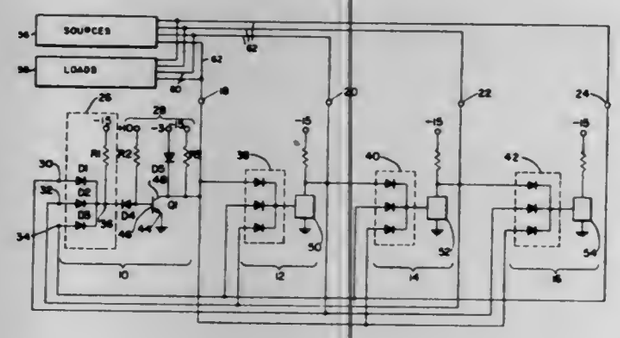
3,275,845
FIELD SWITCHING DEVICE EMPLOYING PUNCHTHROUGH PHENOMENON
Geza Csanky, Mesa, Ariz., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Filed Dec. 27, 1962, Ser. No. 247,697
7 Claims. (Cl. 307—88.5)

1. An isolation device including in combination a semiconductor tetrode comprised of a body of semiconductor material having a constricted region of one conductivity type within said body and two opposed regions of the opposite conductivity type forming junctions on opposite sides of said constricted region, separate gate contacts to said opposed regions, input circuit means connected to said gate contacts and including a signal source for applying input signal voltages between said gate contacts, connections to said constricted region, and output circuit means connected to said connections and including a current source for supplying current through said constricted region which current is a function of the potential difference applied to said contacts as well as the potential applied to said connections, said input circuit means and said output circuit means having no mutual connection and so being isolated from each other.

3,275,846
INTEGRATED CIRCUIT BISTABLE MULTIVIBRATOR
Dean C. Bailey, Scottsdale, Ariz., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Filed Feb. 25, 1963, Ser. No. 260,402
9 Claims. (Cl. 307—88.5)



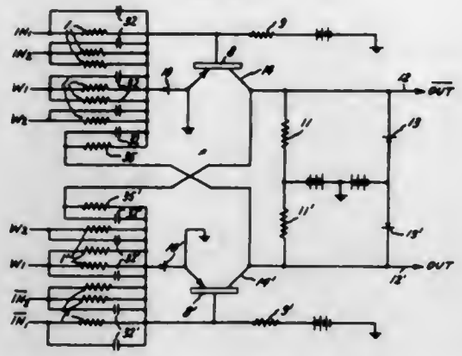
1. A bistable multivibrator circuit including first and second transistors each having collector, emitter and base electrodes, means for connecting the collector electrode of each said transistor to a potential source, means for connecting the emitter electrode of each said transistor to a common reference potential, semiconductor diode means poled for reverse conduction connecting the collector electrode of each said transistor to the base electrode of the other said transistor, said diode means having a reverse breakdown voltage characteristic less than the voltage appearing at the collector electrode of the non-conducting one of said transistors, and with said diode means having a value of reverse junction capacitance to store a charge at least equal to the charge stored by excess minority carriers in the base of the conducting transistor, and circuit means for coupling triggering pulses to the base electrode of said transistors to thereby provide alternate states of conduction and non-conduction, said last named circuit means including first and second pairs of semiconductor diodes series connected between the base electrode of each said transistor and a common trigger input terminal, and a semiconductor diode coupling the junction point of the series diodes in each said pair to the collector electrode of each said transistors whereby when one of the coupling diodes is conducting and the other is reverse biased, the triggering pulse will charge the series diode associated with the conducting diode.



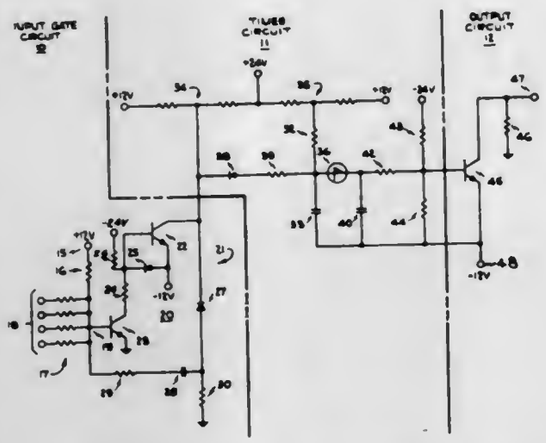
3,275,847
TRANSISTORIZED SAW-TOOTH WAVE GENERATORS UTILIZING DIRECT CURRENT NEGATIVE FEEDBACK
Harry Donald Kitchin, Chalfont St. Peter, Buckinghamshire, England, assignor to The Marconi Company Limited, London, England, a British company
Filed Sept. 12, 1963, Ser. No. 308,468
Claims priority, application Great Britain, Oct. 1, 1962, 37,027/62
9 Claims. (Cl. 307—88.5)

1. A sawtooth generator comprising a first capacitor, first transistor means coupled to said first capacitor to apply a substantially constant charging current thereto

and thus to produce a linearly rising voltage thereacross, means coupled to said first capacitor to periodically discharge said first capacitor and thus to produce a time sequence of linearly rising and falling voltages thereacross, second transistor means coupled to said first capacitor to amplify said rising and falling voltages developed thereacross, and a direct current negative feedback loop connected between the output of said second transistor means and said first transistor means to stabilize the operation of said second transistor means.

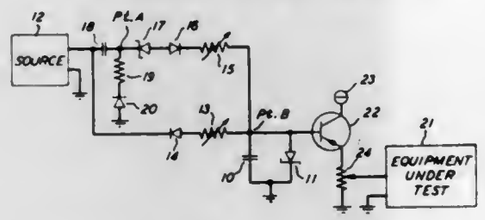


3,275,848
MULTISTABLE CIRCUIT
Chester Gordon Bell, Concord, Mass., assignor to Digital Equipment Corporation, Maynard, Mass.
Filed Sept. 19, 1963, Ser. No. 310,044
8 Claims. (Cl. 307—88.5)



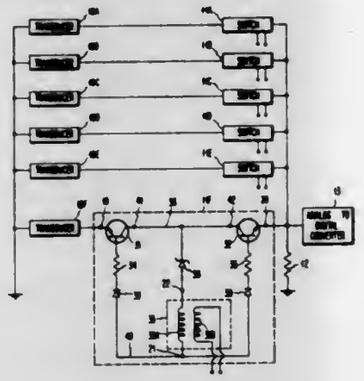
1. An electronic circuit comprising
(A) at least three logic circuits, each of which
(1) has a plurality of input terminals not exceeding the number of logic circuits and an output terminal,
(2) develops a second-level output signal only when all said input terminals receive first-level signals,
(3) develops said first-level signal at its output terminal when any one or more of said input terminals receives a second-level signal,
(4) has its output terminal connected to an input terminal of each of the other logic circuits so that each input terminal of each logic circuit is connected to an output terminal of another different logic circuit, and
(5) is arranged to develop a higher output impedance at its output terminal when it develops said first-level signal than when it develops said second-level signal,
(B) whereby in response to application of an input signal of said second level to a first output terminal and, alternatively, application of an input signal of said first level to all output terminals except said first one, said circuit develops at said first output terminal a persisting second-level signal and constrains the signals at the other output terminals to said first level.

3,275,849
BISTABLE DEVICE EMPLOYING THRESHOLD GATE CIRCUITS
Clarence L. Coates, Jr., Austin, Tex., and Philip M. Lewis II, Schenectady, N.Y., assignors to General Electric Company, a corporation of New York
Filed Nov. 8, 1963, Ser. No. 322,349
5 Claims. (Cl. 307—88.5)



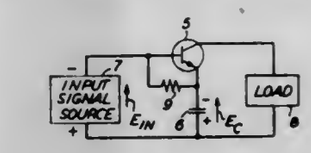
1. A bistable device comprising a pair of complementary threshold gates, each said gate having a plurality of inputs and generating an inverted output signal when the summation of input signals applied thereto exceeds a predetermined threshold value, cross-connections coupling the output of a first said threshold gate as an input to a second gate as well as coupling the output of said second gate as an input to said first gate, and means to provide the cross-connected inputs with weights respectively sufficient by themselves to supply signals which exceed the threshold value of said gates, and means coupling a single input to each of said gates in parallel so that energization of said single input concurrently with another input to said first gate results in producing a binary zero output signal from said first gate and a binary one output signal from said second gate.

3,275,850
TIMER
Roger Edward Arseneau, Elkgrove Village, Ill., assignor to International Telephone and Telegraph Corporation, New York, N.Y., a corporation of Maryland
Filed Feb. 11, 1964, Ser. No. 344,113
8 Claims. (Cl. 307—88.5)



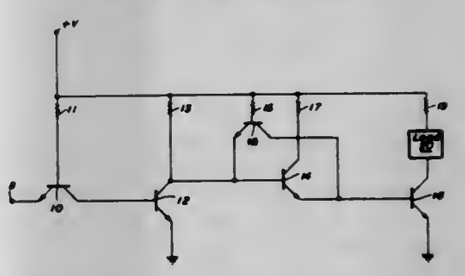
1. A timer comprising an input circuit and an output circuit having an RC network therebetween, means comprising a first diode for isolating a charge built upon the capacitor of said RC network to prevent leakage into said input circuit, means comprising an electronic switching diode for preventing a discharge of said capacitor into said output circuit when said switching diode is "off," means in said input circuit responsive to either of two input signal conditions for either discharging said capacitor via said first diode or causing said capacitor to charge, and means responsive to an accumulation of a predetermined charge upon said capacitor for turning "on" said electronic switching diode and discharging said capacitor into said output circuit.

3,275,851
TRAPEZOIDAL TEST SIGNAL GENERATOR WITH LEADING AND TRAILING EDGE CONTROL
Robert C. Bedingfield, Greensboro, N.C., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Feb. 18, 1964, Ser. No. 345,795
5 Claims. (Cl. 307—88.5)



1. In combination
a source for producing a voltage having a rectangular waveform with leading and trailing edges,
first energy storage means responsive to said trailing edge of said rectangular voltage to produce a voltage having a polarity opposite to that of said source voltage,
second energy storage means for storing energy between two predetermined levels,
a first path including a serially connected resistor and diode connected between said source and said second energy storage means to pass current only in response to said voltage having a rectangular waveform,
a second path including a serially connected resistor and diode connected between said first energy storage means and said second energy storage means to pass current only in response to said first energy storage means voltage having a polarity opposite to said source voltage, and
means making available the potential appearing across said second energy storage means as a result of the energy stored therein.

3,275,852
TRANSISTOR SWITCH
James Jursik, Rochester, Minn., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York
Filed Mar. 18, 1964, Ser. No. 352,837
9 Claims. (Cl. 307—88.5)

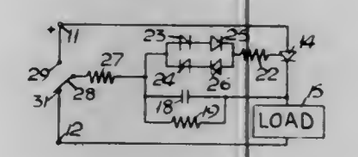


1. A transistor switch comprising:
first and second transistors each having an emitter electrode, a base electrode and a collector electrode;
a common collector connection conecting the collector electrode of said transistors in common;
a common base connection connecting the base electrodes of said transistors in common;
the emitter electrode of said transistors forming a pair of switch terminals; and
a control circuit connected between said common base connection and said common collector connection for opening and closing the path between said switch terminals;
the improvement comprising at least one unidirectional device in said common base connection and means for open-circuiting said control circuit when said switch is in the OFF condition;
whereby said switch can sustain between said switch terminals when said switch is in the open condition a voltage greater than the base emitter breakdown voltage of said transistors.

3,275,853
WAVE TRANSLATING DEVICE FOR PRODUCING SHORT DURATION PULSES
Stanley H. Rothrock, Gillette, N.J., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Nov. 6, 1964, Ser. No. 409,414
5 Claims. (Cl. 307—88.5)

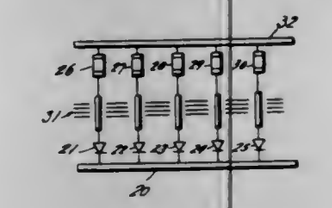
1. A pulse generator comprising a two terminal source of an electrical waveform which manifests a shift from a first voltage level to a second voltage level, a transistor having base, collector, and emitter electrodes, circuit means connecting said base electrode to a first terminal of said source, a capacitive storage network connected between said emitter electrode and the second terminal of said source, a load circuit connected between said collector electrode and said second source terminal, and a bypass circuit connected between said base and emitter electrodes so that said capacitive network is charged through said bypass circuit when said waveform is at said first voltage level and is discharged through said load circuit when said waveform shifts to said second voltage level.

3,275,854
CURRENT DRIVER
Michael Cianciola, Vista, Calif., assignor to General Precision, Inc., a corporation of Delaware
Filed Nov. 23, 1964, Ser. No. 413,065
5 Claims. (Cl. 307—88.5)



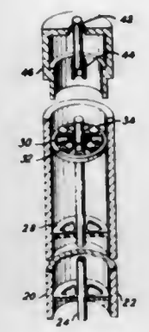
1. A switching circuit for rapidly supplying an electrical charge of a specific polarity to the base electrode of a switching means comprising:
a first electronic switching means including an input means and an output means;

a second switching menas including an input means and an output means, said first electronic switching means and said second electronic switching means coupled in cascade with the input of said second electronic switching means coupled to the input of said first electronic switching means; and



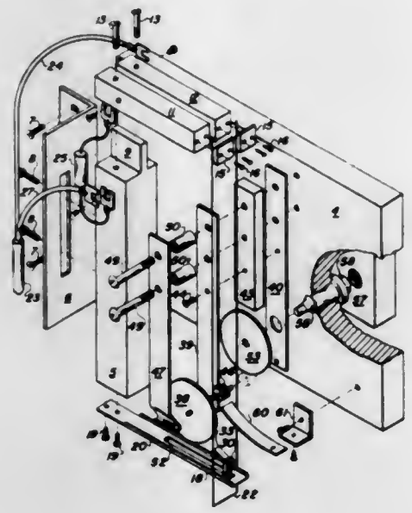
a second switching means including an input means and with said first electronic switching means, said third electronic switching means being inversely conducting with said first electronic switching means when a signal is presented to the input of said first electronic switching means.

3,275,855
POWER CONTROL CIRCUITS
Maurice James Wright, Harborne, Birmingham, England, assignor to Joseph Lucas (Industries) Limited, Birmingham, England
Filed Sept. 9, 1963, Ser. No. 307,649
Claims priority, application Great Britain, Oct. 10, 1962, 38,319/62
7 Claims. (Cl. 307—139)



1. A power control circuit comprising in combination a pair of terminals for connection to a D.C. source, a switchable rectifier having its anode and cathode connected to the pair of terminals respectively, a load in the cathode circuit of the switchable rectifier, a capacitor discharging of which effects switching on and off of the switchable rectifier, switch means for controlling charging of said capacitor, said switch means being connectible alternatively to said pair of terminals and being connected to the cathode of said switchable rectifier through said capacitor, and a trigger device through which said switch means is connected to the gate of said switchable rectifier.

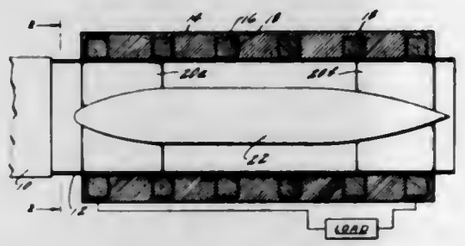
3,275,856
SEMICONDUCTOR BANK ASSEMBLY
Walter V. Chumakov, Philadelphia, Pa., assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Filed July 31, 1963, Ser. No. 298,820
6 Claims. (Cl. 307—146)



5. A semiconductor bank assembly comprising a plurality of diodes, a plurality of fuses, a current balancing reactor means having a plurality of reactor windings, an anode bus and a cathode bus; each of said plurality of diodes being connected in series with a respective fuse of said plurality of fuses and a respective reactor winding of said plurality of windings; each of said series connected connections of said fuses, diodes and reactor windings terminating on said anode but at one end and said cathode bus at their other end; said reactor windings of each of said series connected fuses, diodes and reactor windings being interposed between their respective fuses and diodes.

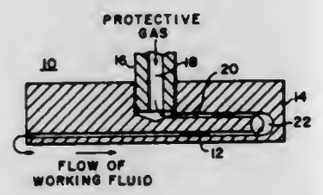
3,275,857
SUPERCONDUCTIVE SYSTEMS
Donald C. Freeman, Jr., and Eugene J. M. Lynch, Tonawanda, N.Y., assignors to Union Carbide Corporation, a corporation of New York
Filed Aug. 7, 1963, Ser. No. 300,539
6 Claims. (Cl. 307—149)

2. A superconductive system comprising, in combination, a thermally insulated container, a plurality of superconductive circuits in said container, each consisting of a tube and a core of superconductive material in coaxial relationship together with radial connectors at least one of which includes means for controlling the flow of current in such circuits, and means for maintaining said circuits in a superconductive state.



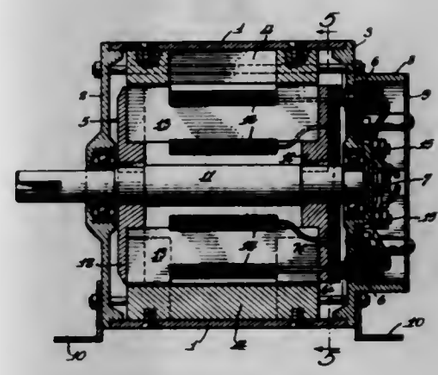
3,275,858
HOT WIRE MOTOR WHICH OSCILLATES AT THE SAME FREQUENCY AS THE INPUT
Christian D. Berger, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Filed July 16, 1963, Ser. No. 295,464
10 Claims. (Cl. 310—4)

1. An electric motor comprising:
(a) support means,
(b) a drive system including:
(aa) a ratchet wheel rotatably mounted on said support means,
(bb) an electrically conductive wire supported by said support means,
(cc) a pawl drivingly connected to said wire and positioned for driving engagement with said ratchet wheel when oscillated by movement of said wire,



(c) a source of high frequency alternating current having a frequency of 50 to 60 cycles per second connected to said wire,
(d) said wire being constructed and dimensioned so that it heats and expands with rising current flow from said current source and cools and contracts with falling current flow from said current source without breaking the circuit between said wire and said current source.
(e) said wire being constructed and dimensioned so that it expands and contracts synchronously with the frequency of the current applied thereto from said current source,
(f) whereby said pawl is oscillated by said wire in synchronism with the frequency of the current applied to said wire.

3,275,859
INSULATING VANES FOR LINEAR MHD DEVICES
Russell G. Meyerand, Jr., Glastonbury, and Edmund C. Lary, Vernon, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Filed Oct. 2, 1961, Ser. No. 142,263
7 Claims. (Cl. 310—11)

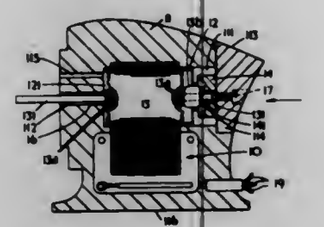


6. In an alternating current magnetohydrodynamic device having a conduit for the passage of a conducting fluid,
means for generating a magnetic field along the length of said conduit, said magnetic field interacting with said conducting fluid to generate azimuthal currents in said conducting fluid,
and vane means extending from the wall of said conduit into said conduit and extending longitudinally along said conduit for interrupting part of said azimuthal currents to facilitate penetration of said magnetic field into said conducting fluid.

3,275,860
ELECTRODE STRUCTURES FOR AN MHD GENERATOR
Stewart Way, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Filed July 13, 1962, Ser. No. 209,575
7 Claims. (Cl. 310—11)

1. In energy conversion apparatus operative with a flow of thermally ionized working fluid, an electrode structure operative with an electrically conductive protective gas, said electrode structure comprising: a base member having a surface disposed adjacent said flow of ionized working fluid, and protective gas inlet means operative to supply said protective gas to said base member, and means forming a part of said base member through which said protective gas flows to provide an electrically conductive layer of protective gas between said surface and said flow of working fluid.

3,275,861
ELECTRIC MOTOR WITH ARCUATE POLE PIECES
Max Goroszko, 2443 W. Armitage Ave., Chicago 47, Ill.
Filed Feb. 5, 1965, Ser. No. 432,075
4 Claims. (Cl. 310—46)



1. An electric motor rotatable about an axis of rotation and operating on the principle of magnetic attraction only, comprising in combination:
(a) a plurality of energizable stator means each comprising a pair of magnetic units, each unit having a core and an energizing winding for said core, means connecting the cores of each of said pairs with each other to form a flux path between said cores, the units of a pair being mounted in said motor in spaced relation in an axial direction, each unit of a pair providing a same given polarity each time it is energized and the units of a pair providing poles of complementary polarities when energized;
(b) a plurality of said stator means mounted in spaced circumferential relation, said stator means being uneven in number;
(c) a rotor comprising a pair of members arranged in spaced radial relation, said members being arcuate such that the reluctance thereof decreases in the direction of rotation, said rotor members being positioned and dimensioned to have a path of rotation adjacent to said stators;
(d) means mounting said rotor members for movement in a given direction relative to said stator means, and said rotor members being mounted closer to said axis than said stator;
(e) said rotor members being dimensioned and positioned in said motor to have one side thereof attracted by one of the magnetic units of a pair and the other side thereof concurrently attracted by the other one of the magnetic units of a pair; and
(f) commutator means electrically connected to said magnetic units for selectively energizing and deenergizing said stator means in response to the relative position of said rotor members to said stator means to cause said stator means to magnetically attract said rotor members as said members move in a direction toward and adjacent said stator means and to terminate or cut-off said attraction when said rotor members move in a direction away from said stator means.

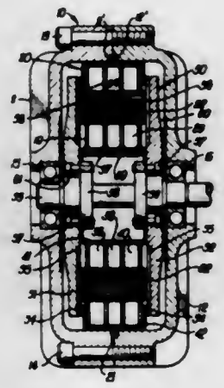
3,275,862
SUBMERSIBLE ELECTRIC MOTOR FOR APPLIANCES

Robert Kren, Sutton Coldfield, England, assignor to James Beresford & Son Limited, Ace Works, Kitts Green, Birmingham, England, a corporation of the United Kingdom of Great Britain and Northern Ireland

Filed Apr. 24, 1963, Ser. No. 275,257
Claims priority, application Great Britain, Nov. 13, 1962, 42,782/62
3 Claims. (Cl. 310—87)

1. A submersible electric motor incorporating a stator section, an encasement for the stator section of a waterproof synthetic plastics material having good electrical insulating properties, good heat conductivity and strength, and which is molded around the stator section so as to embed the stator section in the encasement completely in a waterproof manner, a rotor, a metal liner which is bonded to the stator section in waterproof association therewith during the process of molding the encasement around the stator section and which liner serves to bound the chamber within which the rotor is required to work, bearings for the spindle of the rotor which are enclosed within the encasement, said encasement having a flat under surface providing a base for supporting the electric motor as a whole, a passage in one end portion of the encasement which is open at its outer end to the exterior of the encasement and which at its inner end opens into the hottest zone of the rotor chamber, a detachable section of the encasement which is located at the opposite end portion of the encasement to the end portion first mentioned which is made of the same material, means for securing the detachable section to the main body of the encasement to complete the encasement, the permissible separation of the detachable section from the main body of the encasement facilitating positioning of the rotor within the rotor chamber and permitting of the removal of and the replacement of the rotor as required, a passage in the said detachable section the inner end of which is open to the rotor chamber at the opposite end of the rotor chamber to that first mentioned, and the outer end of which second mentioned passage opens to the exterior of the encasement whereby the liquid within which the electric motor may be immersed may flow through the said second mentioned passage into the rotor chamber and around the rotor as a coolant and subsequently pass out of the rotor chamber by way of the passage first mentioned which leads from the hottest zone of the rotor chamber and leads for conducting electric current to the windings of the stator section which are embedded in and bonded in the encasement during the molding process and which after embedment are permanently retained within the encasement.

3,275,863
ELECTRIC MACHINE CONSTRUCTION



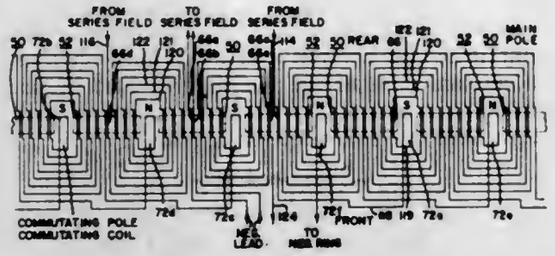
Ferenz H. Fodor, Los Angeles, Calif., assignor, by mesne assignments, of fifty-five percent to Elliott M. Norton and forty-five percent to Ferenz H. Fodor and Leslie G. Turner

Filed Feb. 1, 1965, Ser. No. 431,763
12 Claims. (Cl. 310—166)

1. In an electric machine of the type having a central stator assembly and a pair of axially spaced rotors, one mounted at each side of the stator assembly in close rotatable relation, the provision of a stator assembly comprising:

a plurality of magnetic segments disposed in a generally circular array with axes thereof parallel and lying transversely of the array and including axially spaced opposite end faces; and

means for inducing magnetic flux in said segment including a plurality of windings of non-magnetic material wound about said segments in directions

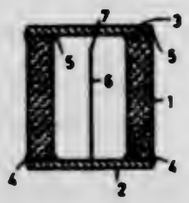


perpendicular to said axes to provide opposite end faces of each segment with opposite polarities, said windings being wound about groups of segments of one or more to provide selectable numbers of stator poles wherein the windings of adjacent groups are wound in opposite directions to provide opposite polarities to adjacent poles.

3,275,864
D.C. MACHINE AND INTERNAL CONNECTIONS THEREFOR

Arthur W. Fennell, Jr., Monroeville, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Filed Dec. 31, 1963, Ser. No. 334,706
7 Claims. (Cl. 310—180)

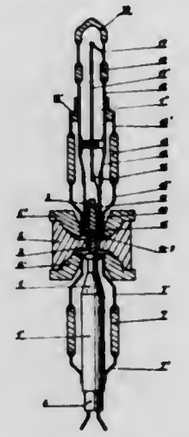


1. In a compensated D.C. dynamoelectric machine, a frame having a plurality of magnetic field pole pieces disposed about its inner periphery, a plurality of compensating conductors extending axially along an inner face of each of said pole pieces, series field strap means disposed on each of said pole pieces and having end connecting portions thereof located on one side of said machine, and means within said machine frame for serially interconnecting said series field strap means between an armature power terminal and an armature circuit ring terminal both of which are located on the side of said machine opposite said one side, said interconnecting means including at least one of said compensating conductors connected between said series field strap means and one of said terminals, the balance of said compensating conductors interconnected to form at least one compensating winding means physically distributed over said pole pieces in series circuit relation between said series field strap means and the other of said terminals.

3,275,865
FIELD EMISSION TUBE WITH LOW TEMPERATURE GAS ADSORPTION

Antonius Gerardus Johannes van Oostrom and Albertus Venema, Emmasingel, Eindhoven, Netherlands, assignors to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Filed Sept. 11, 1963, Ser. No. 308,131
Claims priority, application Netherlands, Sept. 11, 1962, 283,116/62
2 Claims. (Cl. 313—11)

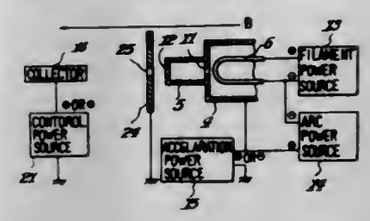


1. An electric discharge device comprising an envelope containing an anode and a cathode, said cathode comprising a wire-like element having one end spaced from the anode with a relatively small radius of curvature whereby electrons are emitted from said cathode by the action of an electric field produced by the anode, said envelope comprising metal portions separated by and joined to ceramic portions by a solder material, an argon atmosphere in said envelope at a pressure of the order of ten torr at room temperature, and means to cool said envelope to a temperature substantially below room temperature and at which the argon gas is substantially adsorbed by said envelope.

3,275,866
MAGNETRON CATHODE STRUCTURES

René Zwobada, Enrico Piatti, Jacques Beal, and Remi Juillerat, all of Paris, France, assignors to Societe Lignes Telegraphiques et Telephoniques, Paris, France, a joint-stock company of France

Filed May 25, 1961, Ser. No. 126,370
Claims priority, application France, June 14, 1960, 829,880; Oct. 31, 1960, 842,663; Apr. 27, 1961, 860,263
6 Claims. (Cl. 313—37)

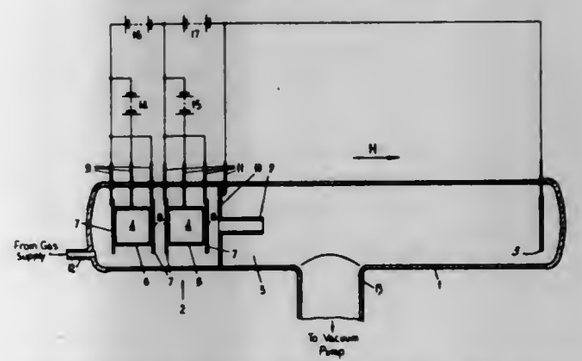


1. A magnetron comprising in combination: an elongated cathode structure including first and second parts; a filamentary heater housed within said first part; means connected to said second part affording connection of a cooling means thereto; an emissive coating on said structure adjacent said first part; at least one cathode hat integral with said second part; an apertured anode surrounding at least the emissive portion of said structure, the aperture being of less diameter than the diameter of said hat; pole pieces connected to said anode; and envelope means connected between said cathode structure and said pole pieces.

3,275,867
CHARGED PARTICLE GENERATOR

Takashi Tsuchimoto, Kodaira-shi, Japan, assignor to Kabushiki Kaisha Hitachi Seisakusho, Chiyoda-ku, Tokyo-to, Japan, a joint-stock company of Japan

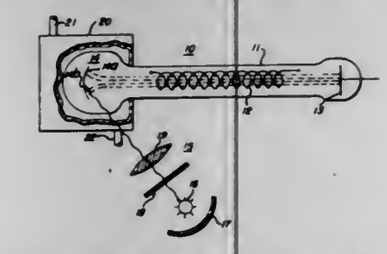
Filed Feb. 13, 1963, Ser. No. 258,249
Claims priority, application Japan, Feb. 15, 1962, 37/5,207
3 Claims. (Cl. 313—63)



1. A charged particle generator comprising means defining a vacuum chamber, means for creating an axial magnetic field within said vacuum chamber, means defining an arc discharge box, means for supplying gas into said arc discharge box, a plasma chamber contiguous to said arc discharge box, said plasma chamber having a small opening therein adjacent said arc discharge box to provide communication between the arc discharge box and chamber respectively, said plasma chamber having an outlet opening to provide communication between the interior of the plasma chamber and said vacuum chamber, said arc discharge box and said plasma chamber being located within said vacuum chamber so as to create therethroughout from within the interior of said arc discharge box and within said axial magnetic field a low voltage arc discharge plasma and means for impressing an accelerating voltage relative to ground on said arc discharge box to release charged particles within said plasma from said plasma box through the said outlet opening.

3,275,868
APPARATUS FOR GENERATING MASSES OF HOT IONISED GAS AND AMPLIFYING RANDOM FLUCTUATIONS

Ronald Leslie Ferrari, Stanmore, and Alan Reddish, Pinner, England, assignors to The M-O Valve Company Limited, London, England

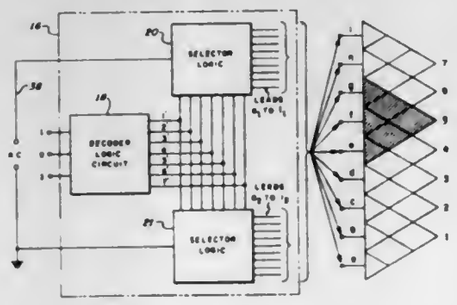


Filed Nov. 13, 1963, Ser. No. 323,382
Claims priority, application Great Britain, Nov. 14, 1962, 43,087/62
1 Claim. (Cl. 313—63)

An apparatus for generating a mass of hot ionised gas comprising: an enclosure containing a gas at a low pressure; a collector electrode and an ion gun housed in said enclosure, the ion gun including two ion sources each consisting of an electrode system generating a gas discharge, and at least one accelerator electrode, in the enclosure, disposed between the collector electrode and the ion sources; and means for applying biasing potentials to the electrodes so as to cause ions to be drawn from the ion sources to form a beam comprising two streams

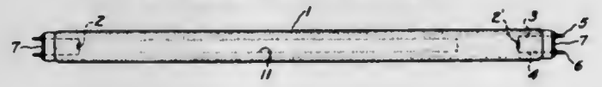
of gas ions directed onto the collector electrode, said streams travelling in close proximity over a considerable distance, the motions of the ions in each stream being subject to random thermal fluctuations which constitute waves having phase velocities greater and smaller than the mean velocity of that stream, and the magnitudes of the biasing potentials being such that the streams travel at mean velocities differing by an amount such that said waves of smaller phase velocity set up in the faster stream due to said thermal fluctuations interact with said waves of greater phase velocity set up in the slower stream due to said thermal fluctuations, whereby, due to such interaction, there occurs travelling wave tube type amplification of the waves set up in the system due to said thermal fluctuations, thereby increasing the thermal energy of the ions at the expense of the energy of directed motion of the ions.

3,275,869
LOW NOISE ELECTRON EMITTERS
Wolfgang M. Feist, Burlington, Mass., assignor to Raytheon Company, Lexington, Mass., a corporation of Delaware
Filed July 12, 1963, Ser. No. 294,555
8 Claims. (Cl. 313—65)



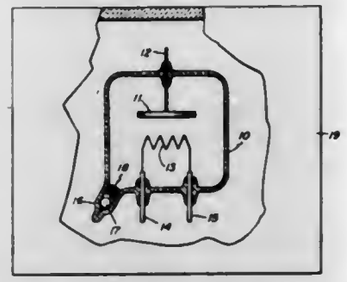
1. A low noise electron emitter comprising a cathode having a layer of material responsive to electromagnetic radiation for emitting electrons, said material being substantially non-responsive to radiation at wavelengths above a threshold wavelength, said electron emitter further comprising means for producing electromagnetic radiation over a range of wavelengths, said means being aligned with said cathode, the shortest wavelength produced by said means being less than said threshold wavelength of said layer of electron emitting material and said shortest wavelength being limited with respect to said threshold wavelength to limit the maximum energy difference between electrons emitted from said layer of electron emitting material.

3,275,870
CERAMIC TYPE ELECTROLUMINESCENT DEVICE WITH MOISTURE PENETRATION PREVENTION SEAL
Ivan E. Buck, Jr., East Orange, and Hans Bullinger, Bloomfield, N.J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Filed Jan. 9, 1962, Ser. No. 165,075
5 Claims. (Cl. 313—108)



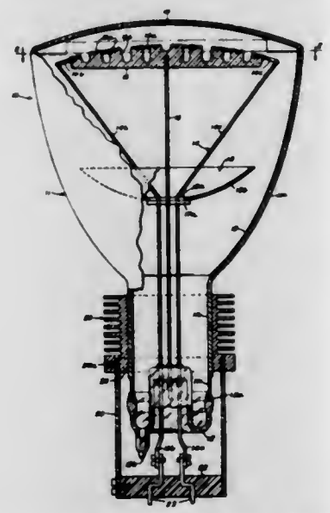
1. A ceramic-type electroluminescent device which is effectively sealed against ingress of moisture: the operative portion of said device comprising, a first electrode layer which is impervious to penetration by moisture, a light-transmitting second electrode layer substantially parallel to and spaced from said first electrode layer and which is pervious to penetration by moisture, and a layer comprising finely divided electroluminescent phosphor embedded in light-transmitting ceramic dielectric material included between said spaced electrode layers; a preformed light-transmitting vitreous layer which is impervious to penetration by moisture overlaying substantially all portions of said second electrode layer and exterior to the operative portion of said device; a thin, continuous, resilient, cured, light-transmitting thermoset adhesive formed as a layer which is resistant to penetration by moisture between and adhering together said light-transmitting second electrode layer and said overlaying vitreous layer; and means for connecting said electrode layers across a source of alternating electric potential.

3,275,871
DISPLAY APPARATUS
Peter G. Ylotis, Astoria, N.Y., assignor to Sperry Rand Corporation, Great Neck, N.Y., a corporation of Delaware
Filed Feb. 17, 1964, Ser. No. 345,327
8 Claims. (Cl. 313—108)



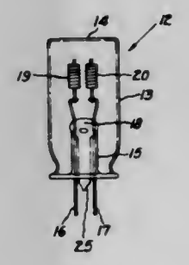
6. Display apparatus comprising a first plurality of substantially parallel transparent conductive strips in a first plane, said strips being skewed with respect to a reference plane, the side of each strip farthest from the reference plane forming an angle with respect to the reference plane, a second plurality of substantially parallel conductive strips in a second plane parallel to said first plane, said second plurality of strips being of such lengths and so skewed with respect to the reference plane that sides of these strips lie in planes with respective sides of the strips of said first plurality of strips, the farthest sides of the strips of said second plurality of strips forming different angles with respect to the reference plane than the aforesaid angles formed by said first plurality of strips, and planar means situated between said first and second planes responsive to voltage differentials applied between opposing strips of said first and second pluralities to illuminate said planar means in the regions where respective electrically excitable strips of said first and second pluralities overlap.

3,275,872
REFLECTOR FLUORESCENT LAMP
Myron A. Chernin, Shaker Heights, and Elton T. Leppelmeier, Highland Heights, Ohio, assignors to General Electric Company, a corporation of New York
Filed July 12, 1963, Ser. No. 294,536
6 Claims. (Cl. 313—109)



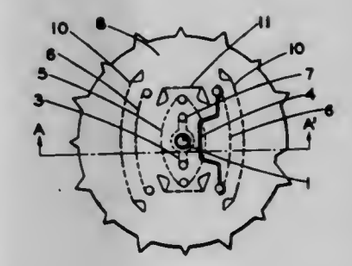
1. A fluorescent reflector lamp comprising a tubular elongated glass envelope having electrodes sealed into opposite ends and containing an ionizable medium including mercury vapor and an inert gas at a low pressure, a reflective coating and a phosphor coating thereover responsive to the ultraviolet radiation produced by an electric discharge through said medium, said reflective coating extending over the entire interior of said envelope except for a window extending in width over a minor portion of the periphery and in length less than the full length of the lamp.

3,275,873
ELECTRIC DISCHARGE DEVICE HAVING IMPROVED DISPENSER CATHODE
John M. Houston, Schenectady, N.Y., assignor to General Electric Company, a corporation of New York
Filed July 1, 1964, Ser. No. 379,659
2 Claims. (Cl. 313—182)



1. An electric discharge device of the high vacuum type comprising an evacuated envelope, a plurality of electrodes exposed to the interior of said envelope including a cathode of refractory metal, a quantity of solid thorium iodide exposed to the interior of said envelope, means for maintaining said iodide at a temperature less than the parts of said device within said envelope and below 350° C., and means maintaining said cathode at a higher temperature than the other parts of said device within said envelope so that said iodide is dissociated at said cathode to dispense thorium to said cathode during operation of the device.

3,275,874
ELECTRICALLY ENERGIZED HEAT RADIATOR
Jo Emmett Jennings, San Jose, Calif., assignor to Jennings Radio Manufacturing Corporation, San Jose, Calif., a corporation of Delaware
Filed May 11, 1962, Ser. No. 193,940
7 Claims. (Cl. 313—183)

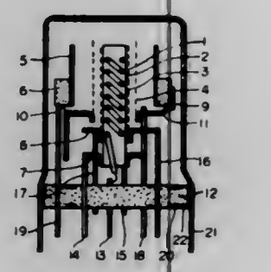


1. An electrically energized heat radiator comprising in combination, an enclosed hermetically sealed housing of nonoxidizing relatively thin metallic material including a radiating end portion forming part of the hermetically sealed housing, a filament spaced within the housing in substantial parallelism with said radiating end portion, dielectric means connected with the wall of the housing on the end thereof opposite said radiating end portion to support said filament and lead-in connections to the filament from outside to within the housing, and a heat reflector apart from the interior surface of said housing and disposed within said housing on the side of said maximum heat radiating portion of the filament opposite said heat concentrating end wall portion of the housing to focus the heat on said maximum heat radiating wall portion.

3,275,875
SPARK TUBE HAVING ACTIVATED THERMIONIC ELECTRODES
Hans L. Wattenbach, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Filed Dec. 27, 1962, Ser. No. 247,633
5 Claims. (Cl. 313—185)

1. A spark tube comprising a vitreous envelope having a pair of lead-in wires sealed thereinto through a re-entrant stem and containing a filling of an inert gas at a pressure in the range of 25 to 500 millimeters of mercury, a pair of electrode assemblies attached to said lead-ins and extending side by side within said envelope at an interelectrode distance apart not exceeding 5 millimeters, each electrode assembly comprising a refractory metal shank with refractory metal wire coiled thereover and being activated with electron-emitting material comprising alkaline earth oxide and metal, said material coating the electrode assembly and filling the interstices in the coiling.

3,275,876
ELECTRON DISCHARGE DEVICE COMPRISING AUXILIARY ELECTRODE IN GRID SECTION
Mehmet Esin Ulug, Etobicoke, Ontario, Canada, assignor to Canadian General Electric Company, Limited, Toronto, Ontario, Canada, a corporation of Canada
Filed Sept. 28, 1962, Ser. No. 226,997
6 Claims. (Cl. 313—238)



1. An electron discharge device comprising, a substantially evacuated envelope enclosing a cathode and anode mounted in spaced position, first, second, and third control grids mounted in a spaced sequence from the cathode to the anode; and an auxiliary electrode conductively connected to said third control grid and positioned in close proximity to the cathode to improve the positive voltage characteristics for said third control grid.

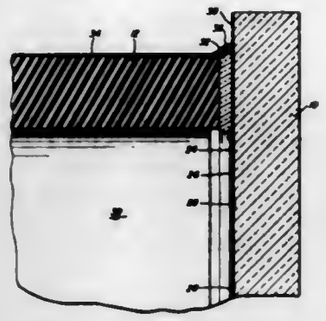
3,275,877

SINGLE MULTI-ELECTRODE ELECTRON TUBE HAVING A DISC SHAPED CERAMIC STEM WITH A RECESSED PORTION IN ONE FACE THEREOF, SAID RECESS PORTION HAVING A METAL LAYER THEREON

Yoshio Murata, Chiba, Japan, assignor to Hitachi Ltd., Chiyoda-ku, Tokyo, Japan, a corporation of Japan

Filed Jan. 28, 1963, Ser. No. 254,289
Claims priority, application Japan, Jan. 31, 1962, 37/3,265; Feb. 24, 1962, 37/8,852; Mar. 9, 1962, 37/11,090, 37/11,091, 37/11,092, 37/11,093
9 Claims. (Cl. 313—250)

1. A single-end multi-electrode electron tube comprising
a disc-shaped ceramic stem having a recessed portion in one face thereof, said recessed portion having a metal layer over the entire surface thereof,
a plurality of vacuum tube electrodes including at least a control grid, screen grid and plate electrode,
supporting means including supports and electrical leads for supporting said electrodes above said ceramic stem,
a ceramic spacer having a pair of isolated metal layers on one surface thereof, two adjacent ones of said electrodes being secured to respective metal layers on said ceramic spacer,
the electrical lead connected to the one of said two adjacent electrodes interposed between the remaining electrodes of said control grid, screen grid and plate electrode passing through said ceramic stem in the recessed portion thereof and coming into electrical contact with said metal layer on said ceramic stem, the electrical leads connected to said remaining electrodes passing through the portion of the ceramic stem isolated from the metal layer thereon.



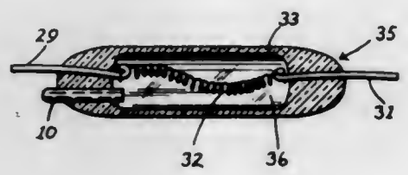
3,275,878

LEAD-IN SEAL FOR EVACUATED ENVELOPE OF AN ELECTRON DISCHARGE DEVICE FOR CONNECTING ELECTRODES LOCATED WITHIN SAID ENVELOPE TO A VOLTAGE SOURCE POSITIONED OUTSIDE SAID ENVELOPE

William H. Wilbanks, Hillsboro, Oreg., assignor to Tektronix, Inc., Beaverton, Oreg., a corporation of Oregon

Filed Feb. 27, 1963, Ser. No. 261,443
9 Claims. (Cl. 313—317)

9. An envelope structure for a cathode ray tube, comprising:
a hollow funnel member of ceramic material having an opening in the larger end thereof;
a face plate of glass material;
a seal layer of electrical insulative glass material fused to the funnel member and joining said face plate to the larger end of said funnel to close the opening in said funnel with a vacuum-tight seal;
a plurality of areas of light transparent, electrically conductive material coated over the inner surface of said face plate, each of said areas being insulatingly spaced from the other areas and having a lead portion extending beneath the seal layer through said seal to the exterior of said envelope; and
a plurality of spaced connector strips of electrically conductive material coated on the outer surface of



said funnel into electrical contact with different ones of the lead portions of said areas.

3,275,879

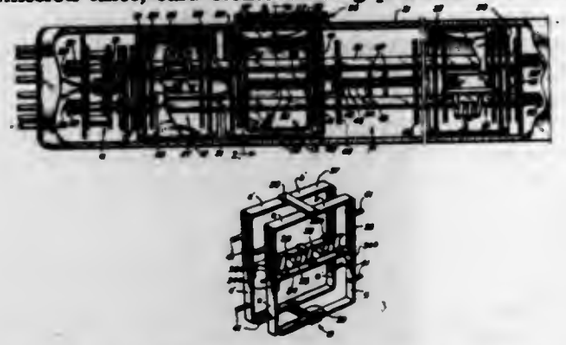
CAPSULATED BULB AND METHOD OF MAKING THE SAME

Philip C. Demarest, Pine Brook, Harry R. Foster, Montville, and Elmo E. Crump, West Caldwell, N.J., assignors to Ohmega Laboratories, Pine Brook, N.J., a corporation of New Jersey

Filed July 31, 1961, Ser. No. 128,245
1 Claim. (Cl. 313—317)

A capsulated bulb comprising: a substantially cylindrical glass wall pervious to light; a fine metal filament within said bulb; two separately-formed glass end members fused to said substantially cylindrical glass wall, one at each end, and each of said members having an axial thickness substantially greater than the thickness of said wall; two relatively heavy metal wires substantially parallel to the axis of said cylindrical wall, one of said wires extending through each of said end members and having an end of each of said relatively heavy wires electrically and mechanically attached to one end, respectively, of said filament to support said filament within the space of said bulb; a tube of fusible metal formed with a miniscule bore and hermetically sealed into one of said end members and extending substantially parallel to the axis of said bulb and spaced from said relatively heavy wire, with one end of said tube opening interiorly of said bulb to evacuate gas from said bulb, said bulb having a substantially gas-free interior.

3,275,880



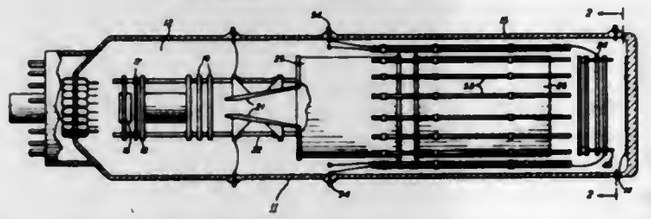
ELECTRON COUPLING SYSTEM, COUPLING THROUGH THE ENVELOPE WALL OF DISCHARGE DEVICE BY ELECTROMAGNETIC COUPLING

Robert Adler, Northfield, Ill., assignor to Zenith Radio Corporation, Chicago, Ill., a corporation of Delaware

Filed Dec. 21, 1962, Ser. No. 246,468
3 Claims. (Cl. 315—4)

1. An electron coupling system comprising:
an envelope of low magnetic loss material;
an electron source for projecting an electron beam along a predetermined path within said envelope;

a coupler having a predetermined reactance disposed in said envelope along said path for transferring energy of a predetermined frequency between said beam and said coupler;
a plurality of transmission lines each with one end electrically connected to said coupler, the other end of at least two of said lines terminating in a common inductive element thereby producing a magnetic field substantially stronger than elsewhere along said transmission lines, said element being positioned in close



proximity to said envelope, and said transmission lines having respective lengths which produce an equivalent reactance at said ends connected to said coupler for placing said coupler in a resonant condition at said frequency;
and means having an inductive member situated outside of said envelope for coupling to said magnetic field of said common element for inductively transferring energy at said frequency between said common element and said inductive member through said envelope.

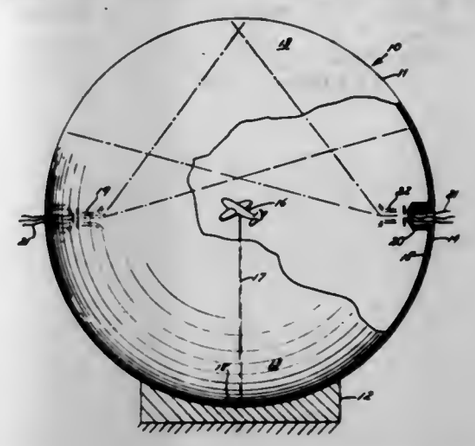
3,275,881

ELECTRON BEAM MODULATING DEVICE

Roger P. Hynes, Murray Hill, and Edward J. Walsh, Morris Plains, N.J., assignors to Bell Telephone Laboratories Incorporated, New York, N.Y., a corporation of New York

Filed Dec. 18, 1962, Ser. No. 247,442
12 Claims. (Cl. 315—13)

1. A cathode-ray tube comprising:
means for forming and projecting a ribbon electron beam;
a pair of deflecting plates for deflecting the beam;
an indicating screen;
a plurality of parallel dielectric rods between the plates and the screen and extending parallel with the direction of the beam deflection; and
four electrodes bonded lengthwise and in quadrature on each rod including a first electrode on each rod facing the deflecting plates, a second electrode on each rod facing the screen with the remaining electrodes being intermediate the first and second electrodes.



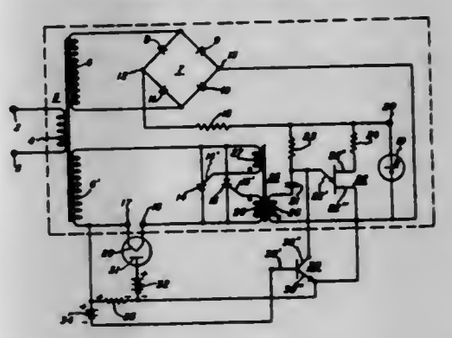
3,275,882

SPHERICAL TRANSPARENT TWO GUN CATHODE RAY TUBE

Milton Morse, 41 Honeck St., Fort Lee, N.J.

Filed May 24, 1963, Ser. No. 283,037
2 Claims. (Cl. 315—13)

1. A spherical oscilloscope device, including: a spherical transparent globe having inner and outer surfaces, a fluorescent coating applied to said inner surface in a sufficiently thin layer to be at least partially transparent when viewed from the outer surface of said globe, a plu-



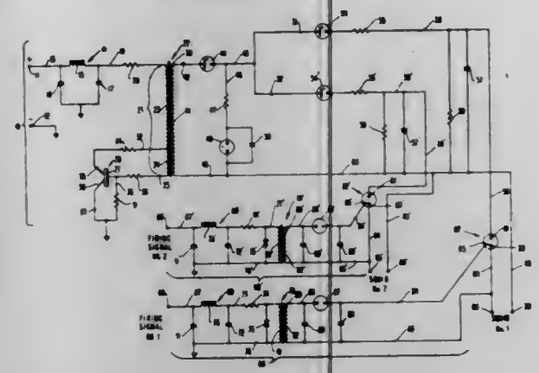
rality of electron guns mounted within said globe, each positioned to project a deflectable electron beam over mutually exclusive areas of said fluorescent coating.

3,275,883

EMISSION CURRENT REGULATOR FOR ION GAUGE

Robert L. Watters, Schenectady, N.Y., assignor to General Electric Company, a corporation of New York

Filed Nov. 1, 1963, Ser. No. 320,654
3 Claims. (Cl. 315—106)



1. In a power supply for the filament of an ion gauge having a thermionic electron-emissive filament and an electron collector, said supply including capacitive means in the control circuit thereof and means for applying power to said filament during a portion of an alternating current power cycle that varies in the opposite direction as changes in the rate of charging of said capacitive means, the improvement of means for varying said rate of charging to effect substantially constant electron emission from said filament comprising: a source of substantially constant charging voltage connected to said capacitive means; a transistor having base, collector and emitter electrodes; means connecting said transistor collector and emitter electrodes in shunt with said capacitive means; a series loop network including said electron collector, a source of unidirectional voltage energizing said electron collector to a voltage relative to said filament at which it collects substantially all of the electrons from said filament, a resistor, and one terminal of said filament; and conductive means connecting said resistor and a source of constant voltage in series voltage-opposing relationship in the base-emitter circuit of said transistor, said source of constant voltage being connected to cause decreased conduction of said transistor and said resistor being connected such that the voltage generated therein by the flow of emission current therethrough increases conduction of said transistor.

3,275,884
ELECTRICAL APPARATUS FOR GENERATING CURRENT PULSES

Louis H. Segall, James C. Morrison, and James Knak, all of Sidney, N.Y., assignors to The Bendix Corporation, Sidney, N.Y., a corporation of Delaware

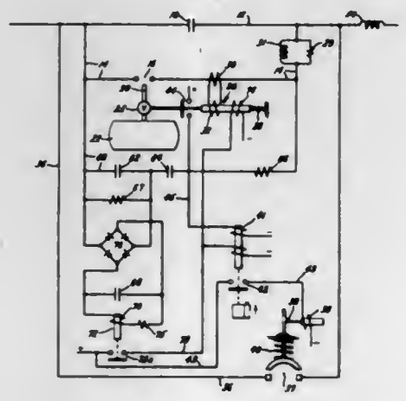
Filed Sept. 21, 1961, Ser. No. 139,713
14 Claims. (Cl. 315—163)

1. In electrical apparatus for generating current pulses of spark intensity, the combination of an arming circuit and a triggering circuit controlling the discharge of the arming circuit, the arming circuit comprising a generator of direct current pulses, a first storage condenser connected to be charged by the said pulses in the arming circuit substantially to the potential of said pulses, a spark gap device, having a first, main discharge gap with a breakdown voltage value appreciably greater than the potential of said pulses, and a second triggering gap of smaller breakdown potential than the first gap and located in proximity to the first gap, and a discharge circuit connected to the main gap of the spark gap device and adapted to be connected to a load device operated by a current pulse of spark intensity, the triggering circuit being adapted to be connected to a source of current pulses and comprising a discriminating filter which passes only pulses of a predetermined character, a pulse voltage step-up transformer having a primary winding and a secondary winding, the primary winding being connected to be fed by filtered pulses of the triggering circuit, a second storage condenser connected to be charged by the secondary winding of the pulse transformer, and a circuit connecting the second storage condenser to the triggering gap of the spark gap device, the second storage condenser being adapted to be charged to a potential higher than the breakdown voltage of the triggering gap and thereafter to discharge through the triggering gap to initiate discharge of the first storage condenser through the main gap of the spark discharge device.

3,275,885
HIGH PRESSURE DISCHARGE LAMP WITH ELECTROLYSIS PREVENTING MEANS

John M. Pomfrett, Kirtland, Ohio, assignor to General Electric Company, a corporation of New York

Filed Apr. 7, 1965, Ser. No. 446,333
1 Claim. (Cl. 315—330)



A discharge lamp comprising a vitreous outer jacket enclosing a quartz arc tube, said arc tube having a pair of main thermionic activated electrodes sealed therein at opposite ends, an ionizable filling within said arc tube including mercury and subject to convection effects during horizontal operation of said lamp, said main electrodes being provided with external connections through seals at opposite ends of said arc tube, and a pair of auxiliary tungsten wire starting electrodes located adjacent one of said main electrodes and extending approximately coextensive therewith on either side and provided with external connections through seals generally side-by-side with that of said adjacent main electrode, said auxiliary electrodes being connected together and joined to the main electrode at the opposite end of the arc tube through a current limiting resistor, whereby one of said electrodes is always located on or above the level of the horizontal plane through the adjacent main electrode irrespectively of the orientation of said lamp, said one electrode being sufficiently heated by the discharge to achieve at all times electron emission adequate to prevent electrolysis in the quartz in the vicinity of the seals.

3,275,886
INTERRUPTED ARC RESPONSIVE PROTECTIVE EQUIPMENT FOR SERIES CAPACITORS

Wilfred F. Skeats, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York

Filed Apr. 13, 1964, Ser. No. 359,218
9 Claims. (Cl. 317—12)

1. In a protective arrangement for a series capacitor that comprises: (1) a gap device connected across the series capacitor and adapted to arc over when the voltage across said series capacitor reaches a first predetermined value, (2) blast valve means to cause a blast of dielectric fluid to flow through said gap device for terminating the flow of arcing current therethrough when the voltage across said series capacitor is maintained below a second predetermined level, and (3) blast valve control means actuatable in response to current flow through said gap device and effective while actuated to maintain said blast valve in an operated condition, the improvement comprising:

(a) seal-in means for maintaining said blast valve in an operated condition during a protracted period of intermittent arcing in which short current pulses flow through said gap device at intervals separated by no-current periods as long as several cycles in duration,

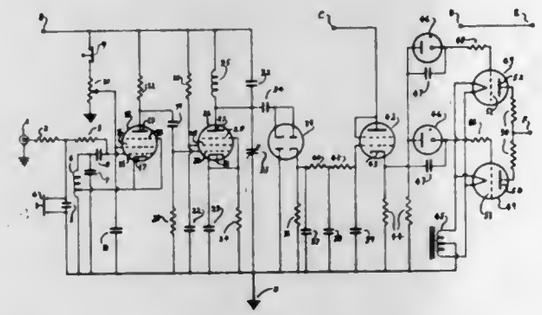
(b) said seal-in means comprising:

(i) a control circuit for said blast valve control means,

(ii) a control capacitor connected in said control circuit across said blast valve control means,

(iii) means normally effective while said gap device is non-conducting for holding the voltage across said control capacitor to a low value insufficient to cause actuation of said blast valve control means comprising a low impedance

connected in said control circuit across said control capacitor during charging of said control capacitor,



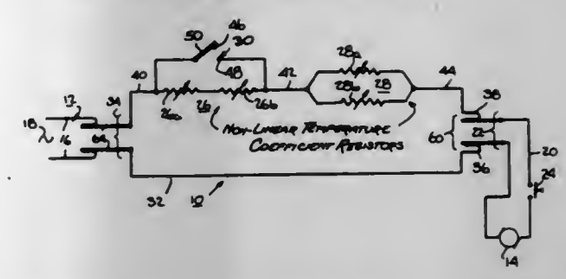
(iv) means for charging said control capacitor in response to arc-over of said gap device,

(v) means including a rectifier connected in said control circuit between said low impedance and said control capacitor for blocking discharge of said control capacitor through said low impedance, and for confining discharge of said control capacitor to a circuit through said blast valve control means, thus prolonging the period in which said blast valve control means is maintained in an actuated condition.

3,275,887
SAFETY MAGNET CONTROLLER

James F. Ellis, R.F.D. 2, Anderson County, Tenn.

Filed Aug. 12, 1963, Ser. No. 301,333
20 Claims. (Cl. 317—13)



9. An electronic circuit for controlling a direct current in an inductive load, comprising in combination, an oscillator having a controlling input, means for connecting said controlling input to some external circuit yielding a primary controlling signal and thereby blocking said oscillator when the primary controlling signal reaches a pre-determined amplitude, a limiting amplifier stage coupled to an output of said oscillator in such manner as to preclude the possibility that said limiting amplifier might of itself act as an oscillator, a rectifier coupled to the output of said limiting amplifier and yielding an output upon receiving oscillating energy from said limiting amplifier, a filtering circuit receiving the rectified output of said rectifier and removing therefrom most of the frequency component of said oscillator but passing on the true amplitude of said rectified output as well as any rapid changes thereof and thus forming a first controlling bias, means receiving said first controlling bias and yielding therefrom a second controlling bias less in voltage by a fixed amount from that of said first controlling bias so that said second controlling bias will reverse polarity upon sufficient reduction in amplitude of said first controlling bias, an electronic switching component of non-mechanical variety having both a controlling element and current-carrying elements, said second controlling bias being applied to said controlling element, said current-carrying elements being suitable for series connection between a source of direct current electric power and the said inductive load and having capability to withstand such voltage surges as may be generated upon sudden release of the inductive load, said switching component being such that said controlling element must be continually excited with said second controlling bias of a particular polarity in order to maintain said current-carrying elements in an "on" condition, and that upon reversal of polarity of said second controlling bias, as by controlled oscillator blockage and subsequent effects, said current-carrying elements will revert to and be held in an "off" condition.

3,275,888
POWER LINE PROTECTING SURGE CURRENT LIMITER FOR SINGLE-PHASE ELECTRIC MOTORS

W. Robert Dresser, Trumbull, Conn., assignor to Barlow Controls, Inc., Stamford, Conn., a corporation of New York

Filed Sept. 12, 1963, Ser. No. 308,553
11 Claims. (Cl. 317—13)

1. A power line protecting surge current limiter for single-phase electric motors, said limiter comprising:

(a) a current limiting resistor having a substantial negative coefficient of resistance and a resistance value at room temperature large enough to limit current flow to at least approximately the rated current capacity of the power line,

(b) a two-branch circuit adapted to be connected between a power line and a single-phase electric motor,

(c) said current limiting resistor being series interposed in one of said branches so that it will be heated upon passage of current therethrough,

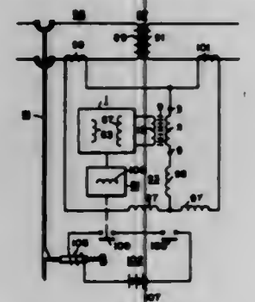
(d) neither current branch having therein a resistor with a positive temperature coefficient of resistance,

(e) a normally open switch connected in shunt with said resistor,

(f) a heat responsive element controlling the normally open switch and operable to close the switch when heated for a period of time sufficient to start the motor when the motor is not in blocked rotor condition,

(g) said current limiting resistor being disposed in heat exchange relationship with the heat responsive element so that when potential is supplied by the power line the current limiting resistor first will maximally limit the current supplied to the motor, then the resistance value of the current limiting resistor will decrease due to its temperature increase while the effective resistance of the motor increases, and then the heat generated by the current limiting resistor will operate the heat sensitive element to close the normally open switch and shunt the current limiting resistor after the motor has started, and

(h) resistance holding means connected in said circuit to generate heat when the switch is closed in order to maintain the switch closed.



3,275,889
PROTECTION NETWORK

Robert L. Sharp, Pequannock, and William E. Glassburn, Mountainside, N.J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Original application June 13, 1958, Ser. No. 741,854, now Patent No. 3,144,590, dated Aug. 11, 1964. Divided and this application July 15, 1963, Ser. No. 295,105
18 Claims. (Cl. 317—14)

8. In a relaying device, first and second input circuits, first and second relay devices, each said device including operating and a restraining winding means and a switch actuated as a function of the difference in the energization of its said winding means, means connecting said restraining winding means of said first device to at least one of said input circuits for energization in accordance with the magnitude of an electrical quantity in said one

input circuit, means connecting said operating winding means of said first device to both of said input circuits for energization in accordance with the difference in said magnitudes of said electrical quantity in said input circuits, means including filter means connecting said restraining winding means and said operating winding means of said second device to said input circuits for energization in accordance with the difference in magnitudes of an alternating electrical quantity appearing at said input circuits, said filter means being effective to at-

tenuate the passage of first portions of said alternating quantity to said restraining winding means, said first portions being those which occur at all frequencies other than those which are substantially of a selected frequency whereby said restraining winding means is energized solely by second portions of said quantity which occur at frequencies substantially at said selected frequency, said filter means being effective to attenuate the passage of said second portions of said alternating quantity to said operating winding means whereby said operating winding means is energized solely with said first portions of said quantity.

3,275,890

TRANSFORMERS EQUIPPED WITH CIRCUIT INTERRUPTER

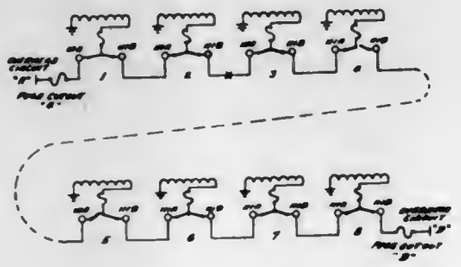
Charles J. Carlson, Jr., and Donald J. Farmer, Pine Bluff, Ark., assignors to Central Transformer Corporation, Pine Bluff, Ark., a corporation of Arkansas

Filed Aug. 20, 1963, Ser. No. 303,368
1 Claim. (Cl. 317—15)

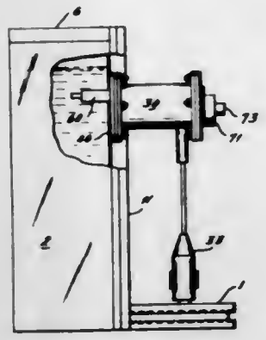
In combination with a high voltage loop circuit having a plurality of terminals of the same polarity, an electric transformer having a pair of terminals electrically connected respectively with two of said loop circuit terminals, a fluid-tight tank containing a fluid having dielectric properties, said tank having an aperture therein and a mounting pad surrounding said aperture, electric transformer components including a primary winding and a secondary winding submerged in said fluid within said tank, said primary winding having a terminal selectively connectible with and disconnectible from either or both of said pair of terminals, a fluid-tight housing connected to said tank in alignment with said aperture, said housing including:

(a) a hollow body of insulating material,

(b) a mounting plate of insulating material closing one end of said hollow body and secured thereto in fluid-sealing relationship,



(c) means for securing said mounting plate on said mounting pad in fluid-sealing relationship about said aperture,



(d) a face plate of insulating material secured in fluid-sealing relationship to the end of said hollow body opposite said mounting plate,

(e) said fluid-tight housing being charged with dielectric fluid different from that in said tank and having both dielectric properties and arc-suppressing properties,

said housing containing a pair of independently operable switches enveloped by said dielectric fluid, said switches having a common stationary contact, a conductor extending through said mounting plate electrically connecting said common stationary contact with said primary winding terminal, a movable contact member for each switch, a pair of conductors extending through said hollow body electrically connecting the movable contact member of each switch respectively with one of said pair of terminals whereby:

(1) when both of said switches are in closed circuit position, a series circuit relationship is established between said pair of terminals so that said switches collectively constitute a series connection between two of the terminals in said high voltage loop circuit,

(2) when either of said switches is in closed circuit position, the primary of said transformer is energized from the corresponding terminal of said high voltage loop circuit, and

(3) when one of said switches is in open circuit position, said high voltage loop circuit is interrupted at the open one of said switches,

and means on the exterior of said face plate for moving said switches independently and selectively into and out of closed circuit position.

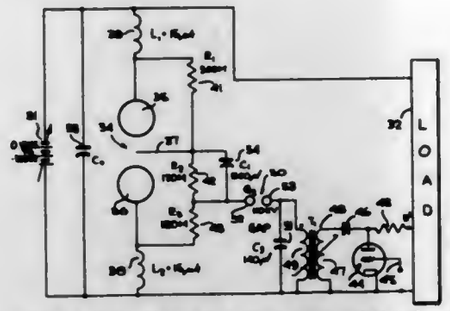
3,275,891

TRIGGERED ARC GAP OPERABLE OVER A WIDE RANGE OF SUPPLY VOLTAGE VARIATIONS

Joseph P. Swanson, Portola Valley, Calif., assignor, by mesne assignments, to Energy Systems, Inc., Palo Alto, Calif., a corporation of California

Filed Aug. 14, 1962, Ser. No. 216,864
7 Claims. (Cl. 317—16)

1. A system for protecting a load circuit from a high voltage source when a fault occurs in the load circuit, comprising:



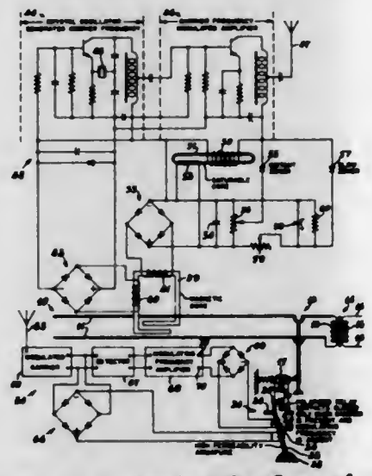
an arc gap discharge arrangement including a pair of opposed spherical electrodes and an intermediate needle electrode;

means for connecting said opposed spherical electrodes to opposite terminals of said source for causing an electric field to be produced between said opposed electrodes;

said connecting means comprising inductance means serially connected between each of said opposed electrodes and a respective terminal of said source;

said intermediate electrode being physically disposed only on an equipotential surface of said electric field;

means for normally maintaining said intermediate electrode at the potential of said equipotential surface whereby said electric field between said opposed electrode is not disturbed;



trigger means for changing the potential of said intermediate electrode so as to distort said electric field when a fault occurs in the load circuit, said trigger means including a voltage pulse generating means having a supply of power independent of said high voltage source, whereby said protection system is operative over a wide range of voltage variations of said high voltage source.

3,275,892

SYSTEM FOR MEASURING CURRENT FLOW IN HIGH VOLTAGE ELECTRIC POWER LINES FOR RELAYING AND OTHER PURPOSES

Edmund O. Schweitzer, Jr., 1002 Dundee Road, Northbrook, Ill.

Filed June 7, 1963, Ser. No. 286,345
25 Claims. (Cl. 317—60)

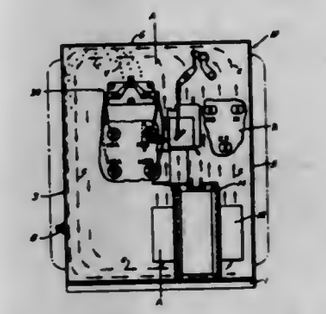
1. Apparatus for measuring the flow of current in a high voltage electric power transmission line conductor and transmitting a corresponding signal to a remote point comprising:

(a) a transmitter operating at the potential of said conductor and arranged and adapted to transmit a carrier frequency,

(b) a modulating circuit connected to said transmitter for normally continuously applying a modulating frequency to said carrier frequency,

(c) means responsive to current flow in said conductor for varying the frequency of said modulating frequency as a function of the magnitude of such current flow,

(d) a receiver at said remote point arranged and adapted to receive said carrier frequency modulated by said modulating frequency, and



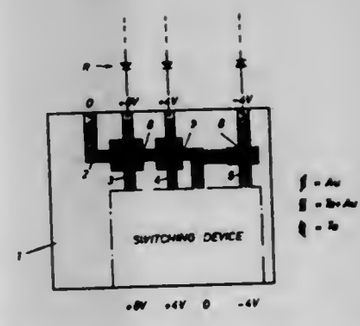
(e) means responsive to the received modulating frequency.

3,275,893

GAS COOLED ELECTRICAL EQUIPMENT FOR DISTRIBUTION SYSTEMS

Webb R. Phillips, James L. Gaddy, Jr., and Reuben E. Russell, Jr., Pine Bluff, Ark., assignors to Central Transformer Corporation, Pine Bluff, Ark., a corporation of Arkansas

Filed May 31, 1963, Ser. No. 284,496
4 Claims. (Cl. 317—100)



1. In an electric power distribution system, the combination comprising, a transformer having a primary winding, a circuit interrupter having at least two poles, one of said poles being connected to said primary winding, a high voltage supply conductor connected to another pole of said circuit interrupter, and a gas-filled housing surrounding said transformer and circuit interrupter, said housing having a vertical dimension substantially greater than the vertical dimension of said transformer and a horizontal dimension substantially greater than the horizontal dimension of said transformer, said transformer being disposed within said housing adjacent the lower extremity of the vertical dimension of said housing and near one extremity of the horizontal dimension thereof, and said circuit interrupter being disposed within said housing near the opposite extremities of said vertical and horizontal dimensions, whereby gas convection currents induced by heat generated in said transformer have a circulation path downwardly past said circuit interrupter and upwardly past said transformer, in succession, to cool said transformer.

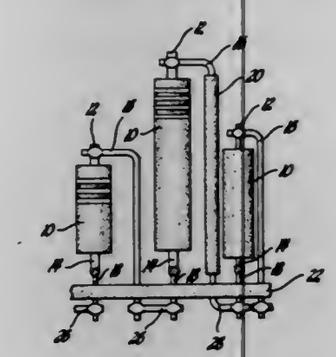
3,275,894

THIN-FILM SWITCHING CIRCUIT

Hans Reiner, Gerlingen, near Stuttgart, Germany, assignor to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware

Filed June 10, 1964, Ser. No. 374,129
Claims priority, application Germany, June 14, 1963, St 20,732
3 Claims. (Cl. 317—101)

1. A thin-film switching circuit for minimizing the effects of inductance in lead-in wires comprising:

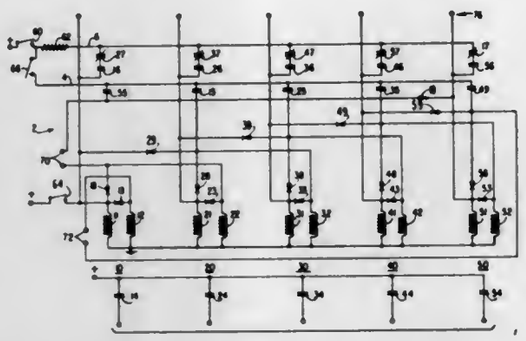


a board of insulating material,

a first conductor on said board including the combination of a layer of material having good conductivity and a layer of material of poor conductivity,

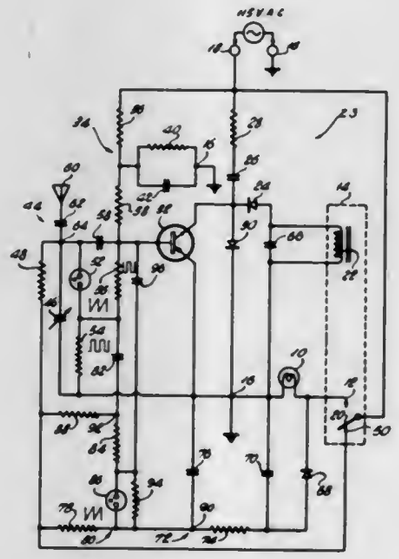
said material of poor conductivity being oxidized in part to form a dielectric layer,

a second conductor on said board composed of a good conductor arranged to cross said first conductor opposite the dielectric layer,
said first and second conductors forming blocking capacitors where they cross over the dielectric layers,
switching means on said board,
means for connecting to positive, negative and zero potentials,
said first conductor connecting between a positive potential and said switching means, and
said second conductor connecting between said zero potential and said switching means.



3,275,895
ELECTRONIC ASSEMBLY WITH BUTT WELDED AUXILIARY STANDARD LEADS SUPPORTING COMPONENTS
James H. Flaherty, Hales Corners, Wis., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed Aug. 11, 1964, Ser. No. 388,859
2 Claims. (Cl. 317—101)

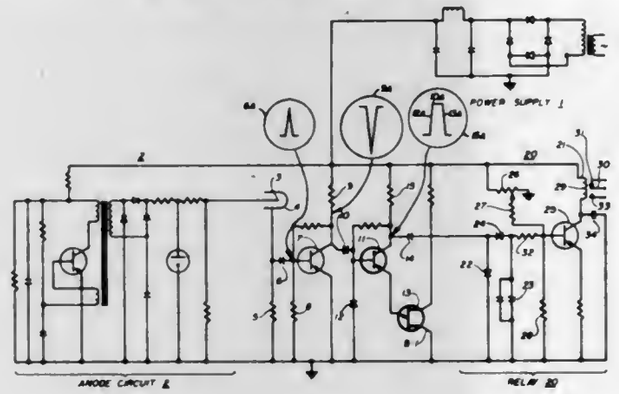
1. An electronic assembly including a group of substantially cylindrical components each having leads extending axially therefrom in opposite directions, auxiliary leads welded to the first mentioned leads formed to extend in the same direction parallel to the axis of the component, at least one of the auxiliary leads for each component being butt welded to its corresponding first mentioned lead, an apertured support member, the free ends of the auxiliary leads extending through the apertured member to support and locate the components, and electrical conductor members welded to the auxiliary leads to form an electronic assembly, the auxiliary leads all being of the same diameter and composition to facilitate welding thereof to said conductor members.



3,275,896
SEQUENTIAL COUNTING CIRCUIT USING DIFFERENTIALLY OPERATED RELAYS
Wyman L. Deeg, Glenview, Ill., assignor to C. P. Clare & Company, Chicago, Ill., a corporation of Delaware
Filed Apr. 21, 1964, Ser. No. 361,598
9 Claims. (Cl. 317—140)

1. A counting circuit operated by a series of input signals comprising a plurality of counting stages arranged in a counting sequence, each of the stages including a pair of windings providing oppositely poled flux fields of substantially the same value and switching means operated by the application of the flux field resulting from the energization of one winding, a source of input signals, circuit means connected between the signal source and the stages for applying successive input signals to the windings in consecutive pairs of adjacent stages in the counting sequence, said circuit means including the switching means in the adjacent stage lower in the counting sequence for applying an input signal to one winding in one stage in the pair to operate its associated switching means and applying an input signal to both of the windings in the other stage of the pair to inhibit operation of the switching means in this other stage, said circuit means also including a holding circuit for each of the stages including an

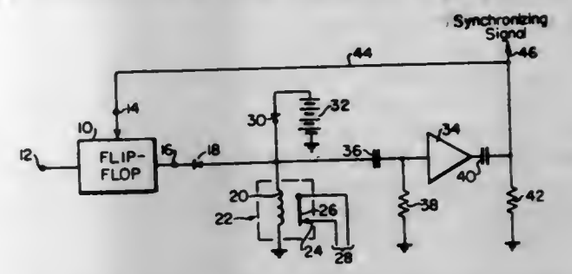
energizing circuit connected to one of the windings in each stage through the switching means in the next highest stage in the counting sequence, and start circuit means connected to one winding in one of the stages to operate this one stage to prepare the counting circuit for operation.



3,275,897
TOUCH CONTROL CIRCUIT
Carl E. Atkins, Montclair, N.J., assignor to Tung-Sol Electric Inc., a corporation of Delaware
Continuation of application Ser. No. 277,888, May 3, 1963. This application June 22, 1965, Ser. No. 469,050
4 Claims. (Cl. 317—146)

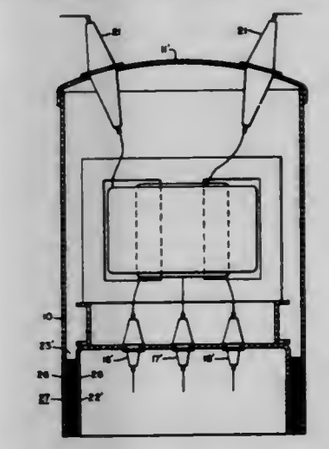
1. In a touch responsive circuit of the type having a switching circuit which in response to controlling signals energizes a relay to position the armature of the relay in a first position and deenergizes the relay to position the armature of the relay in a second position, the improvement comprising:
(a) an electric signal means including an oscillator coupled to the switching circuit providing a series of first signals to the switching circuit when the armature is in the first position to keep the relay energized and providing a series of second signals to the switching circuit when the armature is in the second position to keep the relay deenergized;

(b) a touch responsive means coupled to the oscillator of the electric signal means which while touched when the relay is in the first position and controlled by the series of first signals will deenergize the relay and which while touched when the relay is in the second position and controlled by the series of second signals will energize the relay;
(c) means coupled to the switching circuit and operative when the relay armature is in the first position for keeping the relay armature in the first position for a period after the relay armature is initially positioned in the first position irrespective of whether the touch responsive means is touched or not; and
(d) means coupled to the switching circuit and including a transition oscillator for keeping the relay in the second position for a period after the relay armature is initially positioned in the second position, irrespective of whether the touch responsive means is touched or not.



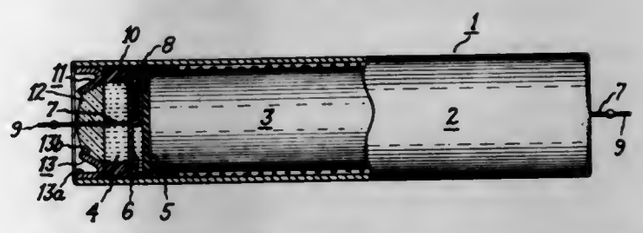
3,275,898
VOLTAGE CONTROL CIRCUIT FOR CONVERTING IRREGULAR VOLTAGE SPIKES TO PULSES OF PREDETERMINED AMPLITUDE AND DURATION
John B. Rosso and Donald E. Seaver, Tulsa, Okla., assignors to National Tank Company, Tulsa, Okla., a corporation of Nevada
Filed July 10, 1963, Ser. No. 294,014
4 Claims. (Cl. 317—148.5)

1. A circuit for producing a voltage pulse, including,
a source of a voltage pulse of very short duration,
a capacitor connected by a first of its plates to the source,
a triode type of transistor connected to the second plate of the capacitor at its base,
a diode connected to the base of the transistor so as to function as a discharge path to ground for the capacitor,
a unijunction transistor connected between the emitter of the triode transistor and ground,
a resistance of predetermined value connected to the collector of the triode transistor,
and a relay circuit connected between the junction of the resistance and the collector and a source of low voltage power to receive the output voltage pulse produced by the foregoing circuit.



3,275,899
RELAY CONTROL CIRCUIT
Nicholas De Wolf, Boston, Mass., assignor to Teradyne, Inc., Boston, Mass., a corporation of Massachusetts
Filed Sept. 9, 1963, Ser. No. 307,519
7 Claims. (Cl. 317—148.5)

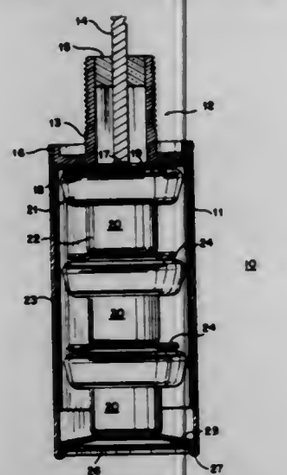
1. A circuit for providing a pulse of electrical energy which is substantially coincident with the first movement of the armature of a relay comprising, in combination, a relay, said relay having an inductive coil and an armature, means for applying a control signal to said relay coil to cause said relay to change state, means responsive to the induced voltage pulse appearing across said relay



coil when the armature of said relay begins to move for generating said pulse, said last mentioned means including in series relationship, a first differentiating circuit, a amplifier and a second differentiating circuit.

3,275,900
CAPACITOR-TRANSFORMER COMBINATION
Merrill G. Leonard, Brookfield Township, Trumbull County, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Filed May 3, 1963, Ser. No. 277,945
3 Claims. (Cl. 317—157.62)

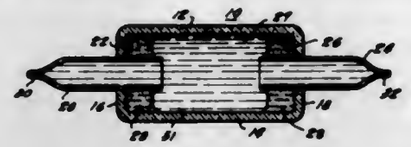
1. A capacitor-transformer combination comprising an enclosure including a tank and a cover for the tank, a transformer core within the enclosure, transformer windings on the core, said tank having a generally annular recess at the bottom thereof, a generally annular capacitor disposed in said recess, and said capacitor being connected in circuit relation with one of said transformer windings.



3,275,901
SEALED ELECTRICAL ASSEMBLY
Robert B. Merritt, Daytona Beach, Fla., and Raymond M. Trewhella, Irmo, S.C., assignors to General Electric Company, a corporation of New York
Filed Mar. 14, 1963, Ser. No. 265,163
9 Claims. (Cl. 317—230)

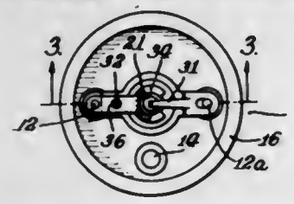
1. A hermetically sealed electrical assembly comprising, in combination, a casing containing an electrolyte and an electrical component immersed therein, said casing having a terminal lead extending outwardly through said

opening and composed of a film-forming metal wire having a dielectric oxide film formed thereon, and a closure hermetically sealing said opening and electrically insulating said terminal lead from said casing, said closure comprising metal ring means joined to said casing and having glass material retained therein in fused sealing relation with said ring means and with said terminal lead passing therethrough, said glass material and said terminal lead having substantially matching coefficients of thermal expansion, and said ring means having a coefficient of thermal expansion at least substantially equal to that of said glass material, said glass material having the approximate composition of 35% BaO, 25% Al_2O_3, 35–40% B_2O_3, and 0–5% CeO_2.



3,275,902
SEALED ELECTROLYTIC CAPACITOR IN HERMETICALLY SEALED CASE
John W. McHugh, Fillmore, and Ronald A. Baker, Indianapolis, Ind., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Filed Aug. 1, 1963, Ser. No. 299,442
12 Claims. (Cl. 317—230)

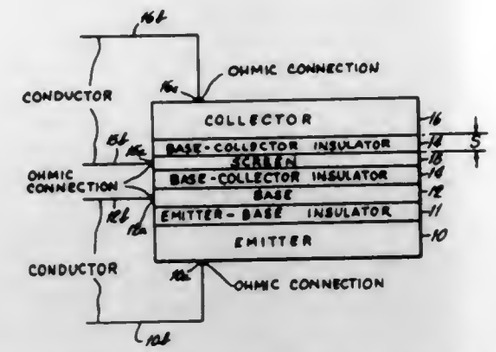
1. In a hermetically sealed capacitor, a capacitor cell, having a head of one polarity and a container of the other, disposed in a case comprising first and second closed openings, a pressure responsive insulative seal mechanically securing said head in closing engagement with the container, insulative means for isolating said cell from the case, hermetically sealed means adjacent said head for closing said first opening of said case, said sealed means including an insulated terminal electrically connected with the head of said cell, a closure member electrically connected to the container of said cell and hermetically closing the second opening of said case, and pre-load means disposed between the container of the cell and said closure member for exerting a sealing force on the cell, the location of said closure member being selectable for controlling the magnitude of said force.



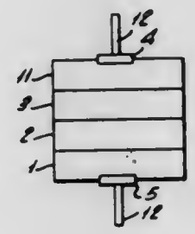
3,275,903
ELECTROCHEMICAL COULOMETER AND METHOD
John J. Banewicz, Dallas, and Gary R. Argue and Richard F. Stewart, Richardson, Tex., assignors, by mesne assignments, to Self-Organizing Systems, Inc., Dallas, Tex., a corporation of Texas
Filed Aug. 3, 1962, Ser. No. 214,758
14 Claims. (Cl. 317—231)

1. An electrochemical coulometer of the type that functions by electrolytic transfer of a measured species in a reversible redox system that comprises two spaced apart compartments, each of said compartments opening into an enclosed area, each of said two spaced apart compartments containing a solution of the measured species in a solvent, the width of each of said compartments being sufficiently small that the solution contained therein is retained in said compartments by capillary forces, a conductive liquid immiscible with said solvent filling said enclosed area and any portion of said two compartments that does not contain said solution, the solubility of said species being substantially less in said conductive liquid

than in said solvent whereby said conductive liquid provides both a diffusion barrier and a conductive path between said compartments, a first electrode contacting said conductive liquid and the solution contained in one of said compartments, a second electrode contacting said conductive liquid and the solution contained in the other of said compartments, and at least one sealable opening for communicating with said enclosed area.



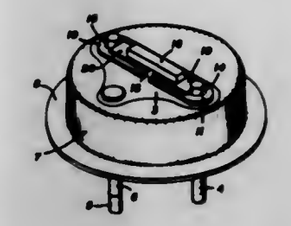
3,275,904
SEMICONDUCTOR DEVICE
Warren H. Parker, Phoenix, Ariz., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Filed June 26, 1961, Ser. No. 119,731
3 Claims. (Cl. 317—234)



1. In a semiconductor device having a base support structure with a pair of conductor members protruding from one side of said structure, and a semiconductor die unit supported by said structure and positioned between said conductor members, the combination including a first connector member making a connection to the semiconductor die unit and electrically connected to one of said conductor members, a connector part derived from said first connector member and secured to the other of said conductor members, said first connector member and said connector part being physically and electrically separate from each other in the final device but extending in a straight line between said conductor members and initially being one piece to facilitate the alignment of said first connector member relative to said semiconductor die unit and said base support structure in the manufacture of said device, a second connector member electrically connected to said other conductor member and to said semiconductor die unit, said second connector member and said connector part having portions in overlapping relationship relative to each other with means interlocking the same to facilitate the alignment of said second connector member relative to said semiconductor die unit and said base support structure in the manufacture of said device, and solder joints connecting said first and second connector members to the respective conductor member.

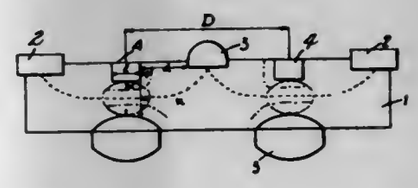
3,275,905
THIN FILM TETRODE
Solomon R. Pollack, Philadelphia, Pa., assignor to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed May 31, 1963, Ser. No. 284,607
11 Claims. (Cl. 317—234)

1. A thin film tunnel emission device comprising a first electrically conductive metallic film, a second electrically insulating film in contact with said first film, a third electrically conductive metallic film in contact with said second film, a fourth electrically insulating film in contact with said third film, a fifth electrically conductive metallic film inserted or sandwiched within said fourth film such that said fifth film is in contact on both sides with said fourth film, a sixth electrically conductive metallic film in contact with said fourth film and an ohmic connection provided to each of said first, third, fifth and sixth electrically conductive metallic films.



3,275,906
MULTIPLE HETERO-LAYER COMPOSITE SEMICONDUCTOR DEVICE
Yasuo Matsukura and Jyoji Oda, Tokyo, Japan, assignors to Nippon Electric Company Limited, Tokyo, Japan, a corporation of Japan
Filed Aug. 14, 1963, Ser. No. 302,063
Claims priority, application Japan, Aug. 20, 1962, 37/35,895
2 Claims. (Cl. 317—234)

1. In a semiconductor device having a plurality of layers of semiconductor material produced by the epitaxial growth method and in which contiguous layers are of opposite conductivity type; an intermediate layer in said device composed of alloyed Si and Ge of one conductivity type, said intermediate layer being bounded on both sides by layers of Si of a conductivity type opposite said one type, and a further layer of alloyed Ge and Si contiguous one of said opposite conductivity layers of Si.

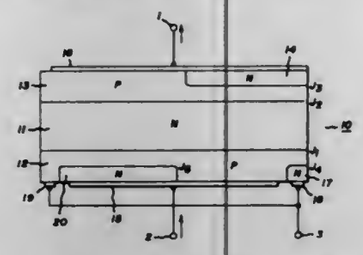


2. In a semiconductor device having a plurality of layers of semiconductor material produced by the epitaxial growth method; an intermediate layer in said device composed of alloyed Si and Ge, said layer having a gradually increasing concentration of Ge in the direction of layer growth, and said layer being bounded on the side of least Ge concentration by an opposite conductivity layer of Si, and on the side of greatest Ge concentration by an opposite conductivity layer comprising Ge in a concentration equal to the concentration of Ge in the intermediate layer at the adjacent boundary.

3,275,907
SEMICONDUCTOR DEVICE MOUNTING WITH EMBEDDED THERMAL MATCHING CONTACT MEMBERS
William Blackford, Fayetteville, N.Y., assignor to General Electric Company, a corporation of New York
Filed Apr. 5, 1961, Ser. No. 100,899
2 Claims. (Cl. 317—234)

1. A semiconductor device comprising a generally planar insulating base member having a pair of leads extending therethrough substantially perpendicular to the major faces of said base member, a pair of respective planar conductive members adjacent the respective leads, each conductive member including a metal plate embedded in said base member and providing a planar conductive surface elevated from the surface of said base member, said conductive members being in insulated relationship with respect to one another and each having a portion closely spaced from the respective lead to which it is adjacent, a bar of semiconductor material having a pair of end portions, one of said end portions being conductively secured to one of said conductive members by a first mass of solder which extends to and forms a conductive connection with one of said leads, and the other of said end portions being conductively secured to the other of said conductive members by a second mass of solder which extends to and forms a conductive connection with the other of said leads.

3,275,908
FIELD-EFFECT TRANSISTOR DEVICES
Jean Grosvalet, Paris, France, assignor to CSF-Compagnie Generale de Telegraphie Sans Fil, a corporation of France
Filed Mar. 8, 1963, Ser. No. 263,916
Claims priority, application France, Mar. 12, 1962, 890,695
3 Claims. (Cl. 317—235)

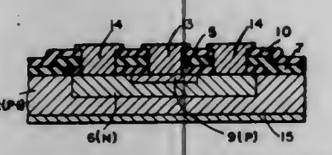


1. A field effect transistor comprising a semiconductor body of one conductivity type having first and second parallel planar sides, an annular ring of opposite conductivity type recessed within the plane of said first side, source and drain electrodes mounted on said first side, concentrically disposed about said ring, a gate electrode mounted on said ring for providing space charge modulation within said semiconductor body, a region of opposite conductivity type formed on said second side to provide for space charge bias control, and wherein the spacing between said drain and gate electrodes is greater than half the width of the semiconductor body between the areas of opposite conductivity type.

3,275,909
SEMICONDUCTOR SWITCH

Frank W. Gutzwiller, Auburn, N.Y., assignor to General Electric Company, a corporation of New York

Filed Dec. 19, 1963, Ser. No. 331,776
4 Claims. (Cl. 317—235)

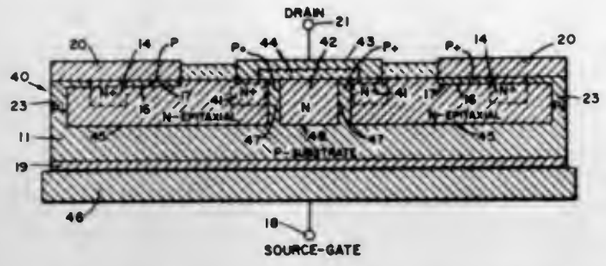


1. A bilateral controllable semiconductor switching device comprising a body of semiconductor material including five layers of one and the opposite conductivity types, layers of one conductivity type being interleaved with layers of the opposite conductivity type forming a plurality of P–N junctions therein, a first main current carrying electrode in low resistance ohmic contact with a surface of an external layer of said body and an exposed surface of an adjacent intermediate layer, a second main current carrying electrode in low resistance ohmic contact with a surface of the other external layer of said body and an exposed surface of an adjacent intermediate layer, a gate region of the same conductivity type as said external layers of said body adjacent said intermediate layer contacted by said first main current carrying electrode, and gating electrode means in ohmic contact with said gate region and with the adjacent intermediate layer to provide for switching the semiconductor device between high and low impedance states for current through said device in opposite senses.

3,275,910
PLANAR TRANSISTOR WITH A RELATIVE HIGHER-RESISTIVITY BASE REGION

Alvin B. Phillips, Scottsdale, Ariz., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois

Filed Jan. 18, 1963, Ser. No. 252,341
3 Claims. (Cl. 317—235)

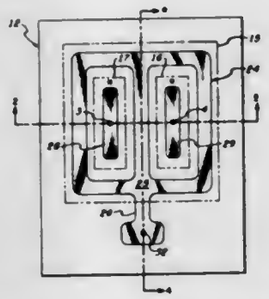


3. An improved transistor comprising a semiconductor crystal element of relatively low resistivity material, a layer of semiconductor material of substantially uniform thickness on said crystal element having a plane surface, a thin emitter region of relatively low resistivity material extending into said layer from said plane surface and defining in said layer an emitter junction extending to said surface and surrounding said emitter region at said surface, a base region in said layer surrounding said emitter region at said surface and bounded by a smooth, regular and abrupt collector junction formed, at the deepest part thereof, between said layer and said crystal element and extending through said layer to said plane surface, a third region extending from said surface completely through said layer and defining the portion of said collector junction extending through said layer, and a protective coating of insulating material completely covering said emitter and collector junctions at said surface, the material in said base region having a relatively high resistivity value for increasing the avalanche breakdown voltage of said junctions, with the low resistivity of the material in said emitter region and that in said crystal element decreasing the saturation voltage of the transistor.

3,275,911
SEMICONDUCTOR CURRENT LIMITER

George C. Onodera, Phoenix, Ariz., assignor to Motorola, Inc., Franklin Park, Ill., a corporation of Illinois

Filed Nov. 6, 1963, Ser. No. 321,852
9 Claims. (Cl. 317—235)

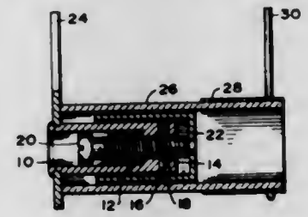


1. A field effect semiconductor device including in combination, a semiconductor crystal element of a selected conductivity type, a first semiconductor layer on said crystal element of a conductivity type opposite to said selected conducting type and having portions which form first and second channel regions which merge together, said first layer having portions of said opposite conductivity type forming a source connection to said first channel region and a drain connection to said second channel region, said channel regions and said crystal element forming a first rectifying junction therebetween, a second semiconductor layer of said selected conductivity type bounding only said first channel region on the side thereof opposite said crystal to form a second rectifying junction, said crystal element forming a first gate coupled to said first and second channel regions and said second layer forming a second gate coupled only to said first channel region, said first and second channel regions having thickness and length dimensions related to each other so that the pinch-off current and voltage values of said second channel region exceed those of said first channel region.

3,275,912
MICROELECTRONIC CHOPPER CIRCUIT HAVING SYMMETRICAL BASE CURRENT FEED

Hans J. Kunz, Raleigh, N.C., assignor to Sperry Rand Corporation, Great Neck, N.Y., a corporation of Delaware

Filed Dec. 17, 1963, Ser. No. 331,164
5 Claims. (Cl. 317—235)



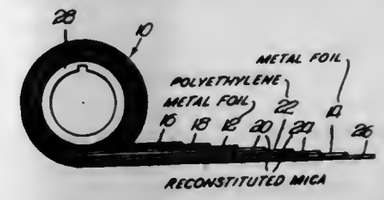
1. A microelectronic device comprising
a pair of transistors formed on a single wafer of semiconductive material, each of said transistors having a base and two additional electrodes,
the bases of said transistors being connected together through said wafer,
one of said additional electrodes of one of said transistors being connected through said wafer to the electrode of the other of said transistors corresponding to said one electrode,

the other of said additional electrodes of one of said transistors and the electrode of the other of said transistors corresponding thereto being formed on the same surface of said wafer within an area which is common to said bases of both transistors,
a base ohmic contact on said area completely surrounding the other electrode and said electrode corresponding thereto,
said contact having a central portion passing between said other electrode and said electrode corresponding thereto, and
a tab connected to said central portion of said contact, said tab being isolated from said wafer by a layer of insulating material,
one end of said tab being relatively narrow with respect to the other end thereof,
said relatively narrow end being connected to said central portion of said contact.

3,275,913
VARIABLE CAPACITOR

Clayton H. Blanchard, Horseheads, N.Y., and Keith S. McIntosh, Derrick City, Pa., assignors to LRC Electronics Incorporated, Horseheads, N.Y., a corporation of New York

Filed Nov. 20, 1964, Ser. No. 412,755
9 Claims. (Cl. 317—249)

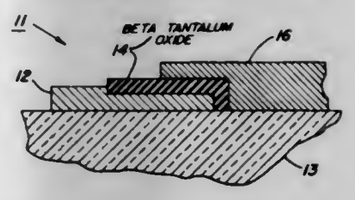


1. A trimmer capacitor comprising
a hollow conductive tubular member terminated at one end by a flat threaded transverse portion, the other end of said member being open,
a plate in a spaced relationship with said transverse portion along the longitudinal axis thereof integrally connected thereto by means of a post at one edge of said plate and transverse portion, said plate having threads in register with the threads in said transverse portion,
an axially movable core closely surrounding said tubular member,
means disposed between said transverse portion and said plate for exerting a force on said plate to cause it to flex about said post,
a screw threaded through said transverse portion and said plate fixedly connected to said core,
a tube of dielectric material closely surrounding said core attached to said tubular member at said other end thereof, and
a conductive coating on the outer surface of said tube for a portion of its length.

3,275,914
ELECTRIC CAPACITOR HAVING DIELECTRIC SPACER OF RECONSTITUTED MICA INTERLEAVED WITH SOLID PLASTIC

Paul S. Hoffman and William M. King, Springfield, Ill., assignors to Sangamo Electric Company, Springfield, Ill., a corporation of Delaware

Filed Sept. 19, 1963, Ser. No. 309,993
2 Claims. (Cl. 317—258)

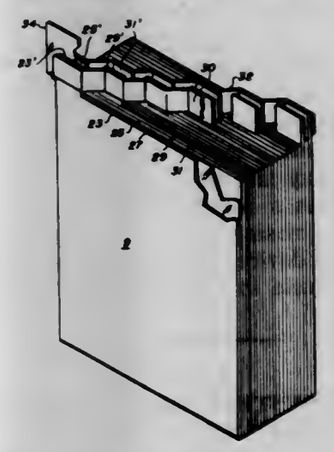


2. An electric capacitor having high Q and long life at high A.C. voltage operating levels and discharge frequencies comprising at least a pair of metal foil armatures, an interposed dielectric spacer therebetween including at least one sheet of solid dielectric material selected from the group consisting of irradiated polyethylene, polyethylene, polypropylene, and polytetrafluoroethylene and a layer of highly porous reconstituted mica overlying each of the two sides of solid dielectric sheet material and substantially coextensive therewith, said assembly being impregnated with castor oil, said webbing of reconstituted mica accommodating thorough impregnation by the castor oil to fill all voids in the assembly and holding the castor oil at the foil and film surfaces, said capacitor having good corona resistance, high Q, and high voltage strength.

3,275,915
BETA TANTALUM THIN-FILM CAPACITORS

Alfred J. Harendza-Harinxma, Trenton, N.J., assignor to Western Electric Company, Incorporated, New York, N.Y., a corporation of New York

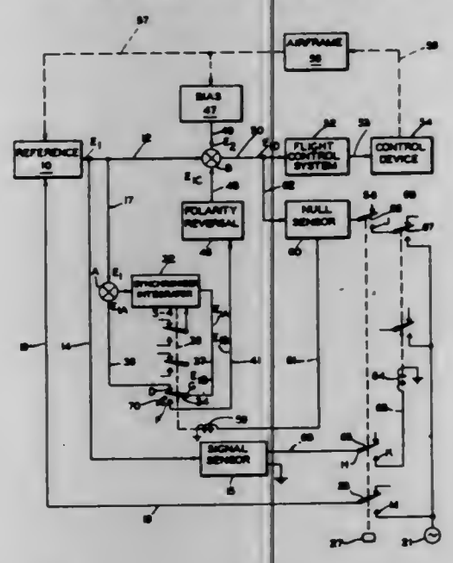
Filed Aug. 17, 1965, Ser. No. 480,383
5 Claims. (Cl. 317—258)



1. A thin-film capacitor comprising:
a thin-film electrode supported on a nonconductive substrate,
a dielectric film of beta tantalum oxide covering a selected area of the electrode, and
a counter electrode opposing the electrode and separated therefrom by the dielectric film.

3,275,916
HIGH Q POWER CAPACITOR

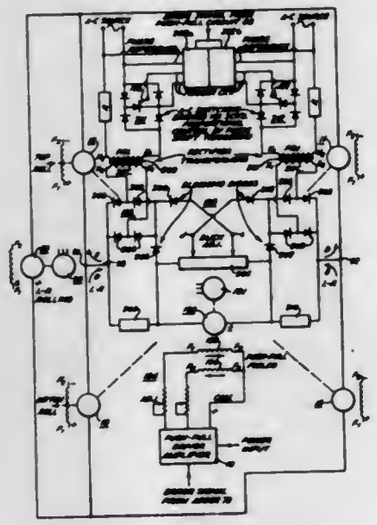
James A. Phillips and Alfred E. Schofield, Los Alamos, N. Mex., assignors to the United States of America as represented by the United States Atomic Energy Commission



Filed Feb. 15, 1960, Ser. No. 8,892
4 Claims. (Cl. 317—260)

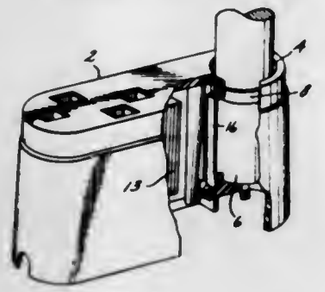
4. A capacitor comprising a plurality of alternating dielectric and metallic sheets, said metallic sheets each having a projecting tab extending from an edge thereof, said metallic sheets positioned in parallel aligned relation with the tabs of each adjacent pair of said metallic sheets aligned with one another and projecting in staggered relationship to tabs of adjacent pairs of metallic sheets, said

tabs all extending from a single side of said capacitor, solid dielectric means extending between said tabs of said pairs of metallic sheets and a single terminal transmission line connected to each of the tabs on one side of said dielectric means and a second single terminal transmission line connected to each of the tabs on the other side of said dielectric means.



3,275,917
RAPID CORRECTION MOTOR CONTROL SYSTEM OF STEADY STATE FLIGHT ERRORS
William W. Medlinski, Clifton, N.J., assignor to The Bendix Corporation, Teterboro, N.J., a corporation of Delaware
Filed Jan. 30, 1963, Ser. No. 255,008
9 Claims. (Cl. 318—18)

1. In a flight control system for a vehicle comprising in combination a first signal generating device for effecting a controlling signal in response to deviation of the vehicle from a first course reference, a second signal generating device for effecting a biasing signal in response to deviation of the vehicle from a second course reference, means for combining said first and second mentioned signals so as to provide a resultant differential signal, means responsive to said resultant differential signal for controlling a course of flight of the vehicle, a third signal generating device operative in response to a signal from said first-mentioned signal device, relay means operable in one sense to selectively connect the output signal from said third device in opposition to the biasing signal from said second device, means responsive to said resultant differential signal for operating said relay means in said one sense upon said differential signal decreasing to a null value, and means for locking said relay means in said one operating sense whereupon the signal applied through said relay means by the third device and in opcombining means a resultant signal for controlling the position to the biasing signal from said second device renders the first device effective to provide through said flight of the vehicle in accordance with said first course reference.



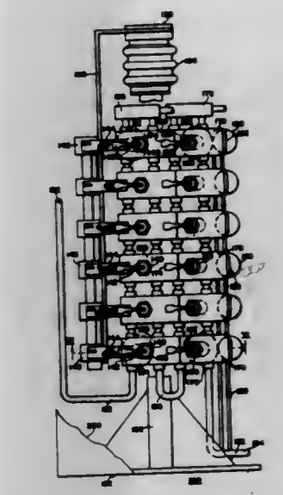
3,275,918
CONTROL SYSTEM FOR A PLURAL MOTOR DRIVE WITH LOAD EQUALIZATION
Louis H. Taylor, Youngstown, Ohio, assignor to The Youngstown Research and Development Company, Youngstown, Ohio, a corporation of Ohio
Filed Apr. 21, 1964, Ser. No. 361,418
10 Claims. (Cl. 318—99)

1. Electric apparatus comprising a first pair of electric motors at least one of which is drivingly connected to a first output shaft, a second pair of electric motors at least one of which is drivingly connected to a second output shaft, an armature of one of said first pair motors connected electrically in series with an armature of one of said second pair motors to form a first neutral point between said series connection, an armature of the other of said first pair motors connected electrically in series with an armature of the other of said second pair motors to form a second neutral point between said series connection, a neutral circuit between said first and second neutral points, said armature of said one of said first pair motors and said armature of said other of said second pair motors being connected to one side of a

source of electrical power which drives all said motors, said armature of said other of said first pair motors and said armature of said one of said second pair motors being connected to the other side of said source of electrical power, current producing means connected into said neutral circuit and producing a current which increases the armature current in one of the two pairs of motors and decreases the armature current in the other of the two pairs of motors to effect changes in apportionment of output torque between said two shafts, means connected to said current producing means for actuating same.

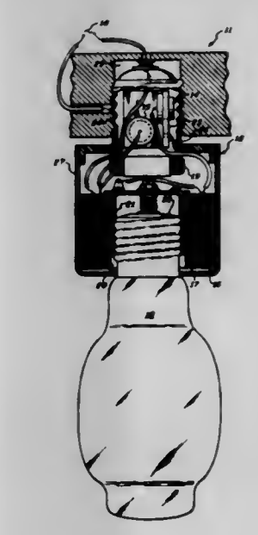
3,275,919
RECHARGER CONTACTS FOR ELECTRIC TOOTHBRUSH
George A. Decker, Wakefield, R.I., and Daniels B. Fisk, Framingham, Mass., assignors to General Electric Company, a corporation of New York
Filed Sept. 9, 1963, Ser. No. 307,634
3 Claims. (Cl. 320—2)

1. A storage case and battery charger for an electric toothbrush comprising:
(a) a housing having a socket formed therein for receiving a motorized toothbrush handle containing a rechargeable battery, said socket having a bottom wall and a side wall, said side wall having an aperture near the upper surface thereof,



(b) a first charging contact positioned within a first recess formed in said bottom wall for engaging a terminal located on one end of said handle,
(c) a second charging contact for engaging a terminal located on an outside surface of said handle, said second charging contact comprising a flat, electrically conductive, resilient, elongated member, a first end of said member being deformed to provide a projection thereon, said projection protruding inwardly through said side wall aperture, an ear being formed near the second end of said member, said ear being bent in the same direction as said projection to approximately conform to the shape of said side wall, and
(d) means for mounting said second charging contact on the outside surface of said side wall at a point adjacent said bottom wall, said mounting means including a recess on said outside surface for receiving said ear, the resiliency of said ear providing a wedged fit of said ear in said recess,
whereby said second charging contact is mounted on said surface by sliding said second charging contact upwardly causing said ear to fit within said recess, said member to be received by said groove and said projection to protrude inwardly through said aperture.

3,275,920
HIGH VOLTAGE SUPPLY CIRCUIT
Satoshi Shimada, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan, a corporation of Japan
Filed Oct. 29, 1962, Ser. No. 233,725
Claims priority, application Japan, Oct. 30, 1961, 36/54,256
4 Claims. (Cl. 321—8)



1. In a high voltage supply circuit,
a transformer having a primary winding and two secondary windings each having a pair of end terminals,
a rectifier connected between one terminal of one of said secondary windings and one terminal of the other of said secondary windings,
the other terminals of said windings being each connected to a respective side of a load, the product of the inductance and stray capacitance to ground of each of said secondary windings being thereby substantially less than the product of the inductance and strap capacitance of a winding having a number of turns equal to the total of the number of turns of said secondary windings, to increase the frequency range of operation and efficiency of the circuit.

3,275,921
SEMICONDUCTOR RECTIFIER ASSEMBLY
Frederick G. Fellendorf, Monroeville, and August P. Colaiaco, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Apr. 3, 1963, Ser. No. 270,332
9 Claims. (Cl. 321—8)

1. A rectifier assembly physically and electrically interchangeable with ignitron rectifier tubes comprising a base member, a first heat sink member having a plurality of semiconductor diodes mounted in thermal communication with said first heat sink member, said first heat sink member being mounted on and electrically connected to said base member, a second heat sink member disposed on said base member but electrically insulated therefrom having a plurality of semiconductor diodes mounted in thermal communication with said second heat sink member, the semiconductor diodes disposed on said second heat sink being electrically insulated from one another, coolant connections suitably disposed on said rectifier assembly for supplying coolant to said heat sink members, and an electrical terminal, the semiconductor diodes of said second heat sink member being connected in circuit relationship with said electrical terminal.

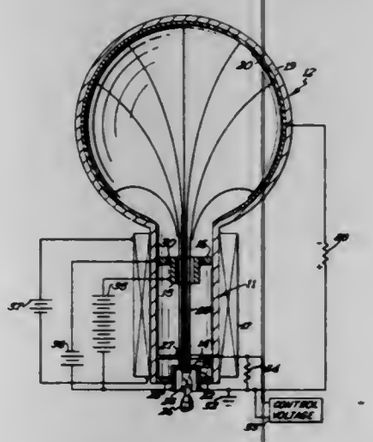
3,275,922
CONVERSION AND BALLAST UNIT
Kenneth I. Meyer, Middlebury, and Eugene Beck, Roxbury, Conn., assignors to Sperry Rand Corporation, Great Neck, N.Y., a corporation of Delaware
Filed Dec. 19, 1962, Ser. No. 245,813
5 Claims. (Cl. 321—15)

1. A conversion unit for lighting fixtures for increasing the peak output voltage and controlling the current therefrom comprising,
(1) voltage doubler circuit means having a pair of rectifying means and a pair of condensers connected

to terminals adapted to be energized by an alternating current source for providing voltage doubling rectification,

(2) said condensers being coaxially arranged one within the other, the innermost condenser having a coaxial aperture adapted to receive a socket,

(3) said voltage doubler circuit means further including current limiting means,



(4) a socket disposed within said aperture and adapted to receive a lamp,

(5) a base adapted to be received in said lighting fixture,

(6) said voltage doubling circuit means being connected to said base and said socket, and

(7) a housing means for enclosing said circuit means and to which said base is attached.

3,275,923
THERMIONIC CONVERTERS
Robert L. Laing, 3527 Aquila Ave. S., St. Louis Park, Minn., and Carol D. Feemster, 444 W. Duarte Road, Apt. E–3, Arcadia, Calif.
Filed June 8, 1965, Ser. No. 462,384
19 Claims. (Cl. 322—2)

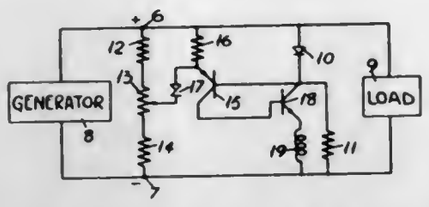
1. A thermionic converter for converting heat energy to electrical energy comprising

an enclosure including

means for producing a beam of electrons including a thermionic cathode, adapted to be heated by a source of heat,

means for accelerating said beam of electrons comprising an anode having an aperture therethrough,

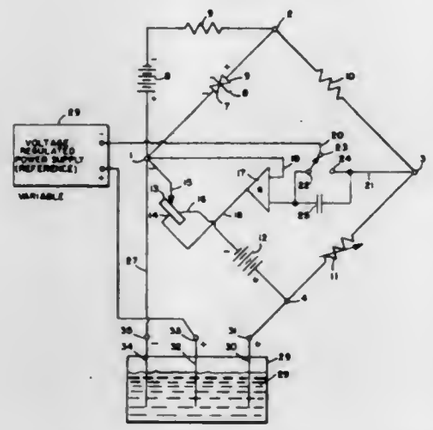
and a collector having a conductive surface within said enclosure,



a source of heat for heating said cathode and of a magnitude such that it constitutes the primary source of external energy applied to said converter,

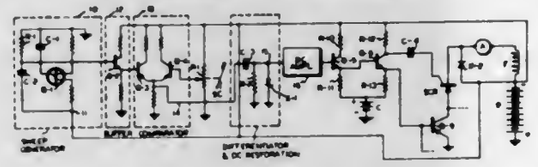
means for applying a positive voltage between said anode and said cathode to accelerate the passage of said electrons through the aperture in said anode to cause said electrons to engage the conductive surface of said collector,

and means operative to withdraw the electrical energy from said generator resulting from the heat applied to said cathode,



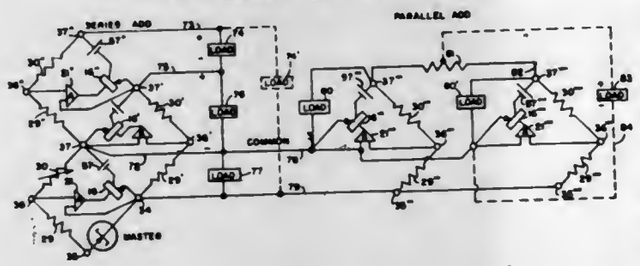
said means including a utilization circuit connected between said collector and said cathode to withdraw the energy from the collector due to the electrons engaging the conductive surface thereof, said utilization circuit being free of any external electrical source of power.

3,275,924
VOLTAGE REGULATORS
Derek Stanley Adams, Acocks Green, Birmingham, England, assignor to Joseph Lucas (Industries) Limited, Birmingham, England
Filed Apr. 5, 1963, Ser. No. 270,963
Claims priority, application Great Britain, Apr. 11, 1962, 13,942/62
7 Claims. (Cl. 322—28)



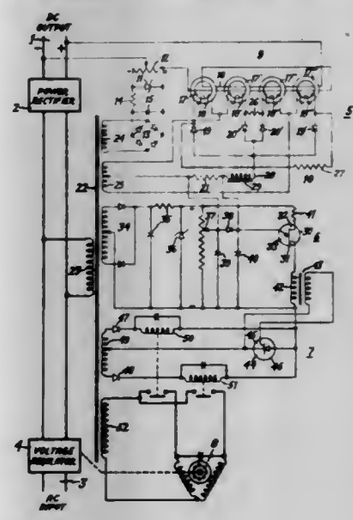
1. A voltage regulator for use with a D.C. generator having a field winding, comprising in combination first and second terminals for connection to said generator, a first transistor, a resistor through which the emitter of the first transistor is connected to the first terminal, a Zener diode through which the emitter of the first transistor is connected to the second terminal, a diode through which the base of the first transistor is connected to the first terminal. a second transistor of opposite conductivity type to the first transistor and having its emitter connected through said field winding of the generator to the second terminal, its base connected to the collector of the first transistor and its collector connected to the base of said first transistor, and a resistive path through which the collector of the second transistor is connected to the second terminal, said Zener diode becoming conductive when the output voltage of the generator exceeds a predetermined value and said second transistor switching between on and off states to regulate the output voltage of the generator.

3,275,925
ELECTROLYTIC CELL ANODE POTENTIAL CONTROL SYSTEM
Kenneth Kupferberg, Flushing, N.Y., assignor to Forbro Design Corp., New York, N.Y., a corporation of New York
Filed Sept. 7. 1962, Ser. No. 222,142
1 Claim. (Cl. 323—4)



In a system for controlling electrical conditions in an electrolyte, the combination of, an electrolyte through which the current is to be controlled, two main electrodes at least partially immersed in said electrolyte, a bridge circuit controlled voltage programmable regulated power supply including an error amplifier connected to supply programmed power to said electrodes, a sensing electrode at least partially immersed in said electrolyte, a series circuit including a source of reference voltage comprising the output of a variable output voltage regulated power supply, one of said main electrodes and said sensing electrode connected to said error amplifier for programming said regulated power supply to drive current between said main electrodes in accordance with the potential of said sensing electrode and the voltage from said variable output voltage regulated power supply whereby the power output of said programmable power supply is programmed to said main electrodes under control of said variable output power supply and the substantially zero current potential of said electrode.

3,275,926
DIRECT CURRENT CONTROL SYSTEMS
Shay J. Sheheen, Freeville, N.Y., assignor to The Raymond Corporation, Greene, N.Y., a corporation of New York
Filed Oct. 1, 1962, Ser. No. 227,270
7 Claims. (Cl. 323—18)

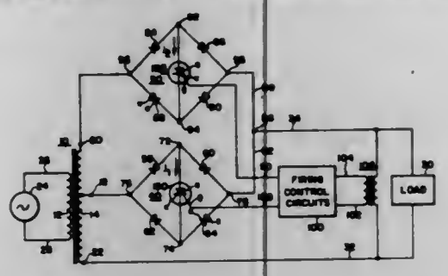


1. A direct current control circuit, comprising, in combination: a direct current source; a PNPN semiconductor controlled-rectifier having an anode, a cathode and a control electrode; a first transistor having a base electrode and collector and emitter terminals; a load circuit, said source, said load circuit, the anode-cathode circuit of said controlled rectifier, and the collector and emitter terminals of said transistor all being connected in a closed series loop; and means for providing substantially rectangular driving pulses periodically to said control electrode of said controlled-rectifier and to said base electrode of said transistor to cause said transistor and said controlled-rectifier to begin to conduct substantially simultaneously at the beginning of each driving pulse, and to interrupt current flow in said closed series loop at the end of each driving pulse.

3,275,927
BRIDGE CONTROLLED MULTIPLE REGULATED POWER SUPPLIES
Kenneth Kupferberg, Flushing, N.Y., assignor to Forbro Design Corp., New York, N.Y., a corporation of New York
Filed Mar. 15, 1962, Ser. No. 179,851
8 Claims. (Cl. 323—22)

8. A regulated current power supply system including in combination, a first regulated power supply utilizing a four element bridge circuit including at least a source of reference voltage, a fixed reference resistor, a variable output voltage control resistor, and a pair of output terminals including in parallel a source of controlled voltage, and a second regulated power supply utilizing a bridge circuit similar in recited components and their functions to the bridge circuit of said first regulated power supply, a current sensing resistor connected in series with the first said variable output voltage control resistor, and connections between said output terminals of said first regulated supply and the reference voltage arm of said second supply bridge whereby said second supply operates in a slave relationship to said first supply and to maintain regulated current through said current sensing resistor.

3,275,928
VOLTAGE REGULATOR WITH MAGNETIC AMPLIFIER ELEMENTS
Clarence J. Kettler, Stockbridge, Mass., assignor to General Electric Company, a corporation of New York
Filed June 4, 1963, Ser. No. 285,440
4 Claims. (Cl. 323—43.5)

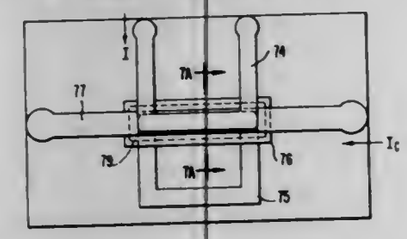


1. In combination, an alternating current supply circuit, a regulator in said circuit for controlling its output voltage, means for producing voltage pulses comprising a four-core saturable reactor having a common control winding on all of its cores and a separate gate winding on each of its cores, means for energizing said control winding with unidirectional current whose magnitude is proportional to the magnitude of deviations of the output voltage of said supply circuit from a predetermined normal value and whose direction is dependent on the direction of said deviations, means for deriving from a pair of said gate windings differential current produced unidirectional voltage pulses during positive half cycles of the voltage of said supply circuit of a polarity depending on the direction of current in said control winding, said control winding being so polarized with respect to said separate gate windings that said means produce oppositely polarized voltage pulses during their respective active half-cycles for a given polarity of differential control current, means for deriving from the other pair of gate windings differential current produced unidirectional voltage pulses during negative half cycles of the voltage of said supply circuit of a polarity depending on the direction of current in said control winding, and means responsive to said voltage pulses of a common polarity only for controlling the direction of operation of said regulator by a phase differential effect depending on whether said common polarity pulses occur during alternate positive or alternate negative half cycles of the voltage of said supply circuit.

3,275,929
ELECTRONIC LOAD TAP CHANGER SYSTEMS
Robert A. Schatz, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Filed June 12, 1963, Ser. No. 287,260
6 Claims. (Cl. 323—43.5)

1. A tap changer system comprising an alternating potential source, an alternating potential load, means in-

cluding an inductive winding having tap connections thereon connected in circuit relation with said alternating potential source and said alternating potential load, rectifier means connected in circuit relation with certain of said tap connections and said alternating potential load, and electrical valves connected in circuit relation with each of said rectifier means such that the polarity of



the potential applied to said electrical valve is the same during the positive and negative alternations of said alternating potential source, and means transferring the load current from an electrical valve associated with a tap connection of lower potential to an electrical valve associated with a tap connection of higher potential at any point in the positive and negative alternations of said alternating potential source.

3,275,930

SUPERCONDUCTING CONTROLLED INDUCTANCE CIRCUITS

Carl R. Cassidy, Hatboro, and Albert J. Meyerhoff, Wynnewood, Pa., assignors to Burroughs Corporation, Detroit, Mich., a corporation of Michigan

Filed Feb. 13, 1963, Ser. No. 258,268
16 Claims. (Cl. 323—44)

14. A superconducting circuit providing:

means for controlling the inductance of a continuously superconducing current path including;

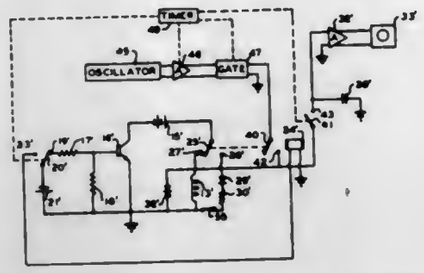
a continuously superconducting primary winding,

a continuously superconducting secondary winding,

at least a portion of said primary winding located adjacent at least a portion of said secondary winding,

a shield of superconducting material located between the adjacent portions of said primary and secondary windings, and

means for causing said superconducting shield to become resistive thereby enabling the adjacent portions of said primary and secondary winding to be flux linked.



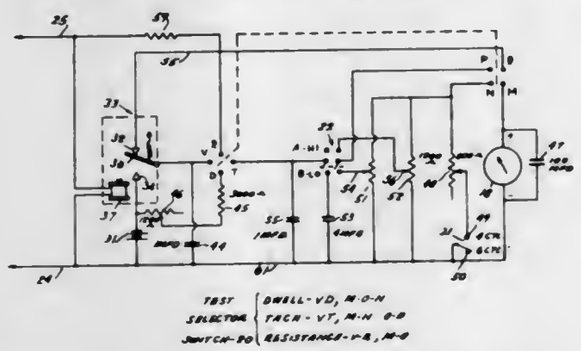
3,275,931

METHOD OF NUCLEAR MAGNETIC RESONANCE WELL LOGGING

Russell L. Collins, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Filed Sept. 10, 1962, Ser. No. 222,429
2 Claims. (Cl. 324—.5)

1. The method of well logging which comprises establishing a unidirectional magnetic field in an earth formation surrounding a well bore; permitting said magnetic field to decay; thereafter applying a second magnetic field to the earth formation, said second magnetic field being at substantially right angles with the magnetic field of the earth and alternating in direction at the Larmor frequency of nuclei of liquids in the formation under the magnetic field of the earth, the magnitude of said second magnetic field being such as to shift the moments of the precessing



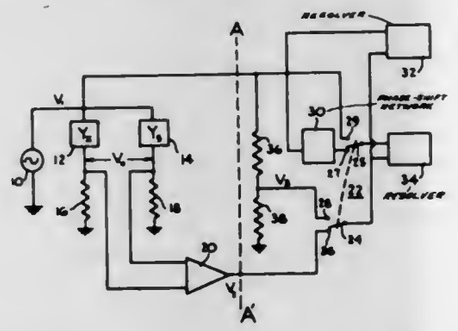
nuclei by 90°; thereafter applying a third magnetic field to the earth formation a plurality of times, said third magnetic field being identical to the second magnetic field except that the magnitude thereof is twice that of second magnetic field; and measuring the precession of the nuclei in the formation each time after the second magnetic field is removed.

3,275,932

R.P.M. DWELL ANGLE AND POINT RESISTANCE TESTER

Lee W. Parmater, Plainwell, Mich., assignor to Kal-Equip Company, Inc., Otsego, Mich., a corporation of Michigan

Continuation of abandoned application Ser. No. 52,131, Aug. 26, 1960. This application May 11, 1965, Ser. No. 458,819
12 Claims. (Cl. 324—16)



1. Apparatus for measuring dwell angle of breaker points in an ignition system having a source of electrical energy connected in circuit with such breaker points; said apparatus including a relay means, an indicator, a capacitor means, a local battery, an impedance element and test lead means connectable across breaker points under test; said relay means including a first normally closed and a second normally open contact section and an operating coil which when energized opens said first contact section and closes said second contact section; said test lead means connected to said coil for energization of the latter by a source of electrical energy external of said apparatus and in circuit with breaker points under test when such breaker points are open and said test lead means are connected thereacross; circuit means including a first circuit for discharging said capacitor means through said indicator when said coil is deenergized; said first circuit including said first contact section; said circuit means also including a second circuit for discharging said local battery through said indicator when said coil is deenergized; said second circuit including said impedance element and being exclusive of said capacitor means with simultaneous discharges from both said capacitor means and said local battery contributing significantly to control operation of said indicator; a portion of said circuit means, including said second contact section, connecting said capacitor means to charge from energy supplied by said local battery when said coil is energized.

3,275,933

SYSTEM FOR DETERMINING THE IMMITTANCE VECTOR WHICH IS THE DIFFERENCE BETWEEN AN UNKNOWN IMMITTANCE AND A KNOWN IMMITTANCE

Abraham I. Dranetz, Scotch Plains, N.J., assignor to Dranetz Engineering Laboratories, Inc., Plainfield, N.J., a corporation of New Jersey

Filed Nov. 4, 1964, Ser. No. 408,986
5 Claims. (Cl. 324—57)

1. A system for determining the value of an unknown immittance comprising:

a source of controlled A.-C. signal;

an unknown admittance, a known admittance, and a pair of resistors of equal value connected in a four terminal, four legged bridge wherein the known admittance is connected in the first leg, the unknown admittance is connected in the second leg, one of the pair of resistors is connected in the third leg, and the other of the pair of resistors is connected in the fourth leg;

each of the resistors having a conductance much greater than the admittance of each of the known admittance and the unknown admittance;

the controlled A.-C. signal being fed to the bridge across two opposite terminals, one of such terminals being the common junction of the two resistors, the other of such terminals being the common junction of the known admittance and the unknown admittance;

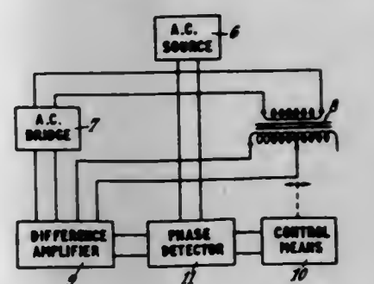
an A.-C. output signal being produced across the other two opposite terminals of the bridge;

a pair of resolvers, each having two inputs;

means connecting the terminals of the bridge across which the A.-C. output signal is produced to one of the inputs of each of the pair of resolvers;

means connecting the terminals of the bridge across which the source of controlled A.-C. signal is connected to the other input of the first of the pair of resolvers such that the output of the first resolver is proportional to the difference between the conductances of the unknown admittance and the known admittance;

a 90° phase shift network having an input and an output;



means connecting the source of controlled A.-C. signal to the input of the 90° phase shift network and means connecting the output of the 90° phase shift network to the other input of the second of the pair of resolvers such that the output of the second resolver is proportional to the difference between the susceptances of the unknown admittance and the known admittance.

3,275,934

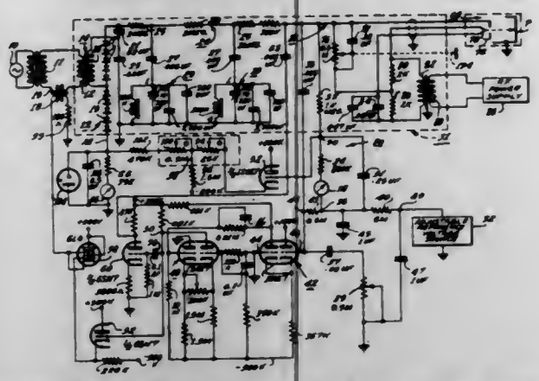
APPARATUS FOR MEASURING THE OUTPUT VOLTAGE OF AN ALTERNATING CURRENT BRIDGE BY COMPARISON WITH THE OUTPUT OF A VARIABLE TRANSFORMER

Frederick Herbert Laishley, Solihull, England, assignor to Joseph Lucas (Industries) Limited, Birmingham, England

Filed Feb. 15, 1963, Ser. No. 258,748
Claims priority, application Great Britain, Feb. 28, 1962, 7,766/62
1 Claim. (Cl. 324—99)

Apparatus for measuring the output voltage of an A.C. bridge, comprising in combination a transformer the primary winding of which is connected in use to an A.C. voltage in phase with that supplied to the bridge, said transformer including a plurality of unequal secondary windings each divided into a plurality of equal parts, a uniselector including a plurality of contact pieces and a contact arm movable step by step over said contact pieces, means connecting said contact pieces with the parts of the largest of said secondary windings, a difference amplifier connected to the bridge and to said uniselector so as to receive the output voltage of the bridge and a proportion of the output voltage of the transformer, the difference amplifier producing an A.C. output the phase of which is dependent on which of the voltages applied to the difference amplifier is greater in amplitude, means for operating the uniselector to connect the parts of said largest windings step by step to said amplifier, a phase detector connected to the amplifier so as to produce a direct current output of polarity dependent upon the phase of the output from the amplifier, means operable when the polarity of the phase detector changes for stopping the uniselector and by-passing one part of said largest winding, and a control circuit for successively energising further uniselectors connected to said amplifier and associated with the other secondary windings respectively, and operating them in the same way as the first-mentioned uniselector, so that the final position of the uniselector arms indicates the output voltage from the bridge.

3,275,935



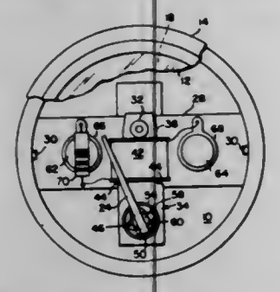
H.V. POWER SUPPLY AND MEASURING SYSTEMS INCLUDING A SUPPLY REGULATION SYSTEM HAVING TWO FEEDBACK PATHS AND RESPONSIVE TO HIGH AND LOW FREQUENCY OUTPUT VARIATIONS

Louis Shapiro, Erlton, N.J., assignor, by mesne assignments, to The First Pennsylvania Banking and Trust Company, as trustee

Filed June 11, 1962, Ser. No. 201,697
18 Claims. (Cl. 324—123)

5. A high voltage electronic system comprising a high voltage power supply including a high voltage terminal, means for varying the power applied to said power supply, and regulating means including a negative feedback circuit connected to said high voltage terminal, said feedback circuit including means providing a reference voltage, amplifying means responsive to the voltage at said terminal and said reference voltage for producing error voltages at its output, and a first feedback path, connected from the output of said amplifying means to said

power varying means for controlling said power varying means in response to low frequency changes in voltage at said terminal, said feedback circuit further including



a second feedback path connected from the output of said amplifying means to said terminal for varying the voltage at said terminal in response to high frequency changes in voltage thereat.

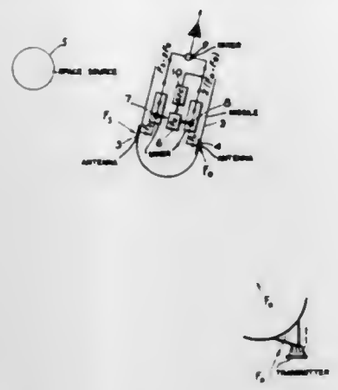
3,275,936

ELECTRIC METER INCLUDING PIVOTED MAGNET ROTOR SURROUNDED BY CONTINUOUS POLE FACES

William D. Huston, Rochester, N.Y., assignor to American Radiator & Standard Sanitary Corporation, New York, N.Y., a corporation of Delaware

Filed May 4, 1962, Ser. No. 192,452
3 Claims. (Cl. 324—146)

1. An electrical meter comprising
(a) a generally U-shaped core comprising a single sheet of thin, soft magnetic material,
(b) an electric coil mounted on one leg of said core for producing magnetic flux therein upon energization of said coil,
(c) said core having a circular aperture in one leg with a continuous circular wall, said aperture extending across the major part of the width of the core whereby two magnetically saturable portions of the core are disposed at either side of the aperture,
(d) a permanent magnet, means pivoting said permanent magnet in said aperture, said magnet being polarized in the plane of said aperture, and
(e) means for biasing said magnet toward a preselected angular position relative to said core,
and means for adjusting the reluctance of said core for calibrating said meter.



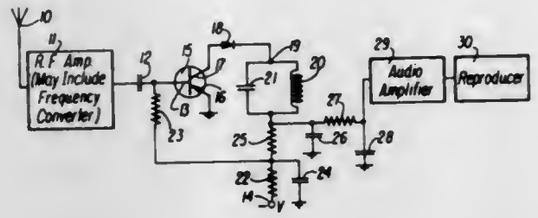
3,275,937

STABILIZED RECEIVERS FOR SPACE VEHICLES

Raymond Rocherolles and Michel Bellenger, both of Paris, France, assignors to C.S.F.-Compagnie Generale de Telegraphie Sans Fil, a corporation of France

Filed Mar. 14, 1962, Ser. No. 179,672
Claims priority, application France, Mar. 20, 1961, 856,104
3 Claims. (Cl. 325—15)

1. A receiver for ultra-high frequency energy, adapted to be placed on a space vehicle, comprising: means for receiving from ground ultra-high frequency energy having a stabilized frequency F_o; means for receiving ultra-high frequency energy from a spatial source; a first, a second and a third mixer; a local oscillator having a frequency control input; an automatic frequency control, controlled by said stabilized frequency energy, and having an output connected to said frequency control input of



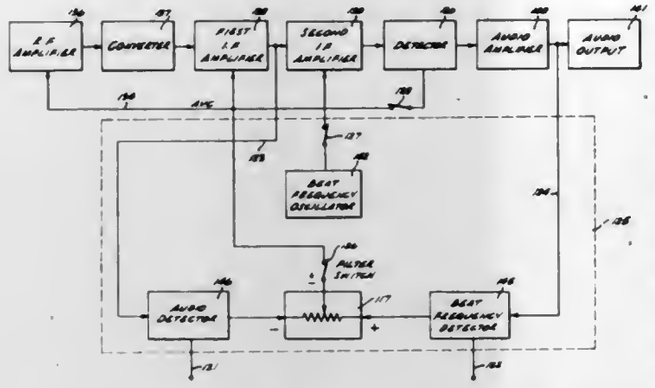
said oscillator, said first and said second mixer being connected to said oscillator and having means for receiving respectively the wave energy incoming from said spatial source and said stabilized frequency energy for generating respective beats; and said third mixer for mixing said respective beats thus eliminating the frequency of said local oscillator and having an output for delivering the resulting beats.

3,275,938

FREQUENCY MODULATION CIRCUIT

Richard D. Carsello, Chicago, and David L. Gunn, Lombard, Ill., assignors to Motorola, Inc., Chicago, Ill., a corporation of Illinois

Filed Jan. 7, 1963, Ser. No. 249,847
6 Claims. (Cl. 325—349)



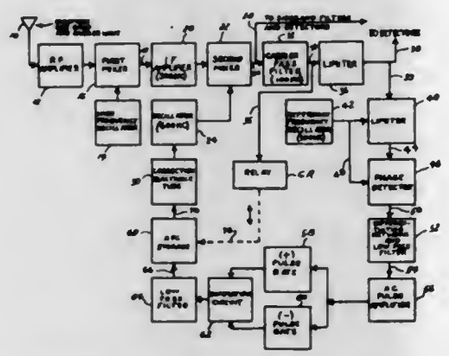
1. A frequency modulation detector circuit for deriving the modulation signal from a frequency modulated carrier wave having a predetermined center frequency, said circuit including in combination, a transistor having a control electrode and output electrodes, input circuit means connected to said control electrode for applying the modulated wave thereto, and a series circuit including a parallel resonant circuit and rectifier means connecting said resonant circuit to said output electrodes, said series circuit further including impedance means, said parallel resonant circuit being tuned to a frequency above the predetermined center frequency of the modulated wave to be detected, said rectifier means being poled to conduct current in the series circuit of the same polarity which is conducted by said output electrodes to provide current flow through said impedance means, and output circuit means connected to said impedance means for deriving the modulation signal.

3,275,939

NOISE MODULATION CONTROL SYSTEM

Sanford B. Luftig, Wichita, Kans., assignor of thirty-seven and one-half percent to The Wheeler Kelly & Hagny Investment Company, Wichita, Kans., and ten and one-half percent to Walter P. Innes, Jr., and nine percent each to Walter P. Innes III, William D. Innes, and Betty S. Innes, all of Eastborough, Kans.

Filed May 17, 1962, Ser. No. 195,493
15 Claims. (Cl. 325—399)



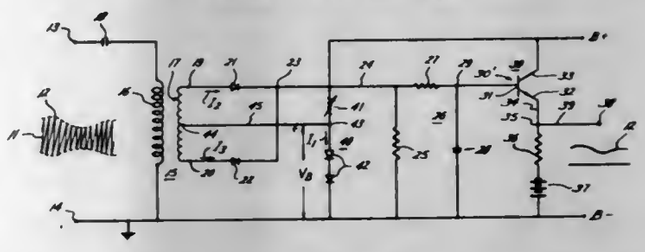
12. In a receiver adapted for reception of combined signals and undesired noise components, said receiver comprising amplification stages for amplifying said signals and noise components:
a comparator coupled to selected different ones of said amplifier stages and having an output,
a fixed frequency oscillator providing a fixed frequency signal and coupled to one of said receiver amplifier stages intermediate said different ones of said amplifier stages, said comparator output representing a comparison of said signals and said noise components and a combination of said signals and noise components and said fixed frequency signal, and
means coupled to said receiver for controlling amplification of said receiver amplifier stages in accordance with said output of said comparator.

3,275,940

AUTOMATIC FREQUENCY CONTROL MEANS FOR SINGLE-SIDEBAND RECEIVERS AND THE LIKE

Leonard R. Kahn, 81 S. Bergen Place, Freeport, N.Y.

Filed May 28, 1963, Ser. No. 283,740
8 Claims. (Cl. 325—423)



6. In radiant energy receiving equipment subject to occasional fading of the received signal and having a local oscillator establishing a predetermined IF frequency for the equipment, automatic frequency control means comprising means selecting and isolating a sample of a signal carrier component frequency, means generating a stable reference frequency, means comparing said carrier component frequency and said reference frequency and developing a correction signal related to the frequency difference between said carrier component frequency and said stable reference frequency, correction signal storage means to which said correction signal is fed during periods when the incoming carrier level is greater than a predetermined value and from which a stored correction signal is available to maintain said IF frequency substantially constant for a substantial period when the incoming carrier level is less than said predetermined value, and reaction oscillator means responsive to said correction signal for varying said local oscillator in a manner maintaining said IF frequency substantially constant, said correction signal storage means comprising a voltage divider network including a first capacitance charged by said correction signal to a value somewhat less than the voltage of the correction signal, said signal storage circuit further comprising a second capacitance charged by said correction voltage to substantially the full value of said correction voltage, said storage circuit further comprising switch means operated in response to the incoming carrier level to apply the voltage across said first capacitance to said correction reactance means when said incoming carrier level is above a predetermined value, and operable to apply the voltage across said second capacitance to said correction reactance means during a period when said incoming carrier level is less than a predetermined value.

3,275,941

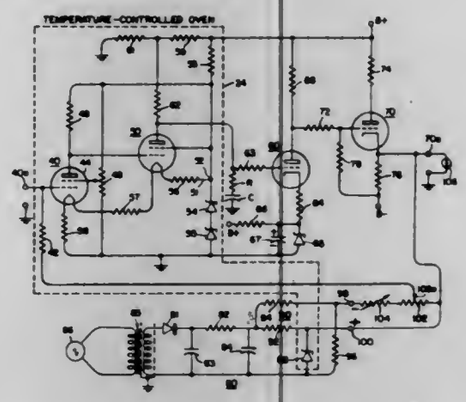
A.C. TO D.C. CONVERTERS

George E. Brechling, Levittown, Pa., assignor to Electro-Mechanical Research, Inc., Sarasota, Fla., a corporation of Connecticut

Filed Mar. 27, 1961, Ser. No. 98,409
3 Claims. (Cl. 329—101)

1. In a wide-range amplitude detector, the combination comprising: a first, second and third semiconductor elements each having a forward operating range wherein its resistance is relatively high below a characteristic threshold voltage level thereacross and is relatively low above said threshold level; a transformer having a primary winding and a center-tapped secondary winding, means connecting said first and said second elements in oppositely poled directions across said secondary winding a current-limiting impedance connected to said first and second elements, and means connecting said third element and said impedance in series across a direct current source for establishing a forward bias voltage across said third element, means to apply said bias voltage to forward bias said first and said second elements, and means coupled with said first and said second elements for deriving a direct current signal which varies as a function of the amplitude modulations on an alternating current signal applied to said primary winding.

3,275,942



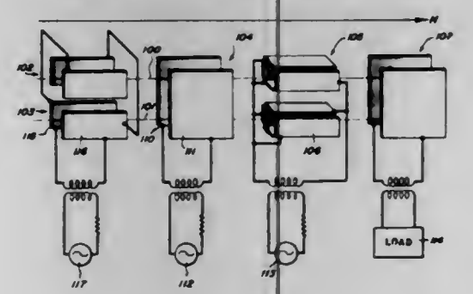
THERMAL STABILIZATION OF DIRECT-COUPLED ELECTROMETER AMPLIFIERS

Ko-Hsin Liu, Hilliard, Ohio, assignor to Industrial Nucleonics Corporation, a corporation of Ohio

Filed Mar. 27, 1963, Ser. No. 268,318
11 Claims. (Cl. 330—1)

4. An electrometer amplifier comprising an input stage, an output stage, and a degenerative feedback loop connecting said output stage to said input stage, a source of operating voltage, first regulator means including a first

temperature-compensated zener diode connected to said operating voltage source, a source of bucking voltage, second regulator means including a second temperature-compensated zener diode connected across said bucking voltage source; means for enclosing said amplifier input stage and said first and second zener diodes in a temperature-controlled environment, said enclosing means including an oven, means for heating the interior of said oven, sensing means communicating with the interior of said



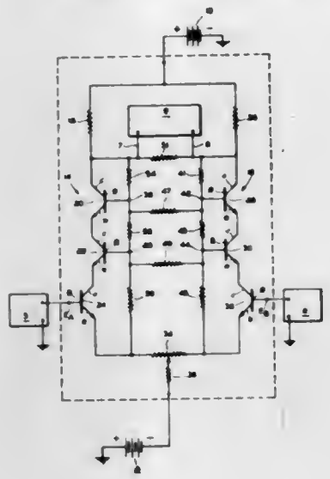
oven for generating a signal proportional to the temperature of said oven interior, controller means responsive to said generated signal for energizing said heating means when ever said interior temperature is less than a desired value therefor; means for connecting the constant voltage thereupon developed by said first regulator to supply an operating voltage to said amplifier input stage, and means for connecting an adjustable portion of the constant voltage developed by said second regulator in series with said feedback loop.

3,275,943

DUAL OUTPUT CHANNEL ELECTRON BEAM PARAMETRIC AMPLIFIER WITH NOISE ELIMINATION

Robert Adler, Northfield, Ill., assignor to Zenith Radio Corporation, a corporation of Delaware

Filed Apr. 10, 1959, Ser. No. 805,530
4 Claims. (Cl. 330—4.7)



1. An amplifying system comprising: means for projecting a pair of electron beams individually along adjacent predetermined paths; means, including an electron coupler disposed adjacent and in common to said paths, for coupling signal energy in parallel to said beams; means, including a pair of reversely interconnected electron couplers individually disposed adjacent respective ones of said paths, for coupling signal energy to said beams in push-pull; means for terminating one of said coupling means in a noise sink tuned to a frequency ω_2; means for applying input signal energy of a frequency ω_1 to the other of said coupling means; means for impressing pumping signal energy of a frequency ω_3 equal to ω_1 plus ω_2 upon each of said beams but with mutually opposite phase relationship; and means coupled to said beams for deriving amplified input signal energy therefrom.

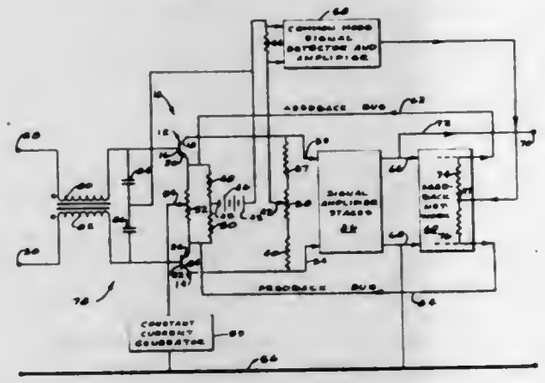
3,275,944

HIGH VOLTAGE D.C. COUPLED DIFFERENTIAL AMPLIFIER INCLUDING SERIES ENERGIZED TRANSISTORS

Thomas J. Lavin, Midland Park, N.J., assignor to The Bendix Corporation, Teterboro, N.J., a corporation of Delaware

Filed Nov. 26, 1963, Ser. No. 326,081
5 Claims. (Cl. 330—18)

1. A circuit arrangement comprising a plurality of transistors each having emitter, base and collector electrodes,
a first and second transistor of said plurality arranged in differential amplifier connection,
the remaining transistors of said plurality being evenly divided into first and second groups in combination with said first and second transistors,
input terminals for supplying differential electrical input signals to the bases of said first and second transistors,
a supply source of electrical energy,
a first resistor in series with said supply source,
one terminal of the series combination of said first resistor and said supply source being connected to the collector of the last transistor of the remaining of said plurality of transistors in said first group,
a second resistor in series with said supply source,
one terminal of the series combination of said second resistor and supply source being connected to the collector of the last transistor of the remaining of said plurality of transistors in said second group,
circuit means providing a direct current series connection from the collector of said first transistor across the emitter-collector paths of the remaining of said plurality of transistors in said first group to said one terminal of the series combination of said first resistor and supply source,
circuit means providing a direct current series connection from the collector of said second transistor across the emitter collector paths of the remaining of said plurality of transistors in said second group to said one terminal of the series combination of said second resistor and supply source,
the other terminal of said supply source being connected to the emitter of said first and second transistors,
a first voltage divider connected from the emitter of said first transistor to the collector of the last transistor of the remaining of said plurality of transistors in said first group,
circuit means connecting each of the base electrodes of the remaining of said transistors of said plurality of transistors in said first group to separate points on said first voltage divider,



a second voltage divider connected from the emitter of said second transistor to the collector of the last transistor of the remaining of said plurality of transistors in said second group,
circuit means connecting each of the base electrodes of the remaining of said transistors of said plurality of transistors in said second group to separate points on said second voltage divider,
a load resistor connected from the collector of the last transistor of the remaining of said plurality of transistors in said first group to the collector of the last transistor of the remaining of said plurality of transistors in said second group,
electrical output lines leading from opposite ends of the load resistor,
resistance means connecting the separate points on said first voltage divider to the associated separate points on the second voltage divider whereby the base current of the associated pairs of transistors remains constant, thus maintaining an equal voltage division across the series connected transistors.

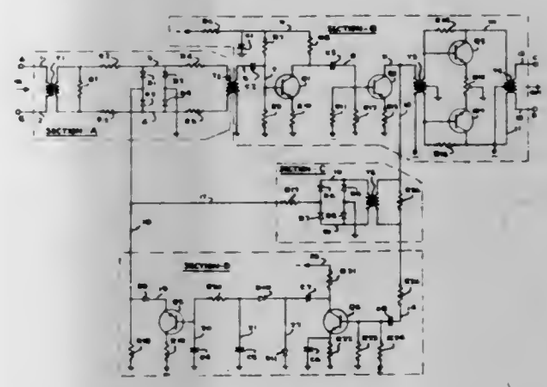
3,275,945

DIRECT COUPLED DIFFERENTIAL AMPLIFIER WITH COMMON MODE REJECTION

Norman C. Walker, Newport Beach, and Charles E. Engle, Tustin, Calif., assignors to Dana Laboratories, Inc., Santa Ana, Calif., a corporation of California

Filed June 4, 1963, Ser. No. 285,422
8 Claims. (Cl. 330—30)

1. A direct coupled differential amplifier having a pair of amplifier input terminals and a common bus and comprising: a dual transistor input stage including two substantially symmetrically intercoupled transistors each having an input electrode coupled to a respective one of said amplifier input terminals and being of the character sensitive to differential signals on said amplifier input terminals for providing output signals representative thereof; a common mode signal detector and amplifier coupled to said input stage and being responsive to common mode signals on said input terminals to generate a negative feedback signal and to impress it upon a circuit point intercoupled electrically between and equidistant from a like electrode of each of said transistors; an inductive winding intercoupled between each said input electrode of said dual transistors and a respective one of said input terminals; and a filter capacitor intercoupled between each of said inductive windings and said circuit point.



3,275,946

SELF-REGULATING COMPRESSION AMPLIFIER

Donald C. Beatty, 2800 Overhill Road, Birmingham, Ala.

Filed Nov. 6, 1963, Ser. No. 321,783
7 Claims. (Cl. 330—141)

7. For connection in a four-wire communications circuit of the type having a separate pair of conductors for the transmission of signals in each direction, apparatus to sense, at the location of the installation of the apparatus in the circuit, variations of a transmitted signal from a pre-selected magnitude and to restore the signal automatically to said magnitude for transmission beyond said location, comprising:
(a) an input section including
(1) a pair of leads connectable at one end to one of said pairs of conductors of said circuit to provide an input terminus,
(2) a first transformer connected between said leads,
(3) a second transformer connected between said leads at the other ends thereof,
(4) a first resistor connected in shunt across said leads at a location between the transformers,
(5) a pair of second resistors connected in series in each of said leads at a location between said shunt and the second transformer,
(6) a pair of first and a pair of second rectifiers connected in shunt across said leads at a location between the series-connected resistors, the first rectifiers having their negative terminals connected to the respective leads and the second rectifiers having their positive terminals connected to the respective leads, and
(7) a connection extending to ground from a location between the second rectifiers;

(b) a main amplifying section including
(1) an output terminus connectable to said pair of conductors of the communication circuit for further transmission of a signal received by the apparatus and restored thereby to the pre-selected magnitude,
(2) a signal transmission line connected between the second transformer and said output terminus, and
(3) amplification means connected in said signal transmission line and arranged to amplify a signal passing therethrough to a given magnitude in ratio to the magnitude of said signal when passed into the main amplifying section from the input section;
(c) a signal-retard section including
(1) a pair of second leads,
(2) a pair of third and a pair of fourth rectifiers connected in shunt across said second leads, the third rectifiers having their negative terminals connected to one end of the respective second leads and the fourth rectifiers having their positive terminals connected to the respective second leads,
(3) a connection extending to ground from a location between the fourth rectifiers,
(4) a third lead connected at one end to the positive terminals of the third rectifiers,
(5) a third resistor series-connected in the third lead,

(6) a fourth resistor connected between the other ends of the second leads, and

(7) a third transformer connected between the second leads at a location between said other ends of the second leads and the shunt of the fourth rectifiers thereacross; and

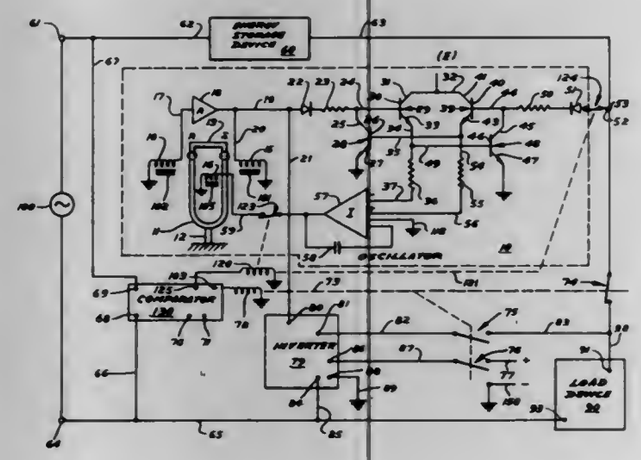
(d) an impedance control section including

(1) a second signal transmission line having input and output ends,

(2) amplifying means connected in said second line and arranged to amplify a signal passing therethrough to a given magnitude at the output end of the second line in ratio to the magnitude of said signal when passed into the input end of the second line,

(3) a fourth lead connected between the first signal transmission line and the input end of the second signal transmission line, a portion of the fourth lead having the fourth resistor series-connected therein and constituting the connection of the fourth resistor across the second leads,

(4) a fifth rectifier series-connected in the second signal transmission line at the output end thereof for rectifying current amplified within the impedance control section to direct current, and



(5) a fifth lead connected between the fifth rectifier and the positive terminals of the first rectifiers, the third lead being connected at its other end to the fifth lead intermediate the ends of the fifth lead.

3,275,947

FREQUENCY CONTROLLED TUNING FORK OSCILLATOR

Robert L. Baker, Spring Lake Park, Minn. (8191 Spring Lake Park Road, Minneapolis, Minn. 55432)

Filed Dec. 9, 1963, Ser. No. 329,091
6 Claims. (Cl. 331—27)

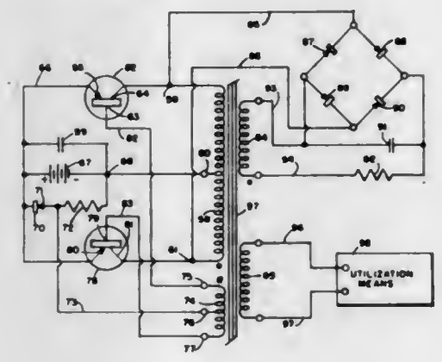
1. Apparatus for controlling the frequency of a tuning fork comprising in combination;

(a) a tuning fork

(b) a first source of magnetic energy mounted in magnetic energy transferring relationship to said tuning fork

(c) input and output means magnetically associated with said fork, said input and output means being interconnected by amplifying means

(d) an alternating reference potential and



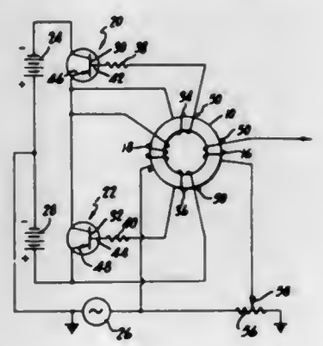
(e) means responsive to variations in frequency synchronism between said alternating reference potential and said output means for controlling the magnitude of magnetic energy transferred to said tuning fork.

3,275,948

INVERTER WITH D.C. FREQUENCY CONTROL

Franklin Rosenbusch, Lake Hiawatha, N.J., assignor to Forbro Design Corp., New York, N.Y., a corporation of New York

Filed Mar. 9, 1964, Ser. No. 350,243
4 Claims. (Cl. 331—113)



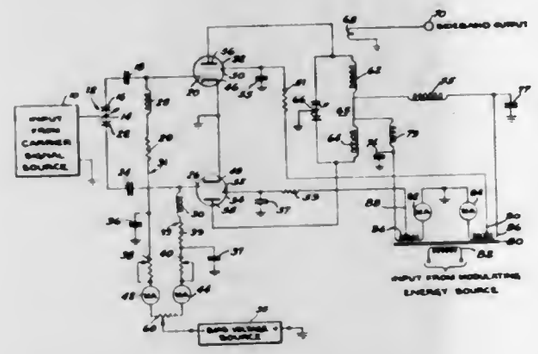
1. In a direct current to alternating current inverter, the combination of, a saturable core, a source of direct current, a main winding on said core, a feed-back winding on said core, a pair of transistors connected to couple said source of direct current with said windings adapted to provide an oscillating circuit, a third winding coupled to said core for providing an output alternating current to utilization means, a fourth winding on said core, rectifying means and current control means connected to said main winding and adapted to supply a controlled direct current to said fourth winding for stabilizing the frequency of said oscillating circuit.

3,275,949

SATURABLE CORE PULSE WIDTH MODULATOR

Keith O. Johnson, Los Angeles, Calif., assignor to Ampex Corporation, Redwood City, Calif., a corporation of California

Filed Feb. 19, 1964, Ser. No. 345,962
2 Claims. (Cl. 332—12)



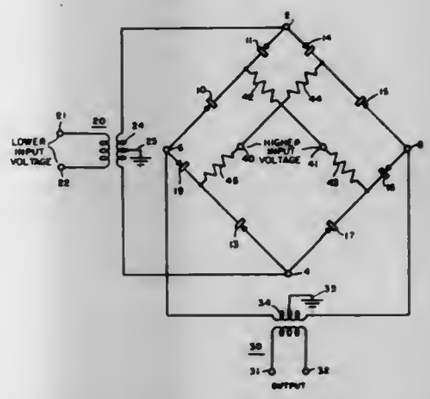
1. A pulse width modulator comprising a bistable magnetic core capable of assuming two states of magnetic saturation, said core including a single input winding, a first control winding, a second control winding, a source of positive D.-C. voltage, a source of negative D.-C. voltage, said first control winding responsive to the change of said core from one state of saturation to the other state of saturation for generating a first control signal, said second control winding responsive to the change of said core from said other state of saturation to said one state of saturation for generating a second control signal, a first transistor switch including a base, an emitter, and a collector, said base being connected to said first control winding for rendering said first transistor conductive in response to said first control signal, said emitter being connected to a junction between said single input winding and said first control winding, said collector being connected to said positive source; said first transistor when conductive applying a first signal to said single input winding, second transistor switch including a second base, a second emitter and a second collector, said second base being connected to said second control winding for rendering said second transistor conductive in response to said second control signal, said second emitter being connected to a junction between said negative source and said second control winding, said second collector being connected to the junction between said single input winding and said first control winding and thus to said first emitter, said second transistor when conductive applying a second signal complementary to said first signal to said single input winding, said core changing from said one state of saturation to said other state of saturation at a rate which is a function of the amplitude of said first signal, said core changing from said other state of saturation to said first state of saturation at a rate which is a function of the amplitude of said second signal, said junction between the single input winding and the first control winding providing an output which is responsive to each change of state of said core for generating an output pulse, whereby an output pulse is provided the width of which is a function of the rate of each change and wherein the amplitude modulator of the output pulse is eliminated.

3,275,950

DOUBLE SIDEBAND SUPPRESSED CARRIER BALANCED MODULATOR CIRCUIT

Edmund E. Birr, Lombard, Ill., assignor to Televiso Electronics, Division of Doughboy Industries, Inc., Wheeling, Ill., a corporation of Wisconsin

Filed Apr. 29, 1963, Ser. No. 276,289
5 Claims. (Cl. 332—43)



1. An improved balanced modulator circuit comprising in combination two vacuum tubes each having an anode, a cathode and a control grid, a resonant circuit tuned to R.F. signal energy, a modulating signal energy source, the anodes being connected in push-pull configuration to the resonant circuit, the anodes being biased from the modulating energy source through the resonant circuit, the cathodes being connected to ground potential, an R.F. signal energy input terminal for applying R.F. signal energy, the control grids being connected in parallel to the R.F. signal energy input terminal; D.C. bias voltage means, and parallel separate connection means between the control grids and the D.C. bias voltage means, whereby the voltage excursions of the control grids of the individual tubes induced by the anode voltage excursions of the respective tubes are limited only by the impedance of the grid circuit associated with the individual tube.

3,275,951

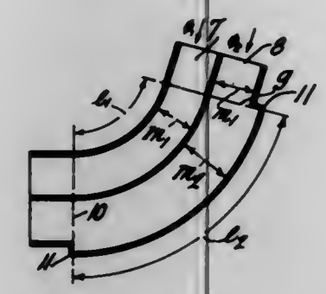
RING MODULATOR WITH LARGE DYNAMIC OPERATING RANGE

Joachim A. Maass, Wall Township, Monmouth County, N.J., assignor to the United States of America as represented by the Secretary of the Army

Filed Aug. 1, 1963, Ser. No. 299,438
1 Claim. (Cl. 332—43)

A ring modulator comprising eight similar diodes, each having anode and cathode electrodes the cathodes of a first and second of said diodes being connected together, the cathodes of a third and fourth of said diodes being connected together, the cathodes of a fifth and sixth of said diodes being connected together, and the cathodes of a seventh and eighth of said diodes being connected together; a first transformer having a primary winding and a secondary winding with a grounded center tap, one end of said secondary winding being connected to the anodes of said first and eighth diodes the other end of said secondary winding being connected to the anodes of said fourth and fifth diodes; a second transformer having a primary winding with a grounded center and a secondary winding, one end of said primary winding being connected to the anodes of said second and third diodes and the other end of said primary winding being connected to the anodes of said sixth and said seventh diodes; a first and second resistors connected in series between the cathodes of said first and second diodes and the cathodes of said fifth and sixth diodes; a third and fourth resistors connected in series between the cathodes of said third and fourth diodes and the cathodes of said seventh and eighth diodes; a first source of input signals connected across the primary winding of said first transformer; a second source of input signals connected between the junction of said first and second resistors and the junction of said third and fourth resistors, the voltage level of said second source of input signals being higher than the voltage level of said first source of input signals; and an output load connected across the secondary winding of said second transformer.

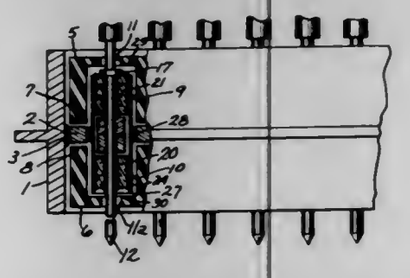
3,275,952



MICROWAVE PHASE SHIFTER SYSTEM PROVIDING SUBSTANTIAL CONSTANT PHASE SHIFT OVER BROAD BAND

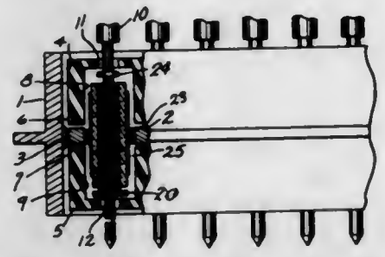
Nathaniel I. Korman, Merchantville, N.J., assignor to Radio Corporation of America, a corporation of Delaware

Filed May 29, 1950, Ser. No. 165,016
6 Claims. (Cl. 333—31)



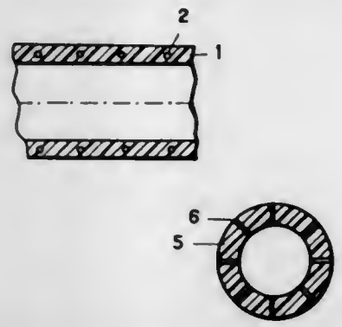
1. A microwave phase shifter providing a substantially constant phase shift over a wide frequency band comprising: a pair of waveguides of different lengths, one of said waveguides having a different cut-off wave length from that of the other, the product of the waveguide length and the wavelength in the waveguide at the mean operating

frequency for one waveguide being equal to that product for the other, and means to apply radio wave energy at



the operating frequency of predetermined relative phase relationship respectively at the ends of the two waveguides.

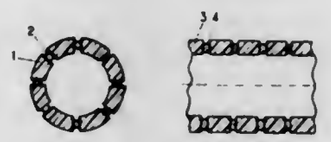
3,275,953
MULTIPLE PIN CONNECTOR HAVING FERRITE BEAD-CAPACITOR FILTER
Nello Coda, Erie, Pa., and James J. Walsh, Trenton, Ontario, Canada, assignors to Erie Technological Products, Inc., a corporation of Pennsylvania
Filed Aug. 20, 1963, Ser. No. 306,407
4 Claims. (Cl. 333—79)



1. A connector having a ground plate with a plurality of openings extending through the plate, a pair of blocks of insulating material respectively on one and on the opposite side of the ground plate, each block having a plurality of sockets with each socket in one block being aligned with an associated socket in the other block and with the open end of each socket adjacent and aligned with one of said openings and with the bottom of each socket spaced axially from the opening with which it is aligned and providing a thrust receiving shoulder, a plurality of filter assemblies each comprising an outer metal tube extending through an opening in the ground plate with one end presented to the shoulder at the bottom of one socket and the other end presented to the shoulder at the bottom of the associated socket, a center conductor pin extending through the tube and through the bottoms of the associated sockets, a ceramic capacitor telescoped over the pin with a major portion telescoped within the tube and having an outwardly projecting flange adjacent the shoulder and overlapping one end of the tube, an inner electrode extending out over the end of the flange and soldered to the pin, and an outer electrode soldered to the tube, another tubular capacitor telescoped over the pin and axially spaced from the first capacitor with a major portion telescoped within the tube and having an outwardly projecting flange overlapping the other end of the tube, an inner electrode extending out over the end of the flange and soldered to the shoulder, and an outer electrode soldered to the tube, ferrite beads on the pin between the capacitors, and means for connecting the outer electrode to the ground plate.

3,275,954
MULTIPLE CONNECTOR WHEREIN PINS HAVE LIMITED MOVEMENT WITHIN HOUSING AND EACH PIN HAS INTEGRAL LOW-PASS FILTER
Nello Coda, Erie, Pa., and James J. Walsh, Trenton, Ontario, Canada, assignors to Erie Technological Products, Inc., a corporation of Pennsylvania
Filed Aug. 20, 1963, Ser. No. 306,406
9 Claims. (Cl. 333—79)

1. A connector having a ground plate with a plurality of openings extending through the plate, a pair of blocks of insulating material respectively on one and on the opposite side of the ground plate, each block having a plurality of sockets with each socket in one block being aligned with an associated socket in the other block and with the open end of each socket adjacent and aligned with one of said openings and with the bottom of each socket spaced axially from the opening with which it is aligned, a pin extending through each opening and through the bottoms of the associated sockets, a shoulder on the pin within each socket and in thrust relation to the bottom of the socket, a filter assembly on each pin comprising ferrite beads on the pin between the shoulders, tubular ceramic capacitor means telescoped over the pin between the shoulders and extending through each opening and having inner electrodes surrounding the beads and connected to the pin and an outer electrode, and means for electrically connecting the outer electrode to the ground plate.



3,275,955
DIELECTRIC-METAL WAVEGUIDE
Marie Pierre Prache, Versailles, France, assignor to Lignes Telegraphiques & Telephoniques, Paris, France
Filed July 15, 1964, Ser. No. 382,905
Claims priority, application France, Aug. 6, 1963, 943,907; Apr. 30, 1964, 972,909
6 Claims. (Cl. 333—95)

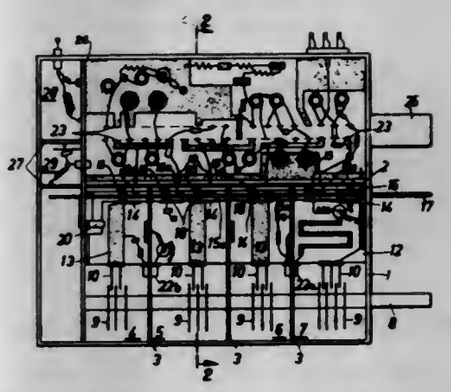
1. A transmission circuit for very high frequency electromagnetic waves, adapted to the transmission of a preferred mode having a circular symmetry about a longitudinal axis of said circuit, comprised of a homogeneous cylindrical tube made of a high permittivity and low loss dielectric material inside which are embedded lengths of thin metallic wires spaced and insulated from each other and substantially oriented in a direction in which the electric field of said preferred mode has a zero component, in which said preferred mode is a fundamental circular-symmetrical TM mode and in which said wire lengths are oriented in planes substantially perpendicular to said axis and along circles having their center on said axis.

2. A transmission circuit for very high frequency electromagnetic waves, adapted to the transmission of a preferred mode having a circular symmetry about a longitudinal axis of said circuit, comprised of a homogeneous cylindrical tube made of a high permittivity and low loss dielectric material inside which are embedded lengths of thin metallic wires spaced and insulated from each other and substantially oriented in a direction in which the electric field of said preferred mode has a zero component, in which said preferred mode is a fundamental circular-symmetrical TE mode and in which said wire lengths are oriented in radial directions passing through said axis and located in planes substantially perpendicular thereto.

3,275,956
DIELECTRIC WAVE GUIDE
Marie Pierre Prache, Versailles, France, assignor to Lignes Telegraphiques & Telephoniques, Paris, France
Filed July 15, 1964, Ser. No. 382,906
Claims priority, application France, Aug. 6, 1963, 943,906
4 Claims. (Cl. 333—95)

1. A transmission line for very high frequency electromagnetic waves, adapted to the propagation of the fundamental TM mode having revolution symmetry about a longitudinal axis of said line, comprising a circular cylindrical tube of low-loss dielectric material, in which said dielectric tube comprises principal elongated elements the length of which extends in a direction parallel to said axis and each having their transversal cross-section limited by two circular arcs centered on said axis and two straight line segments passing through said axis, said principal elements being separated from each other by auxiliary strips having smaller cross-section than the principal elongated elements and constituted of a dielectric material having a permittivity lower than that of the material constituting said elements.

4. A transmission line for very high frequency electromagnetic waves, adapted to the propagation of the fundamental TE mode having revolution symmetry about a longitudinal axis of said line, comprising a circular cylindrical tube of low-loss dielectric material, in which said dielectric tube is made up from rings alternately consisting of dielectric materials having a higher and a lower permittivity, said rings being stacked in the direction of said longitudinal axis and the length along said direction of the lower permittivity rings being shorter than that of the higher permittivity rings.



3,275,957
MICROWAVE ENERGY WINDOWS WITH CONDUCTIVE COATING FOR DISSIPATING STATIC CHARGES
Alan Hugh Pickering, Frederick Charles Thompson, and Arthur James Young, Essex, England, assignors to English Electric Valve Company Limited, London, England, a British company
Filed Aug. 19, 1963, Ser. No. 303,038
Claims priority, application Great Britain, Oct. 1, 1962, 37,029/62
7 Claims. (Cl. 333—98)

1. A microwave energy window of insulating material having on at least one of its surfaces a thin resistive conductive coating shaped to form at least one conductor extending substantially perpendicularly to the direction of

the high frequency electric field component in the plane of the window.

3,275,958
U.H.F.-V.H.F. TUNER WITH SWITCHABLE COMMON ELEMENTS
Josef Rehm, Wolnzach Bahnhof, and Robert Mittenhuber, Ingolstadt, Germany, assignors to Telefunken Patentverwertungs-G.m.b.H., Ulm (Danube), Germany
Filed Sept. 15, 1964, Ser. No. 396,560
Claims priority, application Germany, Sept. 18, 1963, T 24,727
19 Claims. (Cl. 334—3)

1. For use in a television receiver, a combined U.H.F. and V.H.F. channel selector switch comprising, in combination:

(a) a housing;

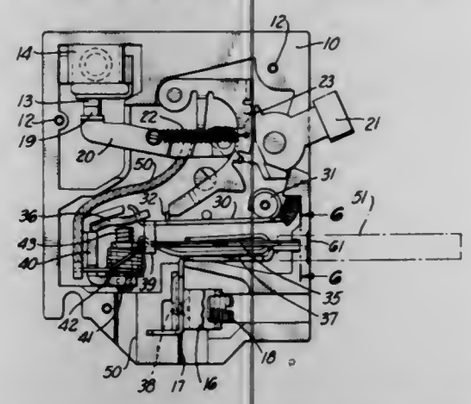
(b) a main partition arranged in said housing and dividing the same into a U.H.F. part and a V.H.F. part, said housing and partition constituting "ground";

(c) capacitatively turnable resonant tank circuit means arranged in said U.H.F. part of said housing, said resonant tank circuit means including inner conductors each having one end directed toward said partition;

(d) inductance means incorporating a plurality of inductances arranged in said V.H.F. part; and

(e) change-over switch means for connecting said inductance means to said inner conductors of said resonant tank circuit means to adapt the switch for V.H.F. operation, said switch means being arranged in the region of said partition and movable between a U.H.F. position wherein said one end of each of said inner conductors is connected directly to ground and a V.H.F. position wherein said one end of each of said inner conductors is connected to a respective one of said inductances.

3,275,959
CIRCUIT BREAKER WITH EXTERNALLY ADJUSTABLE TRIPPING MECHANISM
Ross E. Locher, South Pasadena, Calif., assignor to Zinsco Electrical Products, Los Angeles, Calif., a corporation of California
Filed Dec. 15, 1964, Ser. No. 418,406
5 Claims. (Cl. 335—35)



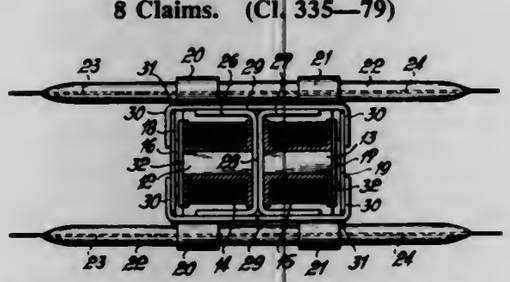
3. In a circuit breaker having a releasable switch, the combination of:

a housing comprising first and second body members joined together along an edge;

a trip member mounted within said housing for releasing said switch;

a mounting bracket carried adjacent one end in said housing and having a plate-like section at the other end;

a thermal responsive member mounted on said plate-like section, with a portion spaced from said bracket disposed for engaging said trip member; and



an adjusting strip removably inserted between said body members along said edge for springing said body members apart and having a notch engageable with said bracket for bending said bracket and varying the position of said bracket and said thermal responsive member relative to said trip member.

3,275,960
BISTABLE MAGNETICALLY CONTROLLED SWITCH

Edmund K. Gärtner, Frankfurt am Main, and Thea Schaffert, Petterweil, Germany, assignors to Telefonbau und Normalzeit G.m.b.H., Frankfurt am Main, Germany

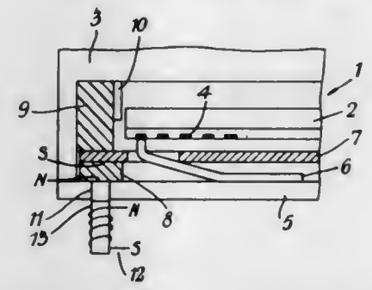
Filed Aug. 16, 1965, Ser. No. 480,006
Claims priority, application Germany, Oct. 23, 1964, T 27,269
8 Claims. (Cl. 335—79)

1. A bistable magnetically controlled switch comprising in combination:

(a) a pair of aligned permanent bar magnets;

(b) a pair of energizing windings each operatively related to one of said pair of magnets;

(c) a pair of magnetizable reeds forming a pair of cooperating contacts;



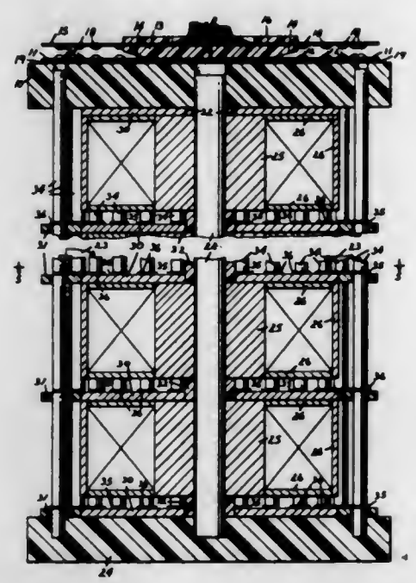
(d) a pair of flux-carrying members of magnetizable sheet metal each including a first portion arranged adjacent and parallel to remote pole surfaces of said pair of magnets and each including a second portion bent out of the general plane of said first portion and having an end situated immediately adjacent to one of said pair of reeds; and

(e) a structure of magnetizable material including a portion arranged between juxtaposed pole surfaces of said pair of magnets and further including a pair of axial extensions each having an end overlapping said end of said second portion of one of said pair of flux-carrying members and separated from said end of said second portion of one of said pair of flux-carrying members by a gap of predetermined width.

3,275,961
WIPER LIFT ENCODERS

Noel Percival Parkinson, Wembley, England, assignor to Moore Reed and Company Limited

Filed Jan. 11, 1965, Ser. No. 424,523
Claims priority, application Great Britain, Jan. 17, 1964, 2,279/64
10 Claims. (Cl. 335—106)



1. A digital encoder comprising an electrical contact support element, a plurality of electrical contacts disposed on said support element, a wiper for sensing engagement with said contacts, one of said support element and wiper being movable relative to the other for successive sensing operation, a housing member of fixed disposition relative to the encoder, resilient compression means operably out of sensing engagement, and sensing control means selectively operable to compress said resilient compression located between said housing member and one of said element and wiper urging the latter component in a first direction transverse to the direction of support element-wiper movement to hold said wiper and contacts normally means in a second direction opposite to said first direction to effect sensing engagement between said wiper and contacts.

3,275,962
ELECTRICAL CIRCUIT SELECTOR

Richard H. Long, E. 1428 Park, Grants Pass, Oreg.

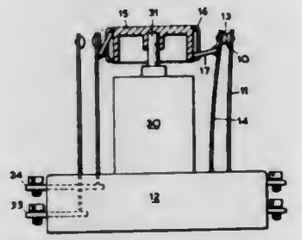
Filed Mar. 26, 1964, Ser. No. 354,951
3 Claims. (Cl. 335—107)

1. An electrical circuit selector, comprising:

a rigid framework including a fixed end member;

a plurality of movable electrical contacts mounted on said end member;

a plurality of actuating rods, said rods being independently mounted on said framework for longitudinal axial motion relative thereto in parallel directions, each rod being in longitudinal axial alignment with one of said electrical contacts;



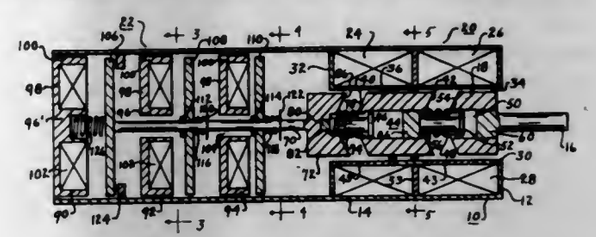
a plurality of electro-magnetic units stacked on said framework in axially spaced positions along the length of said rods, each electromagnetic unit including a wound core fixed to said framework and a movable metal plate adjacent thereto, each metal plate being apertured to slidably receive said rods;

and removable protruding elements on a pre-selected combination of said rods adjacent to each of said plates.

3,275,963
ELECTRICAL CONTACT ARRANGEMENT SETTABLE AT WILL TO BE NORMALLY OPENED OR NORMALLY CLOSED

Hans Hoel, Oslo, Norway, assignor to The English Electric Company Limited, London, England, a British company

Filed July 31, 1964, Ser. No. 386,712
Claims priority, application Great Britain, Sept. 4, 1963, 34,957/63
6 Claims. (Cl. 335—121)



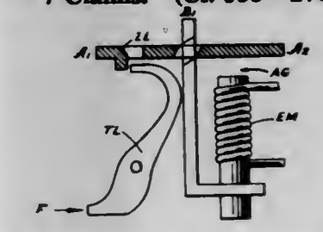
1. An electrical contact arrangement comprising a body portion, first and second contact members, means mounting first and second contact members on the said body portion and constraining movement thereof relative to the body portion along a first predetermined line between mutually engaged and mutually disengaged positions, an operating member movable along a second predetermined line approximately normal to the first line, first and second stops in one of the second contact members and the operating member spaced apart in a direction parallel to said second line, pivot holding means in the other of the second contact member and the operating member, a rigid operating link, first and second pivot means at the two ends of the said rigid operating link, the rigid operating link being pivoted at one end about said pivot holding means and settable at will to pivot about one of the said first and second stops, whereby, when the link pivots about the first stop, movement of the operating member in one direction along the second line moves the second contact member from the disengaged to the engaged position, and, when the link pivots about the second stop, movement of the operating member in the same direction moves the second contact member from the engaged to the disengaged position.

3,275,964
MULTIPLE POSITION SOLENOID DEVICE

Brent Kumm, South Bend, Ind., assignor to Koontz-Wagner Electric Company, Inc., South Bend, Ind., a corporation of Indiana

Filed Jan. 6, 1964, Ser. No. 335,904
10 Claims. (Cl. 335—259)

1. A multiple position solenoid device, comprising a cylindrically-shaped housing, first and second coils mounted in one end of said housing and having hollow cores, two axially movable plunger-like armatures disposed in said cores and spaced from one another for relative axial movement, a lost motion connection between said armatures, a stem on one of said armatures for connection with an element to be operated by said device, a plurality of additional coils having cores with hollow centers spaced from one another in axial alignment in said housing, a shaft extending through the cores and having a head thereon, a lost motion connection between said armatures and said head, a disc-shaped armature on said shaft for each of said last mentioned coils, each being spaced progressively further from its respective coil when



the coils are deenergized, and a lost motion connection between said shaft and each of said last mentioned armatures except the one having the greatest distance to travel to its respective coil when the coil is energized.

3,275,965
BIASED PIVOT ASSEMBLY

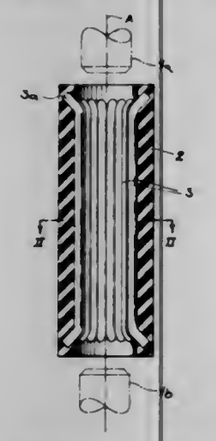
George W. Knecht, Brooklyn, N.Y., assignor to Murray Manufacturing Corporation, Brooklyn, N.Y., a corporation of New York

Filed Apr. 7, 1964, Ser. No. 357,877
7 Claims. (Cl. 335—276)

6. An electromagnetic circuit comprising an electromagnet, and a biased armature assembly in series with said electromagnet in said magnetic circuit, said armature assembly comprising the combination of a pivotal member having a defined neck portion, a pivoting member having an aperture disposed at the center of gravity thereof and embracing therein the neck portion of said pivotal member, and means at the neck-aperture intersection for providing a pair of pivots offset on either side of the said center of gravity, the effective one of which is always on the same side regardless of the assembly's attitude.

3,275,966
ELECTRICAL TRANSFORMER HAVING A WOVEN WINDING

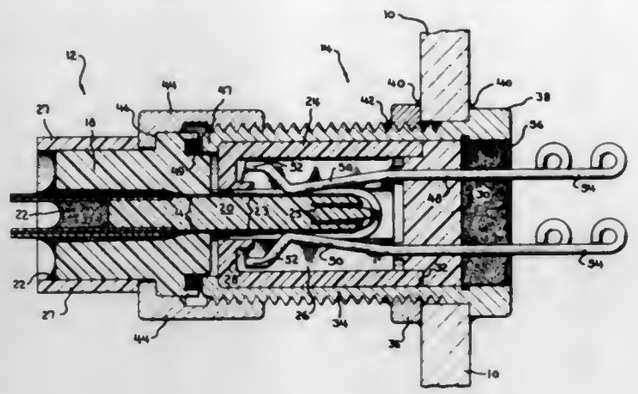
Artie Dale Ashby, Jr., Arbutus, and Edward R. Higgins, North Linthicum, Md., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa., a corporation of Pennsylvania



Filed Jan. 13, 1964, Ser. No. 337,331
5 Claims. (Cl. 336—181)

1. An electrical transformer comprising a plurality of input windings and at least one output winding all having

terminals adapted for connection to external electrical circuits, magnetic core means, at least said plurality of input windings being formed of a plurality of insulated conductors, said insulated conductors being interleaved, forming a substantially flat assembly of woven conductors disposed in substantially the same plane, said assembly of conductors being disposed in inductive relation with said magnetic core means, forming a plurality of individual windings having similar electrical characteristics.



3,275,967
ELECTRICAL COUPLING WITH TWO SLEEVE-CONNECTED PLUGS
Erich Hamm, Romerstrasse 151, Wesseling, near Cologne, Germany
Filed Sept. 2, 1965, Ser. No. 484,563
Claims priority, application Germany, Jan. 4, 1961, H 41,380; Feb. 23, 1961, H 41,824
9 Claims. (Cl. 339—61)

1. An electrical connector comprising a radially deformable elongated supporting sleeve of resilient material provided with a through-going longitudinal bore, said bore being of constant cross-section over at least the major portion of its length, and an array of at least three substantially identical stiff and mutually unconnected elongated conductor elements tangent to the periphery of an imaginary circular cylinder coaxial with said bore, said elements linging the wall of said bore and extending substantially throughout the length thereof in a direction parallel to said axis with freedom of independent individual displacement away from said axis, against the sole resistance of said resilient material, under pressure of a pair of mating plugs inserted into said bore from opposite ends, each of said elements having its extremities anchored to opposite ends of said sleeve.

3,275,968
CONNECTOR FOR A FLEXIBLE FLAT CABLE
William Stephen McCaughey, Camp Hill, Pa., assignor to AMP Incorporated, Harrisburg, Pa.
Filed June 23, 1964, Ser. No. 377,326
2 Claims. (Cl. 339—89)

1. A plug termination for a flexible flat cable, said cable comprising a plurality of conductors in side-by-side parallel relationship with each conductor being surrounded by insulating material, an end portion of said cable being folded along a fold line extending parallel to the axis of said cable whereby said end portion comprises two group of parallel conductors disposed in at least two coextensive planes, said cable fairing from a flat condition, in which said conductors are parallel and co-planar, to said folded condition, spacer means between said coextensive planes, the end portions of said conductors being secured to, and supported by, said spacer means, a cylindrical support in surrounding relationship to said spacer and said end portions of said cable, coupling means mounted on said support, said coupling means and said end portions extending beyond said cylindrical support,

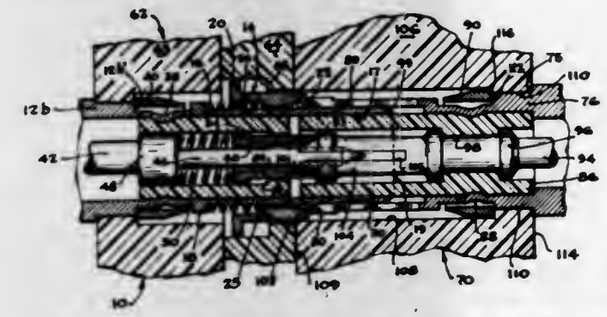
said coupling means being engageable with a complementary receptacle having means therein for contacting said conductors.

3,275,969
WIRE SHORTENING AND TYING DEVICE
Charles Sheeran, Cranston, R.I., assignor to Victor Electric Wire & Cable Corp., Coventry, R.I.
Filed Nov. 2, 1964, Ser. No. 408,070
14 Claims. (Cl. 339—103)

1. A tie for securing into a bundle a plurality of folded portions of an electrical wire which is a part of an electrical assembly, said tie comprising a relatively thin flexible strap having two ends and two flat sides

(A) a raised boss at one end of said strap having,
  (1) a groove therein adapted to receive a portion of said electrical wire
(B) an elongated hole through said strap adjacent said boss,
(C) a button extending from one flat side of said strap at the other end of said strap, said button having
  (1) a flat cap
  (2) a neck portion smaller in diameter than said cap and adapted to fit in said elongated hole in engagement with the sides of said hole retained therein by said cap,
(D) means at the same end of said strap as said button and at the other flat side of said strap for joining said strap to said electrical assembly.

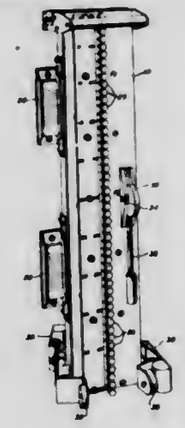
3,275,970
CONNECTOR
Bengt J. Johanson, Des Plaines, and Nick Oskerka, Jr., Hillside, Ill., assignors to United-Carr Incorporated, a corporation of Delaware
Filed Feb. 6, 1964, Ser. No. 343,085
1 Claim. (Cl. 339—143)



An improved shielded electrical connector defined by mating connector components which provide an assured continuous electrical path between the components, said connector comprising:

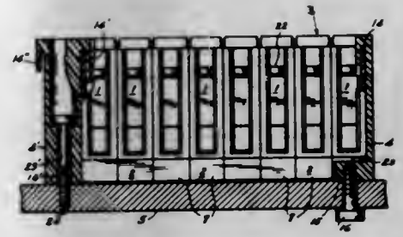
a shield associated with each of said mating connector components, the shield of one of said components having a collar thereon and terminating in a conical face, a portion of the shield of the other of said components having a plurality of flexible finger elements each terminating in a truncated conical face,

the truncated conical face of said finger elements defining an obtuse angle with respect to the longitudinal axis of said shield;



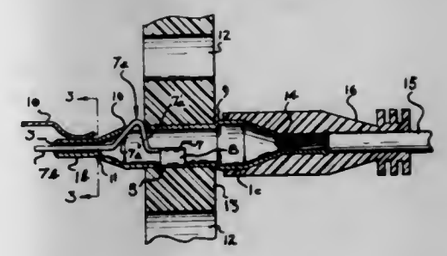
a spring member mounted on said one component, one end of said spring engaging the collar extending from said one component end;

a radially rigid sleeve element telescopically mounted on the shield of said one component, one end of said sleeve engaging the other end of said spring element, the other end of said sleeve having a truncated con-



ical face, the truncated conical face of said sleeve defining an acute angle with the longitudinal axis of said shield, the conical face of said sleeve deflecting the flexible finger elements of the other shield into positive electrical contact with said one shield, said spring element biasing the sleeve into positive engagement with the fingers to maintain a radially inward force component on the fingers to maintain positive electrical contact between the connector components.

3,275,971
CONNECTOR
John H. King, Chatham, N.J., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Aug. 7, 1964, Ser. No. 388,144
5 Claims. (Cl. 339—151)

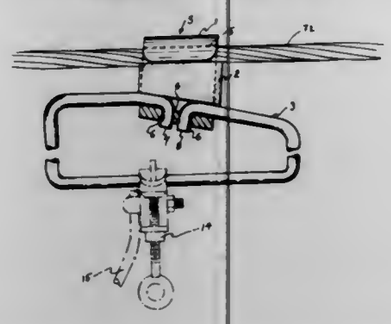


1. Apparatus for providing test connections for a plurality of pairs of electrical conductors comprising, in combination, a U-shaped body member, a platform member pivotally mounted on said body member, a support structure fixedly mounted on said body member, a plurality of pairs of contact members pivotally mounted on said support structure, said contact members normally being urged under spring force to maintain contact with corresponding ones of said conductors, means including said platform member for pivoting all of said contact members in concert thereby to break contact with said conductors and means for selectively locking pairs of said contact members in a relatively open position out of contact with said conductors whereby operation of said pivoting means makes or breaks contact between only preselected ones of said contacts and corresponding ones of said conductors.

3,275,972
TERMINAL ASSEMBLY
Josef Eisert, Heinrichstrasse 1–7, Essen, Germany
Filed Nov. 13, 1963, Ser. No. 323,453
Claims priority, application Germany, Nov. 17, 1962, E 23,881
14 Claims. (Cl. 339—198)

1. A terminal assembly comprising an elongated flexible bar of resiliently deformable but substantially inextensible insulating material; a series of closely adjacent and substantially identical flat dielectric casings with at least partly closed bottoms and open tops secured to said bar in the region of said tops, said casings extending transversely to said bar and being spreadable at their bottoms upon a coiling of said bar upon a center remote from said bottoms; a series of terminal carriers respectively received in said casings, said carriers being overlain by said bar; and a base supporting said casings; and fastening means including a pair of end plates securing said casings to said base.

3,275,973
ONE PIECE PLUGBOARD PLUG CONNECTOR
Bernard Edward Shlesinger, Jr., Annandale, Va., assignor to AMP Incorporated, Harrisburg, Pa.
Filed July 26, 1965, Ser. No. 474,932
24 Claims. (Cl. 339—217)

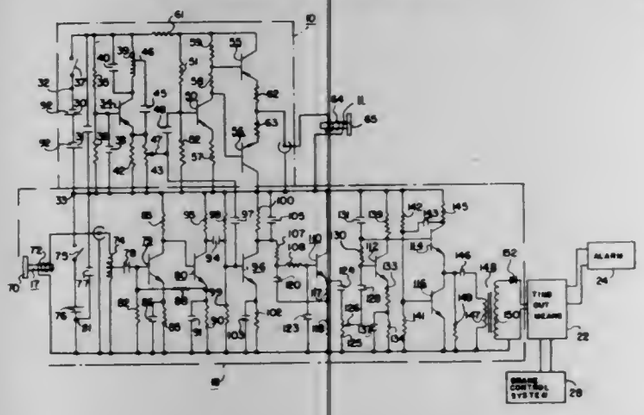


1. A one-piece plug connector comprising a sleeve having a stabilizing section extending outwardly from one end and a pair of aligned openings, one opening being disposed adjacent said stabilizing section, the other opening being spaced from said stabilizing section; a detent member integrally anchored at one end to a piece within said sleeve and including a first section extending from said piece and along an interior surface of said sleeve to said other opening, a second section defining a detent section extending through said other opening and outwardly beyond an exterior surface of said sleeve, a third section extending from said second section through said one opening and along said stabilizing section, and a fourth section defining a nose portion surrounding said stabilizing section; said fourth section being movable relative to said stabilizing section upon a force being applied thereto causing said detent section to remain in a stationary or move slightly outwardly from a normal position of rest.

3,275,974
ELECTRICAL STIRRUP CONNECTOR

James Lenhart Mixon, Jr., Harrisburg, Pa., assignor to AMP Incorporated, Harrisburg, Pa.

Filed Apr. 6, 1964, Ser. No. 357,715
11 Claims. (Cl. 339—243)

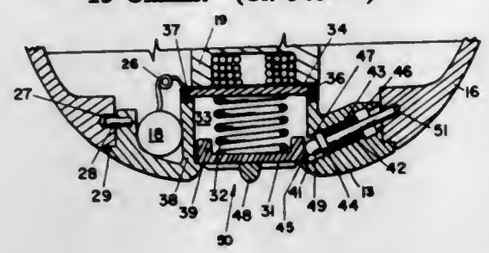


1. An electrical stirrup connector for making tap connections to an electric power line comprising: a connector body member adapted to engage a section of said electric power line, said connector body having an opening to permit said connector body to be placed on said electric power line, a wire loop having a part thereof for disposition in said connector body member, means for securing said part of said wire loop within said connector body to prevent any arcuate movement of said wire loop relative to said connector body, and a wedge-shaped member for engagement within said connector body member to wedge the section of said electric power line and the part of said wire loop between the inner surface of said connector body member and said wedge-shaped member to provide connection therebetween.

3,275,975
ULTRASONIC DETECTING MEANS

Joseph W. King, Lakewood, Ohio, assignor to Cleveland Technical Center, Inc., Cleveland, Ohio, a corporation of Delaware

Filed Dec. 21, 1964, Ser. No. 419,758
12 Claims. (Cl. 340—1)

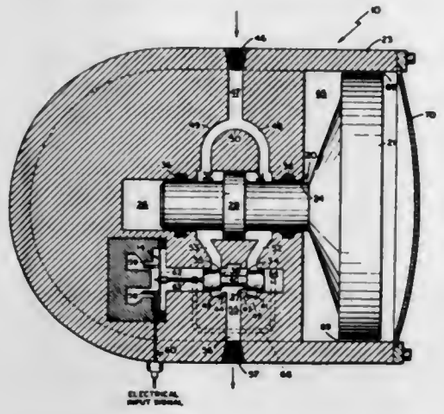


1. In a system for detecting the absence of movement of an ultrasonic energy reflecting body within a predetermined period comprising:
an ultrasonic transmitter for transmitting a beam of energy toward said body;
an ultrasonic Doppler receiver including a transducer for receiving energy reflected from said body;
alarm means for indicating the failure of said receiver to receive a Doppler signal from said body within said predetermined period; and
resettable time-out means connected between said receiver and said alarm means and including means for actuating said alarm means when no Doppler signal is received within said predetermined period.

3,275,976
BOTTOM RELEASE MECHANISM FOR A SONOBUOY

Everett W. Farmer, Reeds Ferry, N.H., assignor to Sanders Associates, Inc., Nashua, N.H., a corporation of Delaware

Filed Mar. 26, 1964, Ser. No. 354,944
13 Claims. (Cl. 340—2)

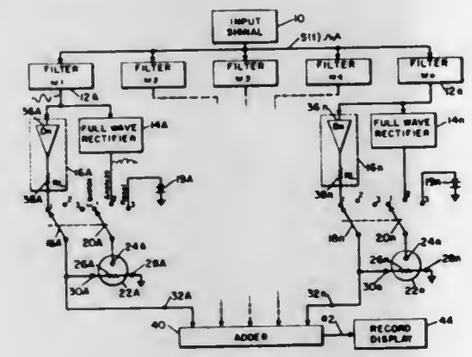


9. A water impact release mechanism for an air launched sonobuoy's contents from said sonobuoy comprised of:
(A) a bottom cap mounted on said sonobuoy to retain said sonobuoy's contents within said housing until said water impact,
(B) an air damped release button having a low moment of inertia mounted within said bottom cap and movable to a release position under the pressure of a dynamic water force upon said water impact, said air damped release button's low moment of inertia thereby providing said release button with the ability to resist high frequency, short duration, shock forces without moving to said release position, and release means activated by said button in its release position to allow the release of said housing's contents.

3,275,977
HYDROACOUSTIC TRANSDUCER WITH CENTERING MEANS

John V. Bouyoucos, 10 Blossom Circle E., Rochester, N.Y.

Original application Nov. 10, 1961, Ser. No. 151,516, now Patent No. 3,212,473. Divided and this application May 28, 1965, Ser. No. 459,859
9 Claims. (Cl. 340—15)

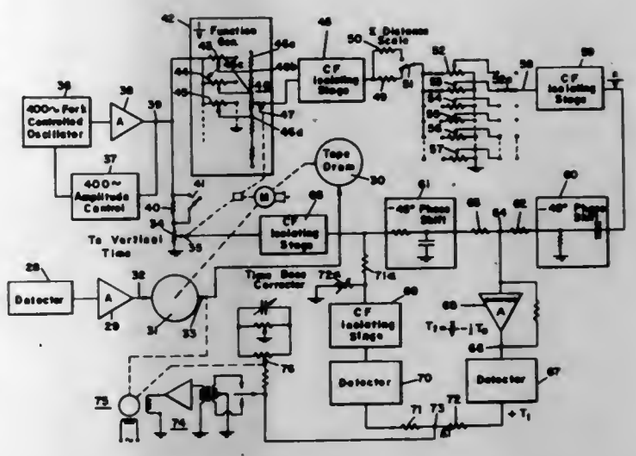


1. A hydroacoustic device comprising
(a) a housing having a cavity therein,
(b) a valving member disposed in said cavity, moveable about a center position,
(c) means including a first path in said housing for passing fluid under pressure through said cavity under the control of said valving member for establishing acoustic vibrations,
(d) said valving member and the walls of said cavity defining at least one chamber,
(e) impedance means in a second path in said housing communicating with said chamber for the flow of fluid into and out of said chamber,
(f) said impedance means including a fluid line having an acoustic impedance higher than that of said valving member at the frequency of vibration of said valving member, and
(g) said valving member and said walls of said cavity defining at least one orifice for controlling the flow of fluid to said one chamber so that motion of said valving member with respect to said center position at a frequency lower than the frequency of said acoustic vibrations results in a pressure variation in said chamber, which pressure variation urges said valving member to said center position.

3,275,978
SEISMIC SIGNAL PROCESSING BY EQUALIZATION OF FREQUENCY COMPONENTS OF A SEISMIC SIGNAL

John L. Shanks, Tulsa, Okla., assignor, by mesne assignments, to Esso Production Research Company, Houston, Tex., a corporation of Delaware

Filed Mar. 1, 1963, Ser. No. 262,106
5 Claims. (Cl. 340—15.5)



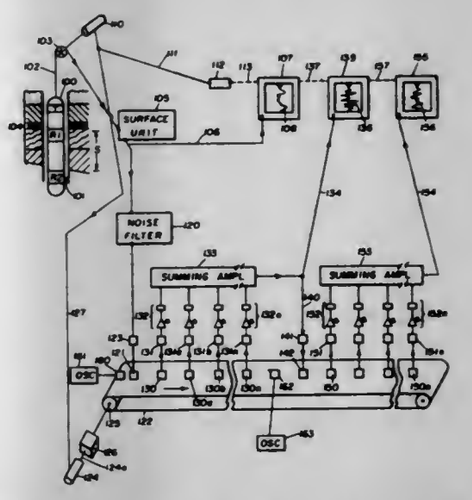
1. An apparatus for processing a seismic signal which comprises in combination: a set of a plurality of parallel sharply-tuned band pass filter sections with each filter section being tuned for a different frequency; rectifier means connected to the output of each such filter section; a constant current source connected to the output of each said filter section and parallel with said rectifier means; a chemical integrator for each filter section, said chemical integrator having a control element and a substrate resistance; switching means when in one position to connect the substrate resistance to said constant current source and to disconnect the control element from the rectifier means and when in a second position to disconnect the substrate resistance from the constant current source and to connect the control element to the rectifier means.

3,275,979
DYNAMICALLY OBTAINING NORMAL MOVEOUT CORRECTION

Silvan E. McAlpin, Dallas, Tex., assignor to Mobil Oil Corporation, a corporation of New York

Filed Apr. 29, 1963, Ser. No. 276,528
6 Claims. (Cl. 340—15.5)

4. A normal moveout correction system of the type which applies static and dynamic moveout correction to seismic signals received at a detector spaced from a shot point comprising first means for producing a signal proportional to the time between real time and shot time, second means for producing a horizontal time signal proportional to the distance between the shot point and a particular detector divided by the average velocity of the seismic wave from the shot point to the reflecting beds, a phase shifter connected to said first means and to said second means for phase shifting by 90° said real time signal and said horizontal time signal one from the other and for combining said phase shifted signals to produce a slant time signal proportional to the slant travel time

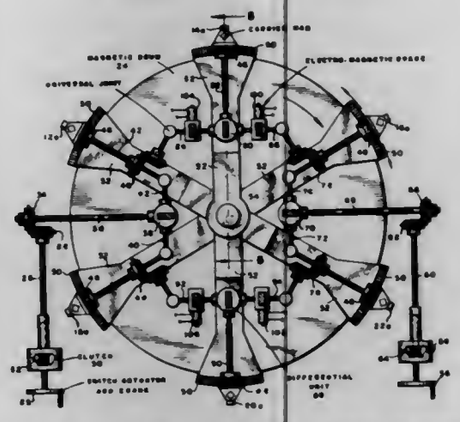


required for a wave to travel from said shot point to a reflecting interface and to said detector, and means for subtracting said real time signal from said slant time signal for producing an output proportional to the normal moveout correction required for seismic signals received at said detector.

3,275,980
METHODS OF INVERSE FILTERING GEOPHYSICAL DATA

Manus R. Foster, Irving, Tex., assignor to Mobil Oil Corporation, a corporation of New York

Filed May 29, 1963, Ser. No. 284,256
8 Claims. (Cl. 340—15.5)



1. In geophysical exploration, the method which comprises the steps of:
(a) generating as a dependent variable a first function controlled by an earth characteristic and which function has been filtered by an operator whose impulse response is a moving-average characteristic, and
(b) passing said first function through a system having an impulse response which converts said moving-average characteristic to a spike function to render said first function more representative of said earth characteristic and more free from system distortion.

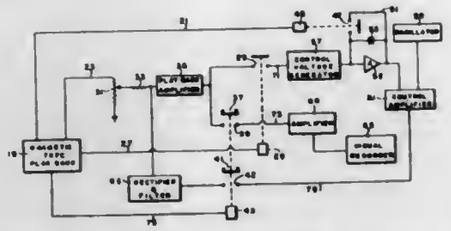
3,275,981
APPARATUS FOR CORRELATING DIP LOG TRACES

John H. Sasseen, Malcolm R. MacPhail, and Carl R. Wischmeyer, Houston, Tex., assignors, by mesne assignments, to Esso Production Research Company, Houston, Tex., a corporation of Delaware

Filed Aug. 22, 1963, Ser. No. 303,746
1 Claim. (Cl. 340—15.5)

In combination with a magnetic drum adapted for the recording of a plurality of dip log curves taken at a plurality of equally spaced measuring points around a borehole: six magnetic heads movably mounted about the magnetic drum; and first means connected to said six magnetic heads for displacing four of the six magnetic heads along the magnetic drum, said first means being constructed and arranged to displace a first magnetic head and a second magnetic head by equal amounts in opposite directions, and to displace a third magnetic head and a fourth magnetic head by equal amounts in opposite directions, with the displacements of the first and third magnetic heads being in the same direction, and second means connected to said first means to displace the fifth magnetic head an amount equal to the sum of the displacements of the first and third magnetic heads, and to displace the sixth magnetic head an amount equal to the sum of the displacements of the second and fourth magnetic heads; said first means for displacing four of the six magnetic heads comprising a first rotatable member, a first synchro generator operated by the first rotatable member, a first synchro motor and a second synchro motor connected to said synchro generator and to the first and second magnetic heads, respectively, a second rotatable member, a second synchro generator operated by the second rotatable member, and a third synchro motor and a fourth synchro motor connected to said second synchro generator and to the third and fourth magnetic heads, respectively; said second means comprising means including a synchro differential generator and a synchro motor connecting the first and third magnetic heads to the fifth magnetic head, and means including a synchro differential generator and a synchro motor connecting the second and fourth magnetic heads to the sixth magnetic head.

3,275,982
APPARATUS AND METHOD FOR NORMALIZING OR EQUALIZING SEISMOGRAM TRACES



Charles W. Bogs and Richard R. Tharp, Houston, Tex., assignors, by mesne assignments, to Esso Production Research Company, Houston, Tex., a corporation of Delaware

Filed Nov. 26, 1963, Ser. No. 326,042
7 Claims. (Cl. 340—15.5)

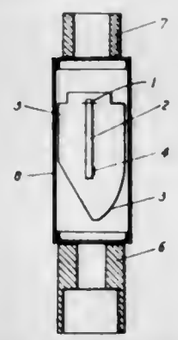
1. In seismic exploration wherein a seismic impulse is injected into the earth at a first location, resulting earth movements are detected at a multiplicity of locations spaced from said first location, and the detected earth movements are converted into electrical signals which are recorded as data traces on a reproducible recording medium, the method of eliminating or reducing the effects of variable seismic impulse parameters and variable detecting parameters from the individual data traces, comprising:

reproducing at least a portion of each data trace after the portion thereof corresponding to the reproduction of first arrival signals on the seismogram as a first individual electrical signal;

detecting the average value of a characteristic of said individual electrical signal that is variable as the result of variations in said variable seismic impulse parameters and variable detecting parameters;

producing a control electrical signal having an amplitude that is indicative of said average value;

again reproducing said each data trace to produce a second individual electrical signal;



amplifying said second individual electrical signal by an amount that is an inverse function of the amplitude of said control signal; and

recording said amplified signal.

3,275,983
ULTRASONIC INCLINATION METER

Tetsuichi Kaneko, Tokyo, Japan, assignor to Oyo Chishitsu Co. Ltd., Tokyo, Japan, a corporation of Japan

Filed July 30, 1963, Ser. No. 298,783
Claims priority, application Japan, Aug. 7, 1962, 37/32,587
4 Claims. (Cl. 340—18)

1. Inclination metering apparatus comprising, in combination, electrical pulse driving, receiving and recording equipment and an ultrasonic inclination meter,

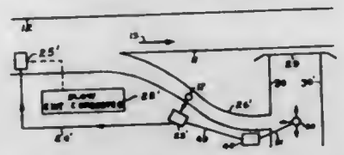
said meter comprising a casing, a pivot mounted within the casing, a pendulum suspended from the pivot to freely rotate about said pivot in one plane of rotation,

a transducer mounted on said pendulum and electrically connected to said pulse equipment, a reflecting plate mounted within said casing, and

a liquid filling said casing and immersing the pendulum transducer and reflecting surface,

wherein the transducer is driven to propagate ultrasonic pulses toward, and receive reflected pulses from, the reflecting plate,

wherein the distance between the transducer and the reflecting plate changes in direct proportion to the change in the inclination angle from the vertical of the meter in the plane of rotation of the pendulum,



wherein the propagated and reflected pulses are recorded on the pulse recording equipment, and

wherein the time elapse between the propagated and reflected pulses provides a direct measurement of said inclination angle.

3,275,984
TRAFFIC MONITORING AND CONTROL SYSTEM

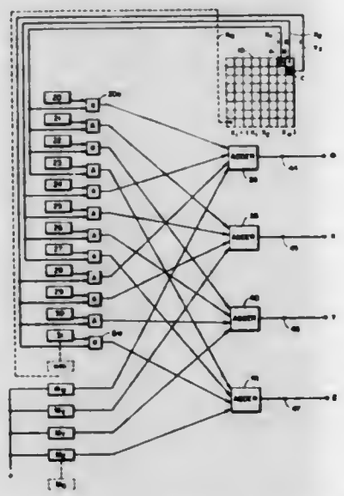
John L. Barker, Norwalk, Conn., assignor to Laboratory for Electronics, Inc., Waltham, Mass., a corporation of Delaware

Continuation of application Ser. No. 791,460, Feb. 5, 1959, now Patent No. 3,237,154, dated Feb. 22, 1966. This application May 27, 1965, Ser. No. 459,284
12 Claims. (Cl. 340—31)

5. A traffic control system for an exit ramp from an expressway or the like to another road, including

means for sensing a characteristic of traffic flow along said exit ramp, said sensing means providing an electrical signal output having a running average value representing a running average of said traffic flow characteristic as averaged over a series of vehicles in said traffic flow,

means for providing from said output a further electrical signal output having a value representing the rate of change of said average value as representative of the rate of change of said sensed traffic flow characteristic,



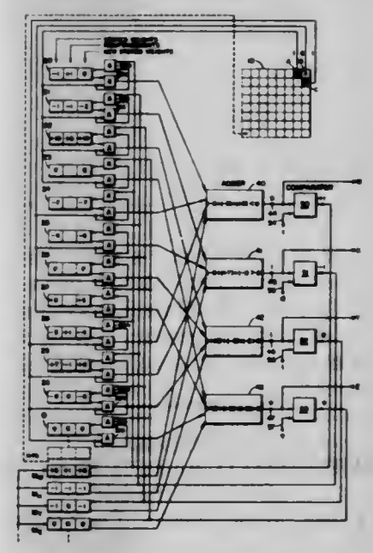
traffic control means near one end of said ramp,

and means coupled to said traffic control means and to said further output for controlling said traffic control means in response to said further output beyond a predetermined value representing a rate of change in said traffic flow characteristic beyond a predetermined minimum amount in a predetermined direction of change.

3,275,985
PATTERN RECOGNITION SYSTEMS USING DIGITAL LOGIC

William H. Dunn, Red Bank, N.J., Curt F. Fey, Chevy Chase, Md., and Laveen N. Kanal and William L. McDermid, Rochester, and Donald F. Smith, Pittsford, N.Y., assignors to General Dynamics Corporation, Rochester, N.Y., a corporation of Delaware

Filed June 14, 1962, Ser. No. 202,525
15 Claims. (Cl. 340—146.3)



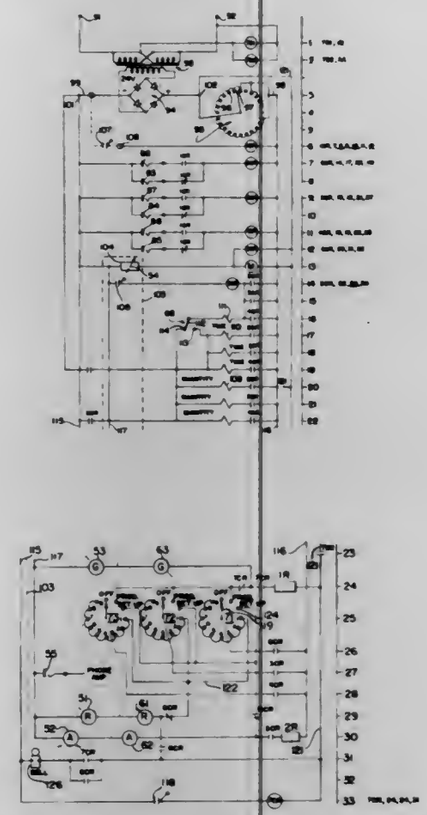
1. A pattern recognition system comprising a plurality of sensing elements for observing the elements of a pattern, a plurality of groups of weight stores, an adder, means for successively gating the weight contents of the stores of the groups of stores to said adder, a register for receiving the summation quantity of each addition, a first and second threshold number generator, a comparator, means for coupling said comparator to said register and to said threshold generators for successively comparing the contents of said register with a first and second threshold number, a plurality of output lines, means for coupling said lines successively to said register for reading out a logical 1 or 0 depending, respectively, on whether the contents of said register is greater than 0 for producing on said output lines a binary output number to identify each pattern, and logical circuit means coupled to said comparator for indicating when the numerical content of said register is intermediate the numerical content of said first and second threshold number.

3,275,986
PATTERN RECOGNITION SYSTEMS

William H. Dunn, Red Bank, N.J., Curt F. Fey, Chevy Chase, Md., and Laveen N. Kanal and William L. McDermid, Rochester, and Donald F. Smith, Pittsford, N.Y., assignors to General Dynamics Corporation, Rochester, N.Y., a corporation of Delaware

Filed June 14, 1962, Ser. No. 202,529
8 Claims. (Cl. 340—146.3)

1. A pattern recognition system for classifying, by a coded binary number, each of many patterns of an array of two-valued signals, said system comprising an array of sensing elements for deriving said signals, a plurality of groups of storage devices, the storage devices of each group being enabled and disabled, respectively, by the two values of a different one of said signals and each storage device containing a numerically weighted parameter capable of incremental changes, and a plurality of adders, each adder being associated with one storage device of each of said groups to produce a logical 1 or 0 determined by, respectively, summations of said weighted parameters of enabled storage devices which are above and below predetermined threshold values.



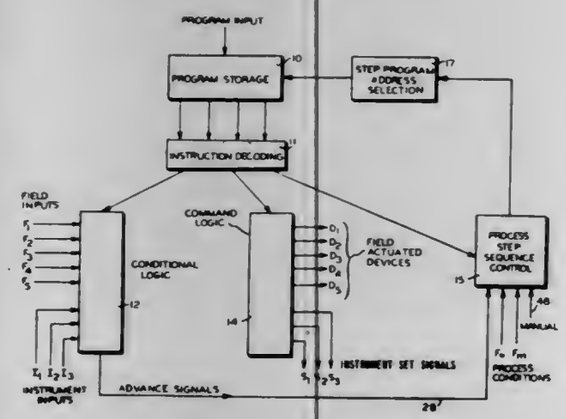
3,275,987
PRODUCTION MONITORING SYSTEM

Charles G. Mann, Farmington, Mich., assignor to Weltronic Company, Southfield, Mich., a corporation of Michigan

Filed May 15, 1961, Ser. No. 109,898
12 Claims. (Cl. 340—147)

4. A system for monitoring machine operations comprising a work station located in the vicinity of the machine to be monitored, a central station remote from

said machine, manually operative means at said work station for indicating conditions at said work station, a read-out mechanism at said central station responsive to said manually operative means at said work station, manually

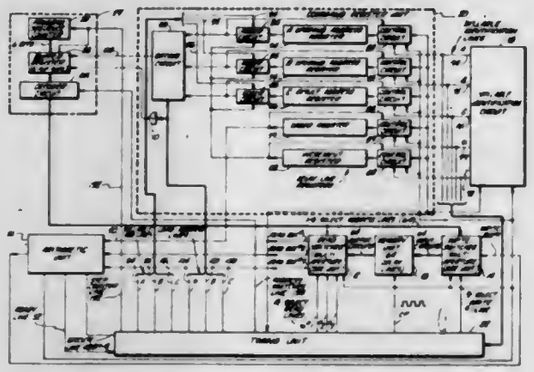


operative means at said central station for selectively assigning said work station to a selected one of a plurality of predetermined production classifications and means responsive to said assigning means for recording the assigned classification of said work station on a time basis.

3,275,988
PROGRAMMED BATCH SEQUENCE CONTROLLER

Edward W. Yetter, West Chester, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

Filed Aug. 21, 1961, Ser. No. 132,656
9 Claims. (Cl. 340—172.5)

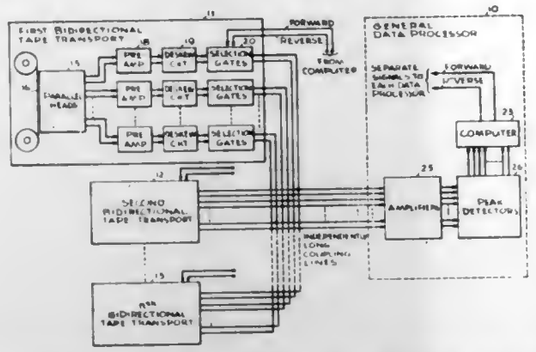


1. A batch sequence controller, comprising, in combination, program storage means, a conditional logic section, a command logic section and a process step sequence control section all obtaining instructions in coded form from said program storage means as to individual apparatus to be placed in circuit effectuating a preselected control objective, means in said conditional logic section initiating progression of said process step sequence control section to a predetermined process control step in later time sequence upon the signalled effectuation of a current process control imposition pursuant to the immediately preceding process control step, and process step program address selection means responsive to said process step sequence control section actuating said program storage means to supply said instructions in coded form unique to said predetermined process control step for repetition of the control cycle.

3,275,989
CONTROL FOR DIGITAL COMPUTERS

Edward L. Glaser, Newtown Square, Pa., and Alan B. Gerlach, Covina, Calif., assignors to Burroughs Corporation, Detroit, Mich., a corporation of Michigan

Filed Oct. 2, 1961, Ser. No. 142,095
19 Claims. (Cl. 340—172.5)

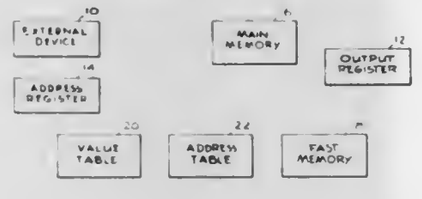


1. A stored program computer system comprising, addressable memory means for storing operands and variable length commands, the commands being arranged in a sequence and at least part of the commands having only those parts which are different from the corresponding part of a preceding command and including a signal identifying the part of the command which is present, means for reading commands out of the memory means, identification means connected to be responsive to the identification signals in a command read out of the memory means for providing an indication of the part which is present in such command, means connected to be responsive to said indication and the corresponding command for storing a signal corresponding to the part of the command which is present, means connected to be responsive to the signals stored in the last mentioned means for selectively addressing storage locations in said memory means containing operands which are to be read, means for reading the operands out of the addressed storage locations of the memory means, and an arithmetic unit connected to be responsive to the content of the signal storing means and the operands read out of said memory means for selectively executing a command.

3,275,990
SIGNAL COUPLING SYSTEMS FOR DIGITAL REPRODUCING SYSTEMS

Charles E. Mendenhall and Sung P. Chur, Los Angeles, Calif., assignors to Ampex Corporation, Redwood City, Calif., a corporation of California

Filed Aug. 21, 1962, Ser. No. 218,260
15 Claims. (Cl. 340—172.5)

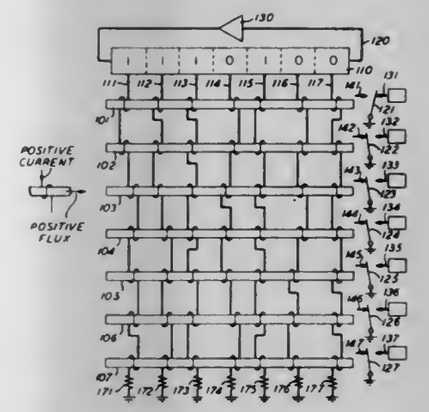


5. A signal coupling system for transmitting parallel digital data pulses over long line lengths comprising: means providing the digital data pulses in parallel channels; delay line means in each of the channels for adjusting the time relationship of pulses therein; first amplifier means in each of the channels coupled to receive pulses from the delay line means, the first amplifier means producing differentially varying signal currents; second, current-responsive amplifier means for receiving the digital data; and a plurality of conductor pairs coupling the first amplifier means to the second amplifier means.

3,275,991
MEMORY SYSTEM

Edward J. Schneberger, Canoga Park, Calif., assignor, by mesne assignments, to The Bunker-Ramo Corporation, Stamford, Conn., a corporation of Delaware

Filed Dec. 3, 1962, Ser. No. 241,597
11 Claims. (Cl. 340—172.5)



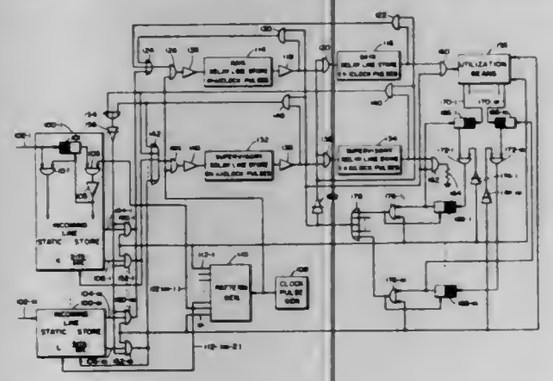
1. For use in a data processing system, a memory system comprising:
an output register;
a first memory having a relatively large number of word storage locations therein, each identifiable by a different digital address;
a second memory having a relatively small number of word storage locations therein;
a third memory including a plurality of storage locations therein each of which is associated with one of said locations in said second memory;
means storing a digital address in each of said third memory storage locations identifying the first memory storage location storing the word information stored in the associated second memory storage location;
external means adapted to generate a digital address identifying one of said first memory storage locations;
means responsive to said external means for transfering to said output register, word information from the second memory storage location associated with the third memory storage location storing said generated digital address and for transferring to said output register word information from the first memory storage location identified by said digital address in the event said digital address is not stored in said third memory; and
means responsive to said word information being transferred from a first memory storage location for storing said word information in a second memory storage location and the digital address identifying said first memory storage location in the third memory storage location associated with said second memory storage location.

3,275,992
LOAD SHARING CLOCK SUPPLIES

Peter G. Neumann, Berkeley Heights, N.J., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York

Filed Dec. 4, 1962, Ser. No. 242,199
15 Claims. (Cl. 340—172.5)

1. In combination, means for storing an ordered array of electrical binary impulses, the binary representation of said ordered array of electrical impulses corresponding to the binary representation of a difference set, means to successively and cyclically permute said ordered array, translating means responsive to successive cyclic permutations of said electrical impulses to produce successive time-phased output signals, said translating means comprising an array of input windings coupled to a plurality of flux responsive devices, the binary representation of the coupling senses of the windings coupled to said flux responsive devices corresponding to a cyclic block design, said cyclic block design being derived from said difference set, and means for respectively applying the ordered array of electrical impulses and the permutations thereof to said array of input windings whereby the locus of each time-phased output signal is determined by the cyclic permutation of said electrical impulses.

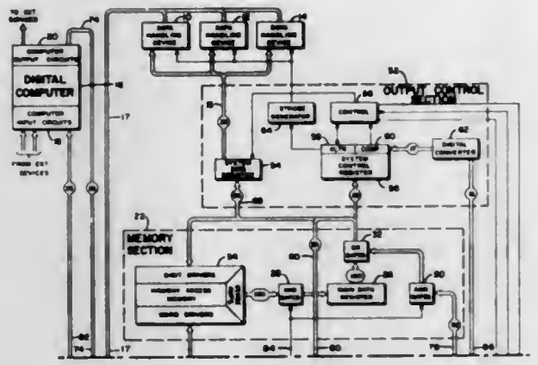


3,275,993
MULTIPLE SHIFT REGISTER BUFFER STORE

William F. Bartlett, Rochester, and Barrie Brightman, Webster, N.Y., assignors to General Dynamics Corporation, Rochester, N.Y., a corporation of Delaware

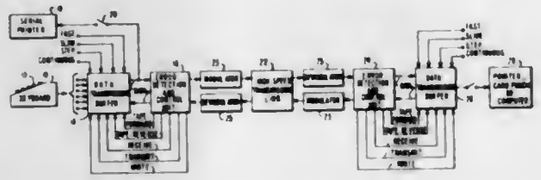
Filed July 1, 1963, Ser. No. 291,656
5 Claims. (Cl. 340—172.5)

1. In a data handling system, a multiple shift register buffer store for binary data received form a given plurality of separate input means and for supplying stored data to utilization means on command therefrom, said buffer store comprising a clock pulse generator for generating clock pulses at a predetermined repetition rate; a cyclically-operated pattern generator coupled to said clock pulse generator and having separate output conductors corresponding respectively to each of said given plurality of



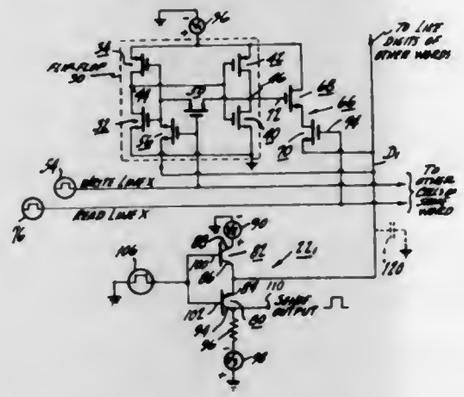
input means for producing a separate mutually-exclusively occurring cell pulse on each of said output conductors in response to each successive group of a predetermined number of successive clock pulses, whereby said successive groups form a time frame composed of a plurality of time intervals equal in number to said predetermined number and each time interval has a duration equal to a clock pulse period, each of said cell pulses having a duration equal to some plural integral number greater than a given integral number of successive time intervals; storage means having separate positions equal in number to said predetermined number, each position corresponding to a different one of said time intervals and capable of storing the binary value of a bit, whereby said storage means is divided into separate cells each of which is composed of those adjacent positions corresponding to those time intervals included within each respective cell pulse and each cell of said storage means corresponds to a different one of said input means; input control means cou-

pled to said plurality of input means, said output conductors of said pattern generator and said storage means and responsive to the presence at any of said input means of each bit of binary data for sampling the value of that bit only once and storing the value of that sample bit in the first-occurring position unoccupied by a previously stored bit of the cell corresponding to that input means at which that bit is present, and output control means coupled to said utilization means, said storage means and to said output conductors, of said pattern generator and responsive to a command signal manifesting a particular cell from said utilization means for transferring to said utilization means the stored value of the bits of binary data occupying the first given integral number of positions of said particular cell and transferring the stored value of the bit of binary data occupying each remaining position of said particular cell to a position which is said integral number of positions closer to the beginning of said particular cell.



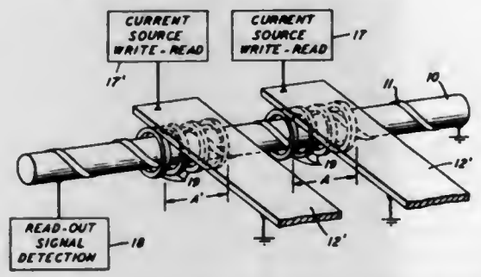
3,275,994
DATA PROCESSING SYSTEM
Earl C. Joseph, Minneapolis, Minn., assignor to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed Dec. 30, 1963, Ser. No. 334,234
9 Claims. (Cl. 340—172.5)

1. A controller for use with a digital data processing machine for directing the flow of information between said digital data processing machine and a plurality of devices to be controlled, comprising:
- memory means for storing data words and control words, said control words being comprised of at least first and second groups of binary digits;
- control register means coupled to said memory means adapted for receiving control words read out from said memory means;
- a data register coupled to said memory means and adapted for receiving data words read out from said memory;
- translating means coupled to said control register for receiving said first group of binary digits of said control words for selecting only one out of said plurality of devices to be controlled;
- a digital converter device including means for receiving input signals indicative of transmission control; criteria for converting said input criteria quantity to a digital representation thereof;



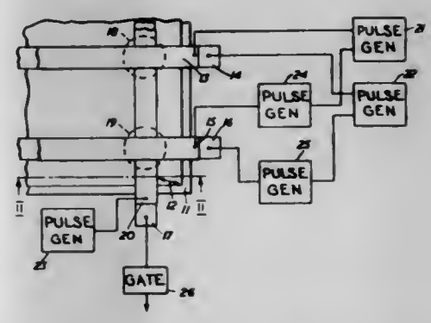
- comparator means coupled to said converter and said said control register for receiving the output signals from said converter and said second group of binary digits of said control word for producing a gating signal when the digits representing said input criteria in said converter has a predetermined relationship to said second group of binary digits; and
- means in said data register responsive to said gating signal for transmitting a data word to the device to be controlled selected by said translating means.

3,275,995
DATA HANDLING SYSTEM
Jacob J. Hagopian, San Jose, Calif., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York
Filed Dec. 23, 1963, Ser. No. 332,542
14 Claims. (Cl. 340—172.5)



1. A data transmission buffer for asynchronously recording and reproducing data comprising: means for receiving a multi-bit coded signal representative of the character, a magnetic tape having a single recording channel, a magnetic transducer connected to receive the multi-bit coded signal from the receiving means and positioned in recording relationship with the single channel on the magnetic tape, said magnetic transducer including writing means defining a plurality of recording gaps for simultaneously recording the bits of the coded signal received in parallel lengthwise on the single channel when the tape is stationary with respect to the magnetic transducer and including reading means including a single reading gap disposed in reading relationship to the tape closely adjacent one of said recording gaps, means for moving the tape at selected speeds relative to the magnetic transducer, means for restricting the movement of the tape during the recording of the multi-bit coded signal, said restricting means permitting the tape to move a single increment at one of said selected speeds after each recording of a multi-bit coded signal, the length of each increment corresponding to the distance between the reading gap and the furthest recording gap on the magnetic transducer such that the signals recorded pass the reading gap to be reproduced during the incremental movement, whereby the parallel bits representing a character are recorded in serial fashion on the tape to be later reproduced serially at different ones of the selected speeds.

3,275,996
DRIVER-SENSE CIRCUIT ARRANGEMENT
Joseph R. Burns, Trenton, N.J., assignor to Radio Corporation of America, a corporation of Delaware
Filed Dec. 30, 1965, Ser. No. 517,554
10 Claims. (Cl. 340—173)

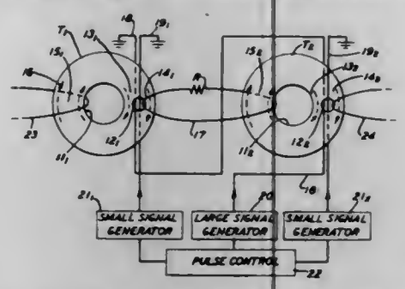


1. The combination comprising:
- a flip-flop having an input means and at least one output terminal;
- coincidence gate means having a conduction path connected at one end to a point of fixed potential, a first control electrode connected to said output terminal, and a second control electrode;
- means for applying a gating signal at said second control electrode when it is desired to sense the output of said flip-flop;
- a common input-sense line connected to both said input means and to the other end of said conduction path;
- first and second transistors of opposite conductivity type each having first and second electrodes defining the ends of a conduction path, and a control electrode, the first electrode of each transistor being connected to said common input-sense line;
- an impedance element having one terminal connected to the second electrode of the first transistor;
- means for connecting the second electrode of the second transistor and the other terminal of said impedance element to points of suitable operating potential; and
- means for applying input signals in common to the control electrodes of said first and second transistors.

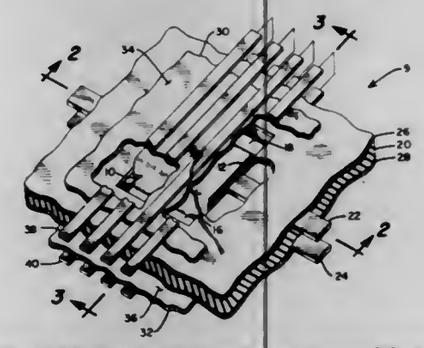
3,275,997
MAGNETIC INFORMATION STORAGE UNIT UTILIZING CONDUCTIVE RING COUPLING
Andrew H. Bobeck, Chatham, N.J., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Aug. 21, 1962, Ser. No. 218,399
13 Claims. (Cl. 340—174)

10. An information storage matrix comprising a plurality of magnetic memory elements each having a substantially rectangular hysteresis characteristic and each having a substantially helical magnetic flux carrying path established therein,
- a plurality of transverse electrical conductors inductively coupled to each of said memory elements, each of said electrical conductors defining an address segment on each of said magnetic conductors,
- at least one highly conductive ring encircling said magnetic memory elements at each of said address segments,
- means for selectively applying an energizing pulse to particular ones of said plurality of magnetic memory elements, and
- means for selectively applying an energizing pulse to particular ones of said plurality of electrical conductors.

3,275,998
THIN FILM MAGNETIC MEMORY MATRIX
Peter Istvan Bonyhard, St. Albans, England, assignor to International Computers and Tabulators Limited
Filed Sept. 17, 1962, Ser. No. 223,928
Claims priority, application Great Britain, Sept. 22, 1961, 34,010/61
8 Claims. (Cl. 340—174)



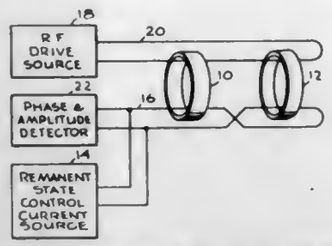
1. A magnetic device, including a storage element comprising first and second like areas of ferromagnetic thin film each having an easy axis of magnetization and each being switchable between first and second opposite stable states of magnetization along said easy axis, said element having a first stable condition in which both said areas are in said first stable state and a second stable condition in which both said areas are in said second stable state; a sense conductor magnetically coupled to both said areas; first and second drive means coupled to said first and second areas, respectively, for applying to said areas magnetic fields substantially perpendicular to said sense conductor; first and second current pulse generating means operative to energise said first and second drive means, respectively, to drive said areas towards the same magnetic state, said second generating means being operative in coincidence with termination of operation of said first generating means; and means responsive to signals induced in said sense conductor at said termination to produce a predetermined output signal only when both said areas are driven from said first stable state.



3,275,999
MAGNETIC STORAGE AND TRANSFER CIRCUITS
George W. Dick, Morris Township, Morris County, N.J., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Dec. 31, 1962, Ser. No. 248,457
5 Claims. (Cl. 340—174)

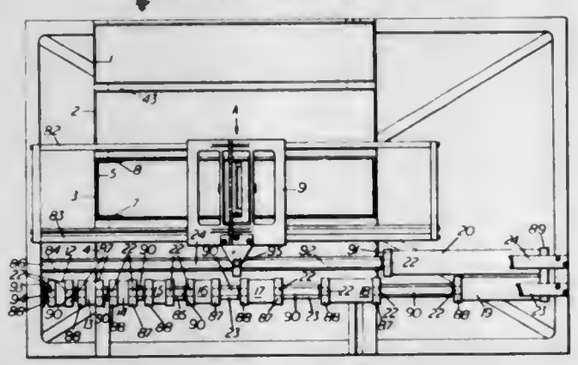
1. An information transfer circuit comprising a first and second transfluxor each being apertured to form therein input and output legs, said input and output legs each completing a major flux path in its transfluxor and said output leg also completing a minor flux path in its transfluxor shorter than said major flux path, and means

for incrementally driving the input leg of said second transfluxor to a remanent magnetic state comprising a coupling loop for coupling the output leg of said first transfluxor and the input leg of said second transfluxor by unity turns ratio windings, winding means coupled to the output leg of said first transfluxor, and means for alternately applying to said winding means first and second pulses repeatedly to switch said last mentioned output leg, said first pulses being of a magnitude to switch at a first rate of flux change said output leg around only said minor flux path and said second pulses being of a magnitude to switch said output leg at a second greater rate of flux change.



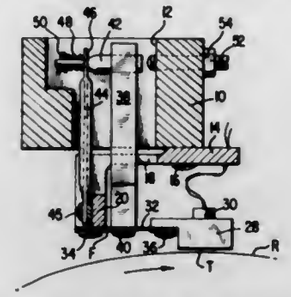
3,276,000
MEMORY DEVICE AND METHOD
William W. Davis, Minneapolis, Minn., assignor to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed Jan. 30, 1963, Ser. No. 254,913
8 Claims. (Cl. 340—174)

1. A multi-bit memory apparatus comprising:
a non-magnetizable base member;
a tubular memory element of magnetizable material defined by a web formed by two spaced-apart apertures in said non-magnetizable base member;
a plurality of pairs of printed circuit conductors;
a separate, discrete circumferential area of said element sandwiched between and substantially magnetically coupled to only a separate pair of said printed circuit conductors;
each of said areas defining a separate one of said multi-bits.



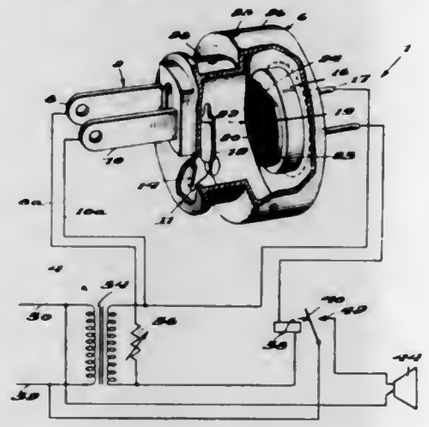
3,276,001
MAGNETIC ANALOG DEVICE
Harold S. Crafts, Palo Alto, Calif., assignor to Research Corporation, New York, N.Y., a corporation of New York
Filed Feb. 8, 1963, Ser. No. 257,203
18 Claims. (Cl. 340—174)

1. A magnetic device comprising magnetic means having a substantially zero flux state and a plurality of opposite remanent flux states on either side of said zero flux state, first winding means coupled to said magnetic means for placing it in a predetermined one of said plurality of opposite remanent flux states, second winding means for applying an excitation to said magnetic means having a predetermined fundamental oscillation frequency and having an amplitude less than that required to alter the remanent flux state of said magnetic means, and detector means coupled to said second winding means and solely responsive to excitation applied by said means for applying excitation for detecting a signal having



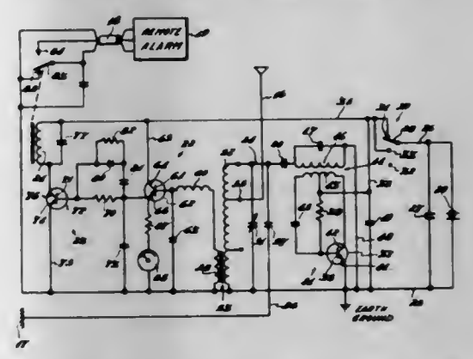
a different frequency than said fundamental oscillation frequency and having an amplitude and phase representative of the location of said predetermined remanent flux state with respect to said zero flux state.

3,276,002
CARD STORAGE AND INFORMATION RETRIEVAL APPARATUS
John Handley, Little Marland, Briar Hill, Purley, Surrey, England
Filed Oct. 4, 1960, Ser. No. 60,395
4 Claims. (Cl. 340—174.1)



1. In an electro-mechanical storage apparatus where information is stored on relatively thin stiff cards stored side by side in spaced relation in containers of substantially the height of the cards disposed in parallel array with each card having a number of parallel tracks of information recorded thereon, said apparatus including a carriage mounted on guides for movement adjacent to said containers, extraction and return means mounted on the carriage for movement along a line intersecting the plane of a card in a container toward and away from the card, carriage power means connected to the carriage for moving the carriage across the edges of cards in a container, extraction and return power means connected to the extraction and return means for moving the latter, and track reading means mounted on the carriage and adjacent to a plane including said line, the improvement comprising: said extraction and return means including two pairs of forceps-like grippers spaced from each other a distance less than the width of a card along a line parallel thereto, means for closing said grippers into clamping engagement with a card after movement toward said card in the plane thereof, and control means connected to said power means to move said carriage to position the grippers in the plane of a single selected card only, to move said grippers from an open condition into gripping engagement with said selected card, to move the grippers in said plane away from the container thereby carrying only a portion of the card out of the container and past said reading means during which movement the card is read, and thereafter returning the card to stored position in the container, opening the grippers, and returning the grippers to normal position away from the card.

3,276,003
AIR BEARING MAGNETIC HEAD MOUNTING ASSEMBLY
Richard A. Stover, Perkinsville, Vt., assignor to Vermont Research Corporation
Filed Aug. 6, 1963, Ser. No. 300,258
8 Claims. (Cl. 340—174.1)

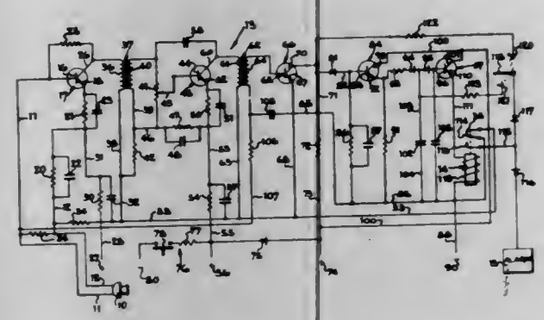


1. A magnetic head mounting assembly of the type wherein magnetic heads are adapted to ride on a hydrodynamically created layer of air adhering to the surface of a rapidly rotating magnetic drum, the assembly comprising:
(a) a plurality of side by side magnetic heads,
(b) a pad member mounting the heads,
(c) a support bar fixedly supported and spaced from the pad member,
(d) a deflection member having one end secured to the support bar,
(e) a single reed spring having one end secured to the pad member and the other end secured to the other end of the deflection member, and
(f) a pair of screw means each threadably engaged in the support bar and the deflection member adjacent the ends thereof for twisting and deflecting the latter to thereby adjust the spacing between ends of the pad member and the magnetic drum and also for initially setting a drop distance between the pad member and the magnetic drum.

3,276,004
APPARATUS FOR DETECTING GAS
Edmund S. Mayo, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Apr. 29, 1963, Ser. No. 276,404
2 Claims. (Cl. 340—237)

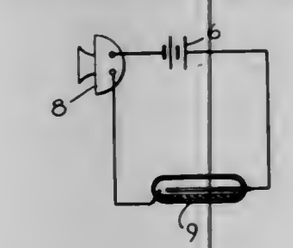
1. Gas detection apparatus comprising a housing, a module of reagent mounted within said housing, said reagent being color sensitive to the presence of at least one particular gas, said housing having openings to permit atmosphere containing said particular gas to enter and contact said reagent, means to regulate the humidity within said housing, photoelectric means including a lamp and a photodetector positioned within said housing to receive light from said lamp after incidence upon said reagent, whereby color changes of said reagent caused by the presence of said particular gas are sensed by said photodetector, the heat of said lamp serving to convect the surroundnig atmosphere through said housing via said openings therein, and electric means powering said photoelectric means and including an alarm responsive to said photodetector to signal the presence of a predetermined concentrations of said particular gas.

3,276,005
CAPACITY INTRUDER ALARM HAVING CAPACITIVE A.C. COUPLING AND D.C. BIAS COUPLING IN PARALLEL BETWEEN A DETECTOR AND AMPLIFIER
Eric G. Quist, Roxbury, Conn., and Richard H. Geis, Hopewell Junction, N.Y., assignors to Mosler Research Products, Inc., Danbury, Conn., a corporation of Delaware
Filed May 5, 1964, Ser. No. 365,034
7 Claims. (Cl. 340—258)



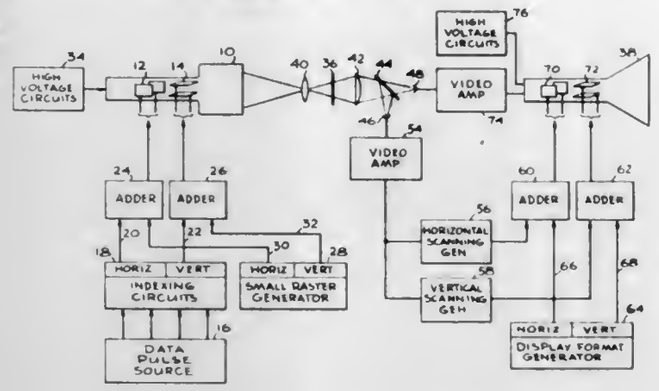
7. A capacity alarm system comprising an oscillator, a tuned resonant circuit connected to said oscillator, said resonant circuit including antenna means and an inductive winding, a first transistor connected to said inductive winding for sensing changes in capacitance in said tuned resonant antenna circuit, said transistor including a collector having a D.C. potential in variable response to said change in capacitance, a second transistor for controlling actuation of an alarm, and fail-safe circuit means interconnecting said first transistor and said second transistor, said fail-safe circuit comprising a resistor interconnecting said collector and said second transistor to provide a D.C. operating bias for said second transistor, and parallel circuit means including a capacitor and series connected sensitivity resistor effective to cause current flow in a reverse direction to said second transistor in response to an increase in capacity in said resonant circuit and a decrease in potential of said collector, and a diode shunting said sensitivity resistor, said diode being connected to provide a high impedance path to current discharged by said capacitor.

3,276,006
AUDIO ACCUMULATOR
Donald E. Hansen, Brookfield Center, Conn., assignor to Mosler Research Products, Inc., Danbury, Conn., a corporation of Delaware
Filed Feb. 27, 1964, Ser. No. 347,761
1 Claim. (Cl. 340—261)



In an alarm system including an audio or vibration pickup effective to produce an electrical signal and alarm means, the combination of a detector for said electrical signal, a buffer transistor connected to said detector, an audio amplifier transistor including a base and an emitter, a series circuit comprising an integrator resistor, and first and second rectifiers for conducting current in one direction interconnecting said detector and the base of said audio amplifier transistor, an integrator capacitor for receiving a charge through said first diode interconnected between the junction of said first and second rectifiers and a reference potential, a second capacitor connected

intermediate said second rectifier and the base of said amplifier transistor for receiving a charge through said second diode, a relay including a winding interconnected to the emitter of said amplifier transistor, said relay having first and second stationary contacts and a movable contact connected to said reference potential, said movable contact being in engagement with said first contact when said relay is deenergized and being in engagement with said second contact when said relay is energized, a second resistor connected to the junction of the first and second rectifiers for regulating the discharge of said in-



tegrator capacitor at a first rate, a selectively operable switch effective to interconnect said second resistor to the second contact of said relay, said second capacitor having a discharge circuit through said amplifier emitter for discharging therethrough at a second rate slower than the rate of discharge of said integrator capacitor, whereby when said selectively operable switch interconnects said second resistor and second relay contact and said relay is energized, said integrator capacitor is fully discharged prior to the discharge of said second capacitor and deenergization of said relay.

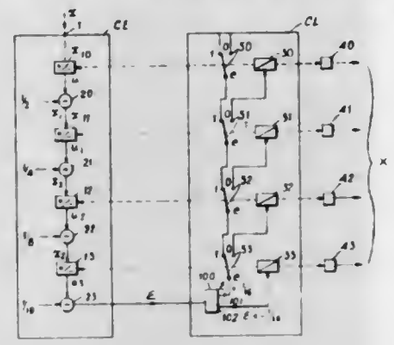
3,276,007
SWIMMING POOL FLOAT-ALARM
Edward P. White, 12 Walnut Place, Massapequa, N.Y.
Filed June 30, 1964, Ser. No. 379,303
3 Claims. (Cl. 340—261)

1. A self-contained swimming pool float-alarm comprising a permanently closed, disc-shaped, hollow float body having on the upper side a centrally disposed protrusion presenting an upstanding cylindrical side wall in spaced relation with respect to the margin of said float body, a cup-shaped circuit support member disposed in inverted relation with respect to said float body with the inner surface of the side wall thereof in frictional slidable engagement with the side wall of said protrusion, an alarm circuit attached to the bottom portion of said cup-shaped circuit support, said alarm circuit comprising a battery for providing electric power, an electrically-actuated alarm and a circuit for actuating said alarm from said battery, said circuit including a tilt-actuated switch that normally is maintained in open position and that is adapted and arranged to become closed to complete said circuit when said float body is tilted, and a cup-shaped cover overlying said alarm circuit in inverted relation thereto, with the inner surface of the side wall thereof in frictional slidable engagement with the exterior of the side wall of said cup-shaped alarm circuit support.

3,276,008
CHARACTER ALIGNMENT AND PROPORTIONAL SPACING SYSTEM
Markvard Hauerbach, Mountain View, Calif., assignor to A. B. Dick Company, Chicago, Ill., a corporation of Illinois
Filed Aug. 8, 1963, Ser. No. 300,738
9 Claims. (Cl. 340—324)

4. A character display system including a target having a plurality of regions thereon, each of said regions including a first transparent character identity information area having the shape of a character to be displayed and a second transparent character position information area; said first and second areas respectively being of complementary colors; a flying spot scanner including means for producing a light spot and moving said light spot to generate a raster; means for deflecting said light spot to cause it to be incident on one of said regions; dichroic means; means positioning said flying spot scanner with respect to said target and said dichroic means relative to one another for enabling said light spot to be transmitted through said transparent areas of said one of said regions and be incident on said dichroic means; first and second light sensitive means respectively responsive to light transmitted through and reflected from said dichroic means for developing electrical signals representing said character identity and character position information; a display cathode ray tube having a display face; means for generating an electron beam in said display cathode ray tube; means for deflecting said display cathode ray tube electron beam to a selected position on said display face; generator means for causing said display cathode ray tube electron beam to scan said selected position; means responsive to said electrical signal representing said character position information for actuating said generator means; and means for controlling said display cathode ray tube electron beam in response to said electrical signal representing said character identity information.

3,276,009
ANALOG-TO-DIGITAL CONVERTERS
Etienne Honoré and Emile Torcheux, Paris, France, assignors to C.S.F.-Compagnie Generale de Telegraphie Sans Fil, a corporation of France, and Societe Marocaine de Recherches d'Etudes et de Developpements, "Somarede," a corporation of Morocco
Filed Jan. 29, 1963, Ser. No. 254,657
Claims priority, application France, Jan. 31, 1962, 886,465
10 Claims. (Cl. 340—347)

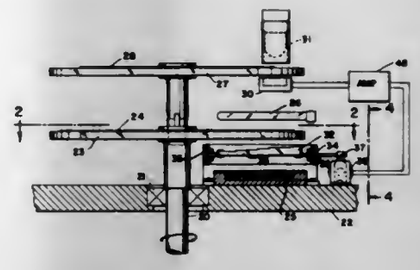


3. A system for converting an analog value x, comprised between $-K$ and $+K$, into a digital value x, including: means for comparing said analog value to a sum S thus providing a value $x-S$, said system comprising: a general input for receiving a voltage proportional to said analog value; a first and a second threshold device, having an input for receiving respectively a voltage ϵ, analog to $K-S$, and a second voltage ϵ, analog to $K-S$, and a second voltage ϵ_2 and two outputs, respectively delivering pulses, when

$$\epsilon < -\frac{1}{2^n} \text{ or } \epsilon > \frac{1}{2^n}$$

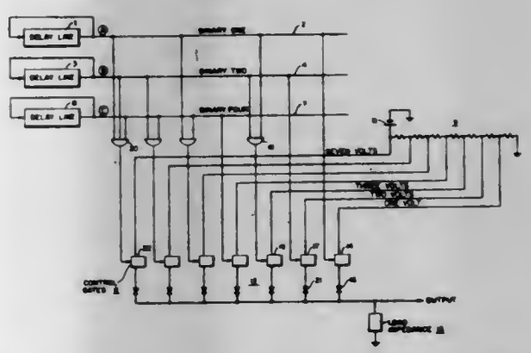
and

$$\epsilon < -\frac{1}{2^n - q} \text{ or } \epsilon > 2^n - q$$



$n-q$ stages, cascade connected between said general input and said input of said second threshold device and q stages cascade connected between said $n-q$ stages and said input of said first threshold device, said stages respectively comprising a polarity inverter having a polarity inverting position and a polarity non inverting position, an input and an output, and a subtracting cell, having a first input, connected to said output of said inverter, and a second input for receiving a voltage analog to $K/2^j$, j being equal to $1 \ldots n$; n flip-flop devices having a first

and a second steady state, and a control input for receiving pulses, tripping them, from one state to the other; respective means for putting said polarity inverters in said first or in said second position, according to whether said flip-flop devices are respectively in said first or in said second state; a first and a second cascade of respectively q and $n-q$ switches, respectively associated with q and $n-q$ of said flip-flop devices having respectively one input and a first and a second output; means controlled by said associated flip-flop devices for selectively connecting said first or said second outputs to said input of said switch according to whether said associated flip-flop is in said first or in said second state; the first switch in each cascade, and the associated flip-flop, having inputs respectively connected to said first and said second output of said first and said second threshold device, said first output of said switch being connected to the input of the switches following it in said cascade, and said second output to said input of the flip-flop associated to said following switch.



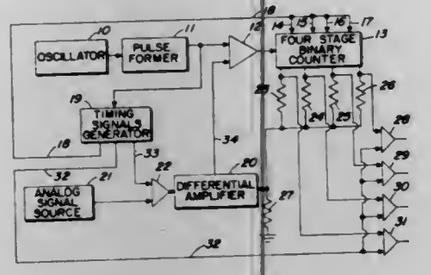
3,276,010
METHOD AND MEANS FOR CORRECTING OUTPUT INDICATIONS OF AN ENCODER
Garrard Mountjoy, Little Rock, Ark., assignor to Baldwin Electronics, Inc., Little Rock, Ark., a corporation of Arkansas
Filed July 30, 1963, Ser. No. 298,645
11 Claims. (Cl. 340—347)

1. In an analog to digital encoder having an encoding disc mounted on a shaft the angular position of which is to be indicated in digital form, the digital indication being subject to error resulting from lack of precision of mechanical components of the system; means for compensating for such lack of precision, comprising in combination, a compensating member mounted on the encoder shaft for rotation therewith, said member having embodied therein a curve representing the error compensation at spaced points in a shaft revolution, and means controlled by said compensating means for modifying the

indication to compensate for error and assure a correct indication at all points in a shaft and encoder disc cycle.

3,276,011
DIGITAL-TO-ANALOG CONVERTER
Uwe A. Pommerening, Webster, N.Y., assignor to General Dynamics Corporation, a corporation of Delaware
Filed Nov. 8, 1963, Ser. No. 322,374
7 Claims. (Cl. 340—347)

1. A digital-to-analog converter comprising a plurality of conductors, means for marking various ones of said first plurality of conductors in accordance with a binary code, a plurality of control gates each having an input terminal, an output terminal and a control terminal, means coupled between said plurality of conductors and the control terminals of said control gates to enable various ones of said control gates depending upon the binary code impressed upon said plurality of conductors, means for providing a plurality of different voltage levels each associated with a different one of said control gates, means for applying each of said voltage levels to the input terminal of its associated control gate, an output impedance, and means coupled between the output terminals of said control gates and said output impedance for causing current to flow through said output impedance and that one enabled control gate associated with the highest voltage level compared to the levels associated with other enabled control gates and for preventing current from flowing through any other enabled or disenabled control gate.



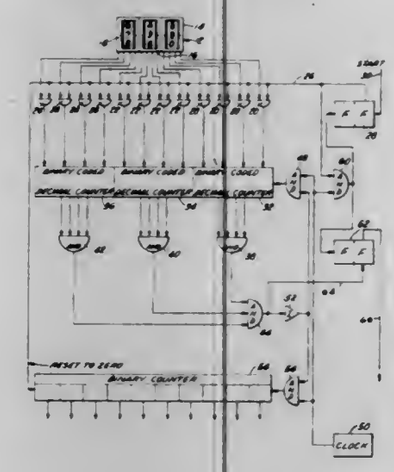
3,276,012
ANALOG-TO-DIGITAL CONVERTER
Frank Secretan, Santa Ana, Calif., assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Filed Dec. 26, 1963, Ser. No. 333,314
7 Claims. (Cl. 340—347)

1. Analog-to-digital converting means for converting an analog signal to a digital signal and comprising:
counter means having input means and a plurality of stages;
pulse forming means for generating a continuous supply of pulses;

first gating means constructed when opened, to supply pulses from said pulse forming means to said counter means,

first impedance means responsive to the condition of each stage of said counter means to produce first signals representative of the condition of the stages of said counter means,

second impedance means responsive to the signals produced by said first impedance means to produce a second signal representative of the total count contained in said counter means,



signal comparing means responsive to the said second signal and to said analog signal to produce an output signal having a first characteristic when the ratio of the magnitude of said analog signal to the magnitude of said second signal exceeds a predetermined value, and to produce an output signal having a second characteristic when the ratio of the magnitude of said second signal to said analog signal exceeds a predetermined value,

said first gating means responsive to the signal comparing means output signal having said first characteristic to become opened;

and control means for supplying said analog signal to said signal comparing means at regularly spaced time intervals and to clear said counter means prior to each of said time intervals.

3,276,013
DECIMAL TO BINARY CONVERTER
Gerald F. Chandler, La Mesa, Calif., assignor to Cohu Electronics, Inc., San Diego, Calif., a corporation of Delaware
Filed Feb. 19, 1964, Ser. No. 345,872
18 Claims. (Cl. 340—347)

13. A decimal to binary converter comprising:

means for manually setting a multi-digit decimal number;

a pluraliy of multi-stage binary coded decimal counters;

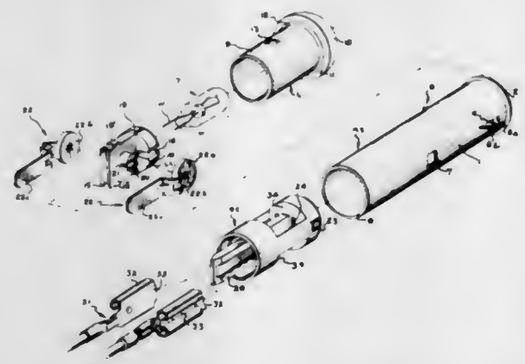
a source of pulses;

a binary counter;

first gating means coupling said source of pulses to said binary coded decimal counters, said gating means being operable to permit said pulses to count down the binary coded decimal number stored in said counters;

second gating means coupling said source of pulses to said binary counter, said gating means being operable to permit said binary counter to count said pulses;

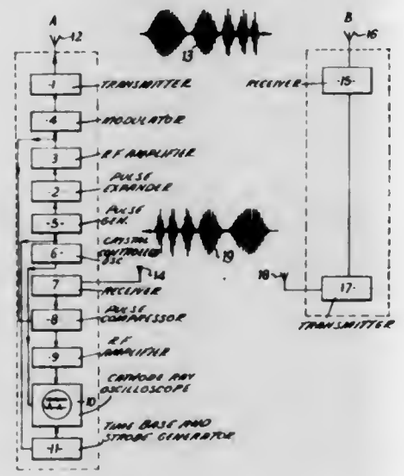
a plurality of coincidence circuits, each of said circuits having its inputs coupled to each stage of one of said counters whereby each of said circuits produces an output signal when there is no number stored in its respective counter;



an AND gate having a plurality of inputs coupled to the ouputs of said coincidence circuits for producing an output signal in response to the production of an output signal by each of said coincidence circuits;

means coupling said AND gate to said first and second gating means whereby said gating means are rendered operative when no output signal is produced by said AND gate and inoperative when an output signal is produced by said AND gate;

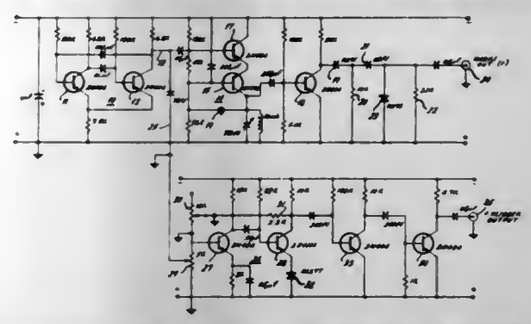
third gating means operable to couple each of said binary coded decimal counters to said setting means whereby each of said counters converts and stores a single digit of said decimal number; and



pulse producing means coupled to said third gating means and to said binary counter for operating said third gating means and resetting said binary counter to zero.

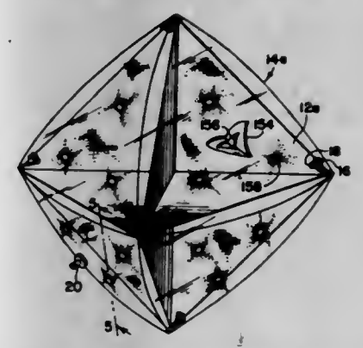
3,276,014
HOUSING FOR INDICATING LAMP OR OTHER ELECTRICAL COMPONENTS
Herman Rueger, Lancaster, Pa., assignor to AMP Incorporated, Harrisburg, Pa.
Filed Nov. 29, 1963, Ser. No. 326,955
9 Claims. (Cl. 340—381)

1. A signal structure to be mounted in an apertured panel, said structure containing a pilot lamp with electrical leads, a hollow tubular housing of insulating material, flange means on one end of said tubular housing, integral resilient fin-like means on said tubular housing spaced from said flange means, said fin-like means being flexible to pass through an aperture to clamp the flange means of said tubular housing against a panel, a lamp-protecting means adapted to be removably mounted in said tubular housing in which said pilot lamp is disposed, said lamp-protecting means having a light-transmitting portion extending outwardly from said flange means when said lamp-protecting means is disposed in said tubular housing, connector-carrier means in said lamp-protecting means carrying connector means, said electrical leads connected to said connector means, and terminal-carrier means including terminal means removably mounted thereon, said terminal-carrier means removably mounted in said tubular housing and being spaced from said flange means, said terminal means being engageable with said connector means when said lamp-protecting means is disposed within said tubular housing.



3,276,015
METHODS OF AND APPARATUS FOR MEASURING DISTANCES
William Edward Lerwill, Keston, Kent, and Nigel Allister Anstey, Chelsfield, Kent, England, assignors to Seismograph Service Corporation, Tulsa, Okla.
Filed May 1, 1963, Ser. No. 277,278
Claims priority, application Great Britain, May 8, 1962, 17,628/62
13 Claims. (Cl. 343—6.5)

1. Interrogator apparatus for use in conjunction with a responder in a system employed for measuring distances, said apparatus comprising means for generating a pulse, means for expanding said pulse in order to produce an expanded pulse having a characteristic which varies according to a predetermined non-repetitive pattern, means for transmitting a first signal derived at least in part from said expanded pulse for reception by the responder to cause the latter to transmit a return signal having a characteristic pattern related to that of said first signal, means for compressing said return signal as received by said interrogator said compressing means including means for cross correlating said return signal with a pattern representing at least a portion of the expanded pulse and comprising a magnetostrictive member, input transducer means responsive to said return signal and coupled to said member to produce strains therein, and means including output transducer means coupled to said member for developing a compressed return signal, at least one of said transducer means being adjustable along said member to compensate for phase shifts, and means responsive to the time interval between said pulse and the resulting compressed return signal for measuring the distance between said interrogator and said responder.



3,276,016
APPARATUS FOR THE CALIBRATION OF RADAR EQUIPMENT
Harvey M. Knickerbocker, National City, Calif., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Delaware
Filed Sept. 3, 1964. Ser. No. 394,240
12 Claims. (Cl. 343—17.7)

1. Apparatus for the calibration of radar equipment, comprising a source of control signal, a crystal oscillator, means for pulsing said oscillator in response to said control signal, means for processing the output of said oscillator to form mark pulses, a one-shot multi-

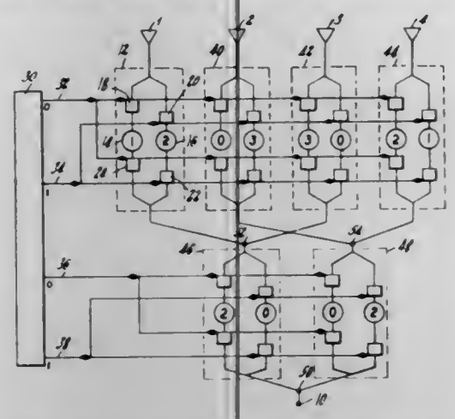
vibrator coupled to said source to be driven thereby, and means for processing the output of said one-shot multivibrator to form a trigger pulse.

3,276,017
INFLATABLE SUPPORT STRUCTURE
Doyle D. Mullin, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
Filed Oct. 18, 1961, Ser. No. 145,832
3 Claims. (Cl. 343—18)

2. A radar reflector unit comprising corner reflector having a plurality of three-sided reflecting components connected together to form a plurality of inner apices, means for supporting said reflector comprising a container which includes first and second layers of material, means for connecting said layers together at a plurality of points, inlet means for filling the space between the two layers with an inflation medium, the container when inflated forming a multi-sided structure having a plurality of plane surfaces which intersect with each other to form a plurality of triangles having straight edges, and means for attaching the reflector within the container.

3,276,018
PHASE CONTROL ARRANGEMENTS FOR A MULTIPORT SYSTEM
Jesse L. Butler, Groton Road, R.F.D. 2, Nashua, N.H.
Filed May 8, 1963, Ser. No. 278,854
17 Claims. (Cl. 343—100)

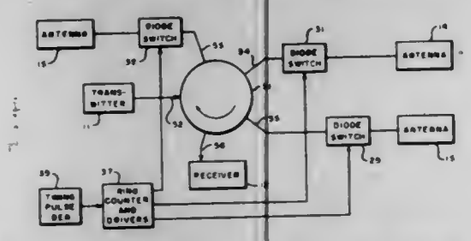
12. A digitally responsive phase control system comprising a plurality of phase control modules,



each said phase control module having an input, an output, and N branches where N is the radix of digital control,

each said branch including a fixed phase shifter,

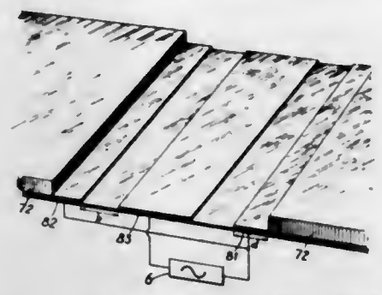
said phase shifters being arranged so that one set of corresponding branches in said phase modules imposes a phase gradient ϕ on the signal transmitted through said phase modules,



and another set of corresponding branches imposes a phase gradient of $K\phi$ on the signal transmitted through said phase modules where K is an integer, said one set imposing a phase gradient that is inversely related to the phase gradient imposed by said another set,

and means responsive to digital control to connect all the phase shifters in one set in circuit between said module inputs and said module outputs in accord-

ance with the value of the control to impose a predetermined phase gradient as a function of the control on the signal transmitted through said modules.



3,276,019
COMBINED SEQUENTIAL BEAM SWITCHER AND DUPLEXER USING MICROWAVE CIRCULATORS
John D. Fackler, Bedford, N.Y., assignor to General Precision, Inc., a corporation of Delaware
Filed Feb. 11, 1964, Ser. No. 344,045
3 Claims. (Cl. 343—175)

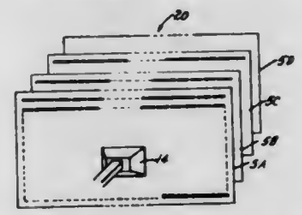
1. A combined duplexer and switching system, comprising,
- microwave energy circulating means including a plurality of external connection arms for transmitting microwave energy entering any arm through a portion of said means in a predetermined direction and out by the next succeeding arm,
- a source of microwave energy connected to one of said arms,
- a plurality of antennas connected to successive arms next adjacent to said one arm,
- a receiver connected to that arm most remote from said source,
- a plurality of radio frequency diode switches one interposed between each antenna and said circulating means,
- said switches each being selectively actuable to be conductive or reflective to incident microwave energy, and
- cyclically operating means for rendering each switch in succession conductive and the remainder of said switches reflective.

3,276,020
LOW PROFILE SURFACE WAVE ANTENNA
Henry Maillet, Paris, France, assignor to Compagnie Generale de Telegraphie Sans Fil, a corporation of France
Filed June 7, 1961, Ser. No. 116,659
Claims priority, application France, June 17, 1960, 830,269
1 Claim. (Cl. 343—705)

A device for radiating ultra high frequency energy comprising: a first and a second transmission line parallel to each other; said first line comprising a first conductive strip, having a thickness small relatively to the operating wavelength, extending in a predetermined direction, and having two parallel sides, two infinite and conductive first planes, respectively extending along said sides and separated therefrom by respective gaps, means fo rcoupling an ultra high frequency source to said line for

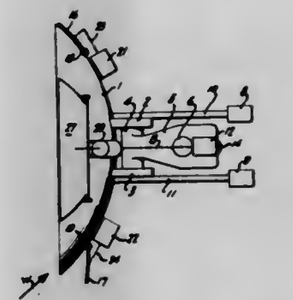
creating electromagnetic fields in said gaps; said second transmission line comprising two second strips of a dielectric material, respectively supported on said first planes, at the same distance from said gaps, said first strip and said second strips having the same length equal to $\pi/2c$, c being the coupling coefficient between said two lines.

3,276,021
TELESCOPIC AERIAL FOR AUTOMOTIVE VEHICLES
Georg Horndasch, Esslingen (Neckar), Germany, assignor to Hans Kolbe and Hans Koehler, trading as fuba, Antennenwerke, Hans Kolbe & Co., Bad Salzdetfurth, Germany
Filed May 21, 1963, Ser. No. 281,998
Claims priority, application Germany, May 29, 1962, F 36,923
2 Claims. (Cl. 343—715)



1. A telescopic aerial for mounting on the coach-work of an automotive vehicle, comprising a telescopic mast adapted to pass through a substantially elliptical opening in said coach-work and having a major longitudinal dimension and a minor transverse dimension, said coach-work being inclined with reference to a plane normal to the axis of said mast; a foot at the base of said mast likewise adapted to pass through said opening and comprising a cylindrical first section nearer to said base of said mast and having a cross section corresponding to said minor transverse dimension, and a second section farther from said base of said mast and forming a continuation of said first section, said second section having a cross section other than circular so as to project beyond said first section in two diametrically opposite directions transversely of the axis of said first section and thereby providing a pair of diametrically opposite shoulder-like extensions adapted to be supported against the inner face of said coach-work and provided with abutment faces inclined in a manner and to a degree corresponding to the inclination of said coach-work, said abutment faces being adapted to abut said inner face of said coach-work so that said foot may be inserted through said opening from the outer face of said coach-work, said mast comprising a plurality of telescopable sections including an outermost section of maximum diameter in which the other sections are receivable, and said foot comprising a guide sleeve provided therewithin in which said outermost section is receivable so that the entire mast, including said outermost section, can be telescoped into said foot; and a transmission cable electrically connected with said mast and depending from said second section of said foot axially offset from said mast whereby to prevent interference of said cable with insertion of said second section through the elliptical opening.

3,276,022
DUAL FREQUENCY GREGORIAN-NEWTONIAN ANTENNA SYSTEM WITH NEWTONIAN FEED LOCATED AT COMMON FOCUS OF PARABOLIC MAIN DISH AND ELLIPSOIDAL SUB-DISH
John E. Brunner, Hamilton, Ohio, assignor to Aeronca Manufacturing Corporation, Middletown, Ohio, a corporation of Ohio
Filed May 13, 1964, Ser. No. 366,965
6 Claims. (Cl. 343—727)



1. An antenna system for simultaneously operating at two frequencies, said antenna system comprising a single paraboloidal main reflector having an axis and a focus located on said axis, an elliposidal sub-reflector having a continuous surface and having one focus coincident with said paraboloidal focus and having a second focus located on said axis, a first feed means directed toward said paraboloidal reflector, said first feed means being disposed at the focus of said paraboloidal reflector to provide a Newtonian feed, second feed means disposed on said axis at the second focus of said ellipsoid for providing a Gregorian feed, said second Gregorian feed means operating at a substantially higher frequency than said first Newtonian feed, said antenna being effective to reflect both said Gregorian feed and said Newtonian feed with substantially optic-ray performance.

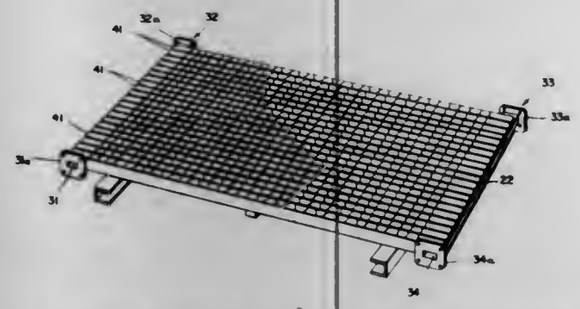
3,276,023
GRID ARRAY ANTENNA
Arthur Dorne, Seacliff, Robert G. Malech, Plainview, and Walter Satre, Jr., Bethpage, N.Y., assignors to Dorne and Margolin, Inc., Westbury, N.Y., a corporation of New York
Filed May 21, 1963, Ser. No. 281,979
19 Claims. (Cl. 343—754)

1. An array for reflecting a beam of incident radio frequency energy from a source outside of the confines of said array and changing the phase of the reflected energy with respect to the incident energy comprising a plurality of grid members for reflecting incident energy, each of said grid members having a predetermined shape, said grid members being placed in a predetermined relationship with a predetermined spacing between each grid member of the array, selected ones of said grid members having portions thereof for transmitting the incident energy therethrough, the energy transmitted through one grid member being incident on and reflected by another grid member in the array whereby the respective segments of the reflected beam of energy in front of the array have predetermined phase characteristics as determined by the grid member from which each segment was reflected.

3,276,024
ANTENNA WIND TORQUE REDUCER
Joseph W. Stevens, Menlo Park, Calif., assignor to Textron Inc., Belmont, Calif., a corporation of Rhode Island
Filed Aug. 6, 1962, Ser. No. 214,868
9 Claims. (Cl. 343—757)

2. In combination with a rotatable member carried on a pivotal mounting with drive means for rotating said member to selected angular positions, said member having a surface exposed to wind action which imposes a wind torque on said mounting, a wind torque reducer comprising:
- a vane movable on said member from a retracted position to positions extended therefrom,
- said vane when in an extended position being subjected to wind action and being positioned relative to said pivotal mounting that wind action thereagainst imposes a torque on said mounting in opposition to said wind torque,
- actuator means operative when energized to move said vane to an extended position, and
- means responsive to the presence of wind torque an said mounting for energizing said actuator means.

3,276,025
INFLATABLE DIELECTRIC TUBE ANTENNA
Kurt Ikrath, Elberon, and Wilhelm A. Schneider, Fair Haven, N.J., assignors to the United States of America as represented by the Secretary of the Army
Filed July 2, 1964, Ser. No. 380,106
8 Claims. (Cl. 343—757)



8. An inflatable directional antenna comprising, a flexible hollow tube of dielectric material fixedly attached at one end of a source of microwave radiation, a pump having an outlet communicating with the interior of said tube and a bleeder valve at the other end of said tube, said bleeder valve being directed so that the reaction of the air escaping therefrom causes said tube to move in a conical fashion.

3,276,026

DOPPLER ARRAY WITH PLURAL SLOTTED WAVEGUIDES AND FEED SWITCHING

Alan J. Simmons, Winchester, Mass., assignor, by mesne assignments, to Laboratory for Electronics, Inc., Boston, Mass., a corporation of Delaware

Filed May 10, 1962, Ser. No. 193,717
2 Claims. (Cl. 343—768)

1. A planar antenna for converting microwave energy from a source thereof into a shaped beam directed at an acute angle with respect to the radiating surface of such antenna, comprising:

(a) a parallel array of identical slotted radiating waveguides, the coupling coefficient of the radiating slots in each such waveguide varying in accordance with the following formula:

$$g(n)=\sin^2\frac{n\pi}{N+1}+D$$

where n is the number of any radiating slot from either end of the radiating waveguides toward the center thereof; N is the total number of radiating slots in any one of the radiating waveguides; and, D is a constant from 0 to about 1; and

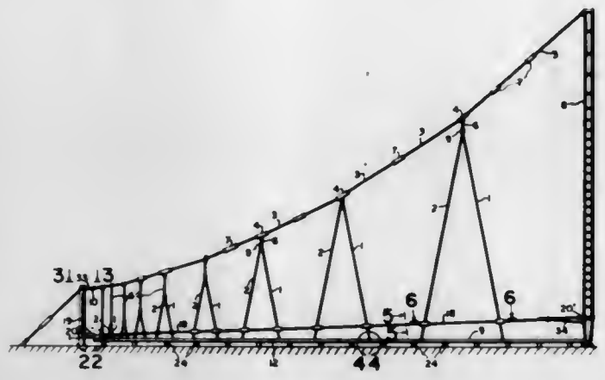
(b) coupling means for energizing the planar array with microwave energy from a source thereof, said coupling means including:

(1) a first and second waveguide parallel to each other and coupled, respectively, by coupling slots to the first and the second end of each one of the radiating guides, the coupling coefficient of each coupling slot between each of the first and the second waveguide and each one of the radiating waveguides varying in accordance with the following formula:

$$g(n')=\sin^2\frac{n'\pi}{N'+1}+D$$

where n' is the number of any coupling slot between the first and the second waveguide and a radiating waveguide from either end of the first and the second waveguide toward the center thereof; N' is the total number of radiating waveguides; and D is a constant from 0 to about 1; and

(2) means for connecting the source of microwave energy successively to the different ends of the first and the second waveguide.



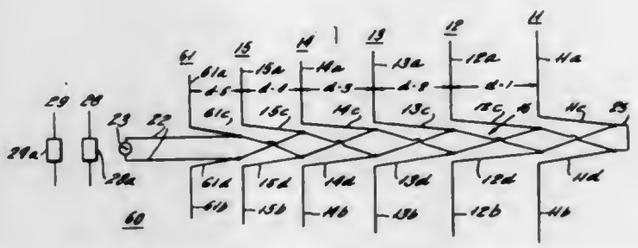
3,276,027

LOGARITHMIC PERIODIC ANTENNA

Ross L. Bell, Dallas, Tex., and William L. Werner, Sunnyvale, Calif., assignors to Granger Associates, Palo Alto, Calif., a corporation of California

Filed Aug. 7, 1962, Ser. No. 215,339
2 Claims. (Cl. 343—792.5)

1. A directional logarithmic periodic antenna having an apex adjacent the ground and comprising a series of mutually spaced triangular hollow tooth structures lying in a common vertical plane and disposed at progressively greater distances from said antenna apex, a catenary cable for supporting the upper ends of said tooth structures, each of said tooth structures comprising a pair of oppositely inclined rods forming an apex at their upper ends supported from said catenary, the dimensions of the tooth structures progressively increasing with distance from the antenna apex, a feed line extending alongside said tooth structures from said antenna apex, the height of said feed line above ground progressively increasing toward the rear of said antenna, distributive capacity members successively disposed alongside said feed line, each of said capacity members comprising a conductor having its ends



respectively connected to the rods of a respective one of said tooth structures for capacity coupling said feed line to said tooth structures, a longeron extending along the ground beneath said triangular tooth structures and having the rods of said structures attached thereto at predetermined points, and a ground screen underlying said antenna having diagonal wires crossing said longeron and connected thereto at the points of connection of the triangular tooth structure rods thereto, the free ends of said diagonal wires being grounded.

3,276,028

HIGH GAIN BACKFIRE ANTENNA ARRAY

Paul E. Mayes and Ronald D. Grant, Champaign, Ill., assignors to JFD Electronics Corporation, Brooklyn, N.Y., a corporation of New York

Filed Feb. 18, 1964, Ser. No. 345,691
13 Claims. (Cl. 343—792.5)

12. An antenna array providing high directivity values over extremely broad bands of operating frequencies comprising:

a two-wire feeder line;

a plurality of dipoles being arranged transverse to said feeder line at spaced intervals along the length thereof;

each of said dipoles being comprised of first and second elements spaced on opposite sides of said feeder line;

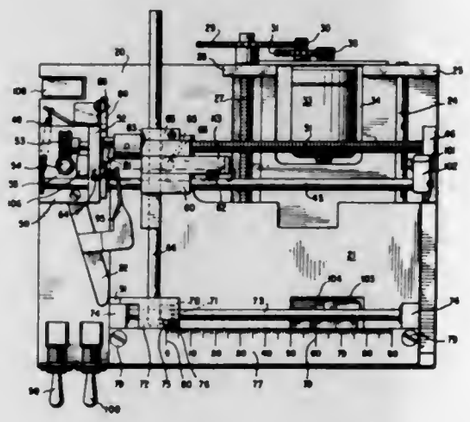
adjacent elements of said dipoles being connected to alternate sides of said feeder line;

a plurality of impedance-transforming networks each connecting an associated dipole element to said feeder line to provide maximum energy transfer between said feeder line and said elements;

said networks comprising transformer means for substantially matching the impedance of each element to the impedance of said feeder line;

said transformer means being a section of transmission line extending substantially parallel to said feeder line;

the length of each transmission line transformer means being approximately one-quarter of the length of the dipole arm to which it is connected;



the accumulated length of said first and second element of any one dipole plus the length of the transmission line transformer means connected to said first and second elements being of the order of one and one-quarter wavelength at a frequency within the operating band of the antenna array.

3,276,029

APPARATUS FOR SPEED INDICATION

Arthur Niemeyer Marshall, 5501 Kingsbury Road, Richmond, Va.

Original application Feb. 11, 1963, Ser. No. 257,378, now Patent No. 3,182,331, dated May 4, 1965. Divided and this application Apr. 23, 1965, Ser. No. 458,508
9 Claims. (Cl. 346—18)

1. Apparatus for use upon a motor vehicle for checking the speed of another vehicle comprising a first carriage means having linear movement from a zero position representative of elapsed time, a second carriage means having linear movement from a zero position representative of distance traveled, control means for selectively setting into advancing motion and stopping said first and second carriage means beyond their respective zero positions to establish the average speed of said another vehicle, speed indicator means connected with said first and second carriage means and having its speed indicating position determined by the stopped positions of said first and second carriage means, return means for retracting said first and second carriage means to a position behind their respective zero positions, reset means responsive to the presence of said first and second carriage means behind their respective zero positions to advance said first and second carriage means to their respective zero positions.

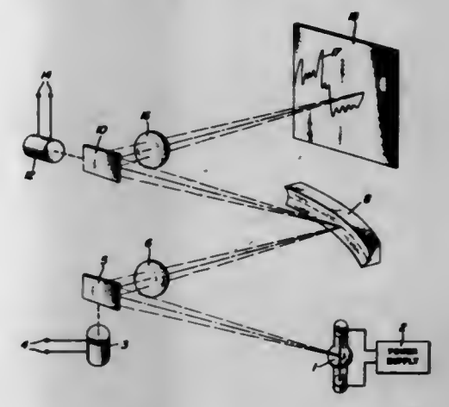
3,276,030

ELECTRICAL APPARATUS

Norman L. Stauffer, Englewood, Colo., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware

Filed Mar. 23, 1965, Ser. No. 442,014
4 Claims. (Cl. 346—29)

1. A two axis recorder comprising a first mirror arranged to be driven about an axis by a first input signal, a source of recording radiation arranged to illuminate said mirror, a second mirror arranged to be driven about an axis by a second input signal, said axes arranged at right angles to each other, a spherical reflector arranged to intercept radiation reflected from said first mirror, lens means arranged for forming a first focused image of said source of recording radiation upon the surface of said spherical reflector, said spherical reflector being operably arranged for continuously reflecting said first focused image of said recording radiation as said image is transversely displaced across the surface thereof by the motion of said first mirror about its axis, said spherical reflector being further arranged for reflecting said first focused



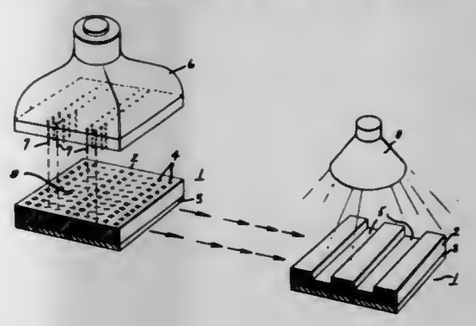


image toward said second mirror, a recording means arranged to intercept radiation reflected from said second mirror, and second lens means arranged to focus said first focused image upon said recording means forming a second focused image thereon, whereby said motion of said first mirror imparts a transverse motion to said first focused image upon said spherical reflector for reflection upon said second mirror and therefrom to said recording means for producing a transvesely moving second focused image thereon and said motion of said second mirror imparts an independent longitudinal displacement to said transversely moving second focused image for forming an X–Y recording on said recording means.

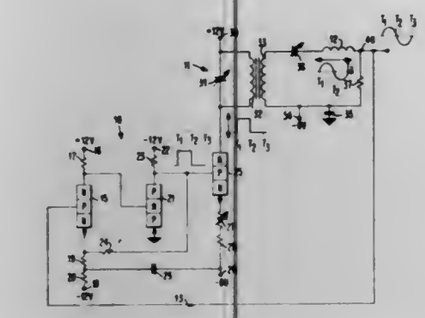
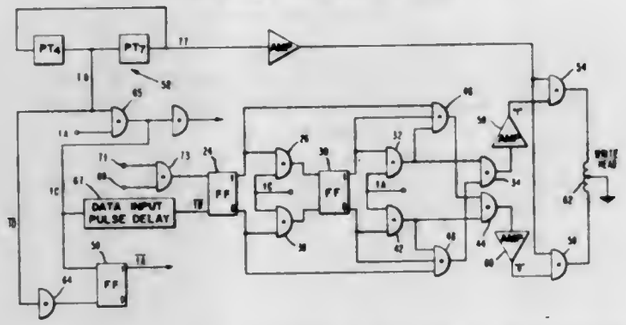
3,276,031

THERMOPLASTIC INFORMATION RECORDING UTILIZING ELECTRETS



Joseph Gaynor, Schenectady, N.Y., assignor to General Electric Company, a corporation of New York

Filed Jan. 14, 1963, Ser. No. 251,370
9 Claims. (Cl. 346—74)



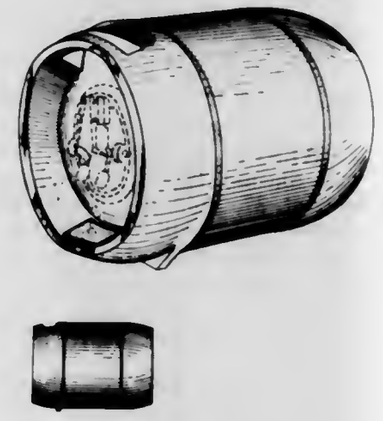
1. A method for recording information in the form of light-modifying deformations on the surface of a recording member which comprises selectively neutralizing a supported volume-polarized thermoplastic electret layer in an image pattern of the information being recorded, and heating the selectively neutralized electret layer to produce deformations corresponding to the image pattern.

3,276,032
OSCILLATOR DRIVING A RESONANT CIRCUIT WITH A SQUARE WAVE AND HAVING NEGATIVE FEEDBACK
Robert Ordower, Vestal, N.Y., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York
Filed Sept. 17, 1964, Ser. No. 397,222
3 Claims. (Cl. 346—74)

1. An astable drive circuit for the magnetic write head of magnetic character reader-sorter apparatus, said circuit comprising
a first inverting transistor amplifier operated class A during stable operation of the drive circuit and having a first output;
a common emitter transistor amplifier having a second output and operated between cutoff and saturation during stable operation of the drive circuit in response to signals at the first output;
means providing negative feedback between the second output and the first amplifier;
a third common emitter transistor amplifier having an output circuit connected to the resonant circuit and operated between cutoff and saturation during stable operation of the oscillator in response to signals at the second output;
a resonant circuit including
a first capacitor and the primary winding of a transformer connected in parallel in the output circuit of the third amplifier and tuned to a desired frequency, and
a second capacitor, the secondary winding of said transformer and said write head connected in series and tuned to the desired frequency; and
means providing positive feedback between the resonant circuit and the first amplifier.

3,276,033
HIGH PACKING DENSITY BINARY RECORDING SYSTEM
George R. Cogar, Lancaster, Norwalk, Conn., and Floyd E. Ross, Warminster, Pa., assignors to Sperry Rand Corporation, New York, N.Y., a corporation of Delaware
Filed June 8, 1962, Ser. No. 201,197
5 Claims. (Cl. 346—74)

1. In a system for recording a series of information signals of two characteristically different types onto a record medium with said series including first and second information signals separated in time by one digit period, the combination comprising first and second storage circuits, means for applying said first and second information signals to said first storage circuit, means for applying the information stored in said first storage circuit to said second storage circuit whereby said first information signal is stored in said second storage circuit at the same time that said second information signal is stored in said first storage circuit, and means for comparing the information stored in said first and second storage circuits and generating an additional signal between said first and second information signals, means for recording said additional signal on a non-information bearing area of said record medium each time said first and second storage circuits are storing the same type of information signals.



DESIGNS

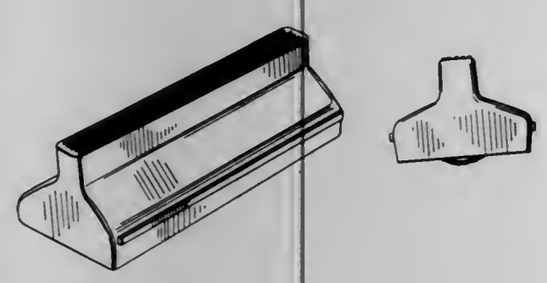
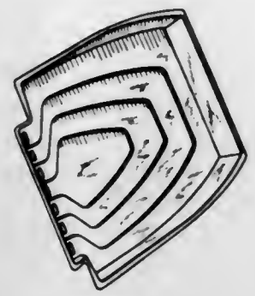
GLOVE
Stuart J. Beebe, P.O. Box 1441, Corsicana, Tex.
Filed Nov. 8, 1965, Ser. No. 88,030
Term of patent 14 years
(Cl. D3—11)



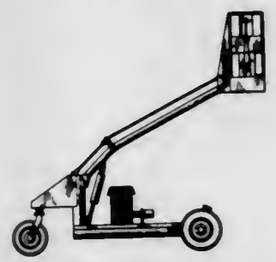
205,829
PROTECTIVE MAKE-UP HOOD
Lillian L. Gettinger, 2509 Shelley Dale Drive, Baltimore, Md.
Filed Apr. 7, 1965, Ser. No. 84,665
Term of patent 14 years
(Cl. D3—13)

205,830
CRIB
Stephen J. Rudy, 107 Overlook Drive, Greenwich, Conn.
Filed May 3, 1965, Ser. No. 85,068
Term of patent 14 years
(Cl. D5—5)

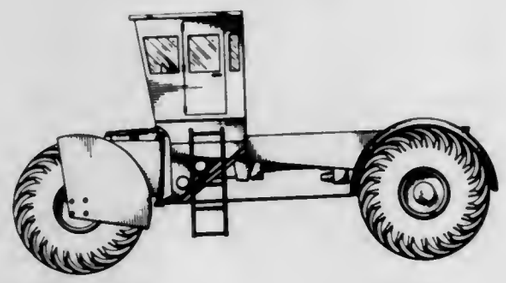


205,831
HAND SWEEPER
Saul Langner, 12 W. 27th St., New York, N.Y.
Filed Apr. 11, 1966, Ser. No. 1,853
Term of patent 14 years
(Cl. D9—2)

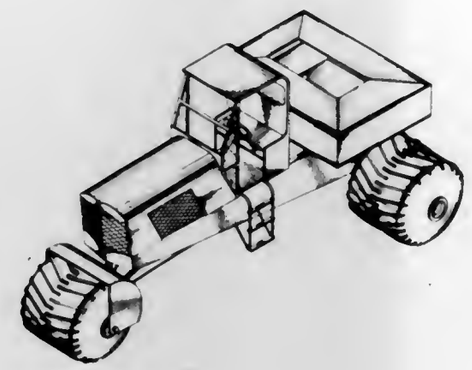
205,832
BACK BATH BRUSH
August Freidrich Sichelschmidt, 185 Parkside Drive, Toronto, Ontario, Canada
Filed Oct. 14, 1963, Ser. No. 76,971
Term of patent 14 years
(Cl. D9—2)



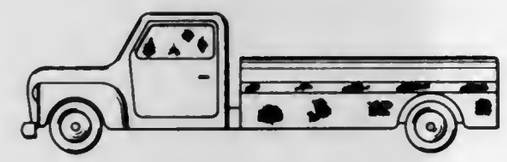
205,833
DRAINAGE TRAY FOR SINK OR THE LIKE
Norman Gardner, New Rochelle, N.Y., assignor to Joy Plastics, Inc., New York, N.Y., a corporation of New York
Filed Sept. 20, 1965, Ser. No. 87,079
Term of patent 14 years
(Cl. D9—6)



205,834
BUILDING
Richard C. Beach and Alvin E. Pierce, both of Fort Worth, Tex., assignors to Champlin Petroleum Company, Fort Worth, Tex., a corporation of Delaware
Filed Jan. 11, 1966, Ser. No. 567
Term of patent 14 years
(Cl. D13—1)



205,835
AERIAL PLATFORM
Emmet G. Slusher, Rte. 2, Lexington, Mo.
Filed Sept. 27, 1965, Ser. No. 87,167
Term of patent 14 years
(Cl. D14—3)

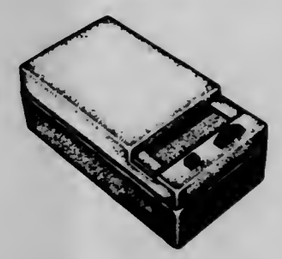


205,836
THREE-WHEELED SWAMP BUGGY WITH FORWARD CAB
Ward T. Commons, Halsey, Oreg.
Filed Oct. 18, 1965, Ser. No. 87,576
Term of patent 14 years
(Cl. D14—3)

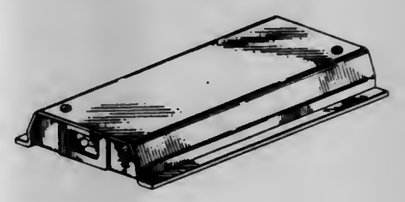
205,837
HOPPER-CARRYING THREE-WHEELED SWAMP BUGGY
Ward T. Commons, Halsey, Oreg.
Filed Oct. 18, 1965, Ser. No. 87,578
Term of patent 14 years
(Cl. D14—3)

205,838
TANK TRUCK
Bernard H. Hesemann, P.O. Box 374, Orleans, Nebr.
Filed Oct. 24, 1965, Ser. No. 87,929
Term of patent 14 years
(Cl. D14—3)

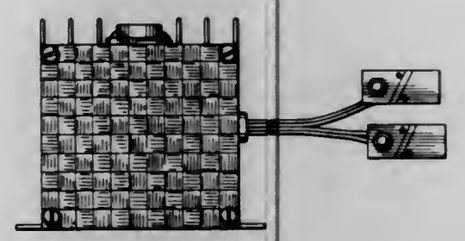
205,839
BABY CHAIR AND TABLE COMBINATION
Donald B. Cerf, 309 E. Live Oak, San Gabriel, Calif.
Filed May 10, 1965, Ser. No. 85,196
Term of patent 14 years
(Cl. D15—1)



205,840
CONVERTIBLE CHAIR FOR A CHILD
William W. Jones, Albuquerque, N. Mex., and Richard P. Niesz and Lawrence H. Sharp, Amarillo, Tex., assignors to Rocky-Hi, Inc., Amarillo, Tex., a corporation of Texas
Filed Aug. 31, 1965, Ser. No. 86,787
Term of patent 14 years
(Cl. D15—1)

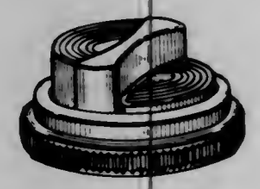


205,841
PIANO TOUCH INSTRUCTOR
Loren R. Withers, 2741 Dogwood Road, Durham, N.C.
Filed Aug. 3, 1965, Ser. No. 86,426
Term of patent 7 years
(Cl. D25—1)



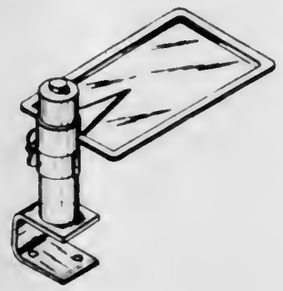
205,842
CASING FOR A PUNCHED TAPE READER
Helmut Riffert, Zetel, and Alfons Boothby, Wilhelmshaven, Germany, assignors to Olympia Werke AG, Wilhelmshaven, Germany
Filed Jan. 18, 1965, Ser. No. 83,481
Claims priority, application Germany Aug. 28, 1964
Term of patent 14 years
(Cl. D26—5)

205,843
SERVICE FITTING FOR UNDERFLOOR WIRING DUCT
De Forest D. Butler, Lexington, Ky., assignor to Square D Company, Park Ridge, Ill., a corporation of Michigan
Filed July 8, 1965, Ser. No. 86,078
Term of patent 14 years
(Cl. D26—5)

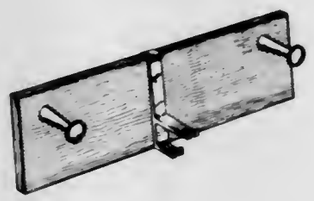


205,844
TRANSISTOR IGNITION UNIT FOR AN AUTOMOBILE OR SIMILAR ARTICLE
Robert G. Van Houten, Grand Junction, Colo., assignor to Delta Products, Inc., Grand Junction, Colo., a corporation of Colorado
Filed Mar. 4, 1965, Ser. No. 84,096
Term of patent 14 years
(Cl. D26—13)

205,845
MOTOR STARTER HOUSING
Joseph M. Parriott, Westport, Conn., and Douglas A. Long, New York, N.Y., assignors to Federal Pacific Electric Company, a corporation of Delaware
Filed Apr. 26, 1965, Ser. No. 84,958
Term of patent 14 years
(Cl. D26—13)



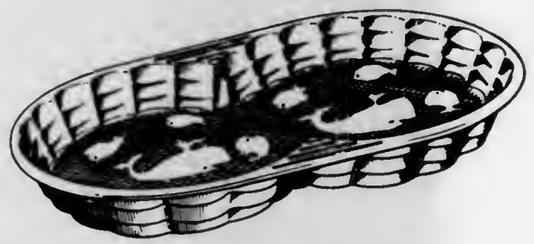
205,846
CONTROL KNOB FOR AN ELECTRICAL SWITCH
David E. Scott, Royal Oak, Mich., assignor to Square D Company, Park Ridge, Ill., a corporation of Michigan
Filed July 6, 1965, Ser. No. 86,025
Term of patent 14 years
(Cl. D26—13)



205,847
COMBINED FURNITURE PEDESTAL AND ADJUSTABLE CASTER UNIT
Wayne W. Good, Sturgis, Mich., assignor to Harter Corporation, Sturgis, Mich., a corporation of Michigan
Filed May 20, 1965, Ser. No. 85,376
Term of patent 14 years
(Cl. D33—1)

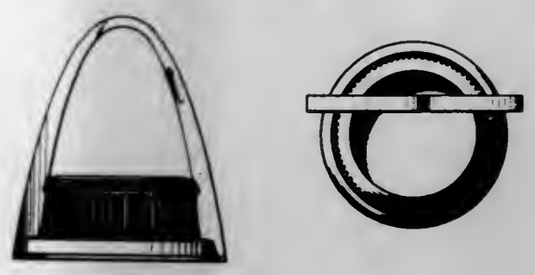
205,848
COMBINED TELEPHONE SHELF AND MOUNTING BRACKET THEREFOR
James E. Poole, 4348 Noble Ave., Sherman Oaks, Calif.
Filed July 14, 1965, Ser. No. 86,147
Term of patent 7 years
(Cl. D33—3)

205,849
COMBINED HAT AND COAT RACK
Raymond A. Magnuson, Hinsdale, Ill., assignor to Vogel-Peterson Co., Elmhurst, Ill., a corporation of Illinois
Filed Sept. 10, 1965, Ser. No. 86,934
Term of patent 14 years
(Cl. D33—8)

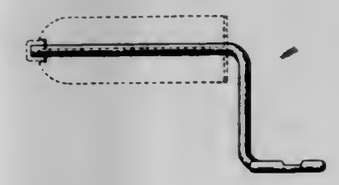


205,850
STUFFED TOY
Terrance R. Mitchell, Bloomington, Minn., assignor to Spectacular Products, Inc., Cannon Falls, Minn., a corporation of Minnesota
Filed Feb. 3, 1966, Ser. No. 910
Term of patent 14 years
(Cl. D34—2)

205,851
BOWLING PRACTICE GAME TARGET OR SIMILAR ARTICLE
Chalmer R. Smith, 32 Burton Ave. NE., Massillon, Ohio
Filed Oct. 20, 1965, Ser. No. 87,642
Term of patent 14 years
(Cl. D34—5)



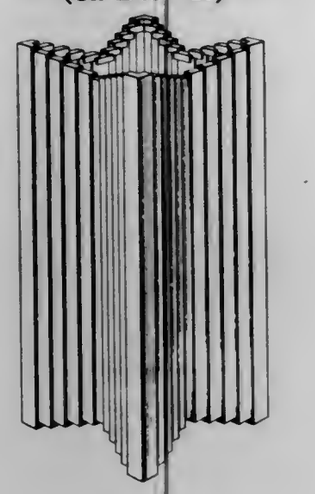
205,852
PLAY POOL OR SIMILAR ARTICLE
Leonard E. Greenberg, West Hartford, and Joseph Diemond, Simsbury, Conn., assignors to Coleco Industries, Inc., Hartford, Conn., a corporation of Connecticut
Filed Oct. 22, 1965, Ser. No. 87,756
Term of patent 14 years
(Cl. D34—5)



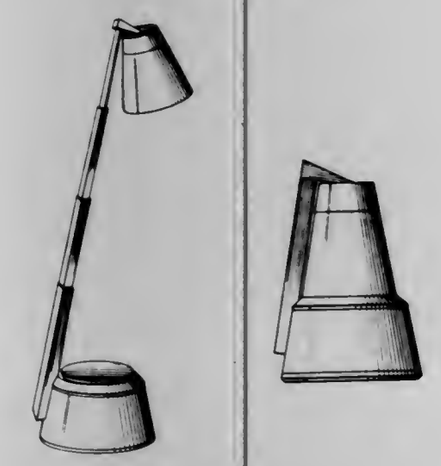
205,853
INFLATABLE NOVELTY HEAD GEAR
Elizabeth Ivon, 110 E. 36th St., New York, N.Y.
Filed Aug. 9, 1965, Ser. No. 86,514
Term of patent 14 years
(Cl. D34—15)

205,854
PLANTER OR THE LIKE
Esther Emmerich, 116 E. Main St., Mascoutah, Ill., and Concetta A. Richardson, 2245 Grandview, Springfield, Ill.
Filed Nov. 8, 1965, Ser. No. 88,040
Term of patent 14 years
(Cl. D35—3)

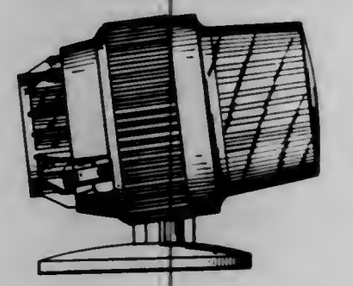
205,855
PAPER ROLL HOLDER OR THE LIKE
Russell K. Swanson, Kansas City, Mo., assignor to Central Molding and Manufacturing Company, Kansas City, Mo., a corporation of Missouri
Filed July 26, 1965, Ser. No. 86,278
Term of patent 14 years
(Cl. D41—1)



205,856
INTERVAL TIMER
Helmut D. Beerbaum, New Haven, Conn., assignor to Robertshaw Controls Company, Richmond, Va., a corporation of Delaware
Filed Feb. 10, 1965, Ser. No. 83,764
Term of patent 14 years
(Cl. D42—7)

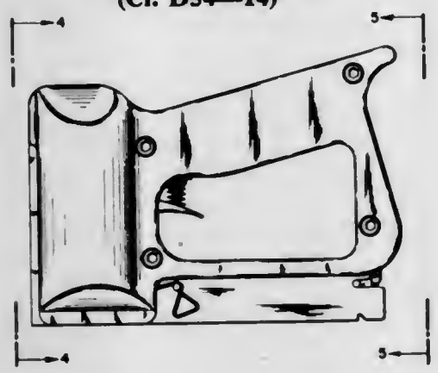


205,857
BROOCH OR SIMILAR ARTICLE
Lloyd F. Crisfield, 5418 Calle De Arboles, Torrance, Calif.
Filed Oct. 24, 1965, Ser. No. 87,907
Term of patent 14 years
(Cl. D45—19)



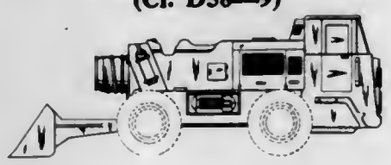
205,858
LAMP
Leo H. Klausen, 338 Hillcrest Ave., Willowdale, Ontario, Canada
Filed Aug. 2, 1965, Ser. No. 86,403
Term of patent 14 years
(Cl. D48—18)

205,859
EXTENSIBLE TABLE LAMP OR SIMILAR ARTICLE
Milton S. Pohl, Brookville, and Harvey A. Schwartz, Merrick, N.Y., assignors to Soss Manufacturing Company, Detroit, Mich., a corporation of Nevada
Filed Nov. 18, 1965, Ser. No. 88,140
Term of patent 14 years
(Cl. D48—20)

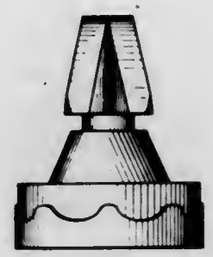


205,860
COMBINATION SIGNAL LAMP AND SIREN FOR A JUVENILE VEHICLE
Viktor Schreckengost, Cleveland Heights, Ohio, assignor to The Murray Ohio Manufacturing Co., Nashville, Tenn., a corporation of Ohio
Filed Aug. 16, 1965, Ser. No. 86,591
Term of patent 14 years
(Cl. D48—24)

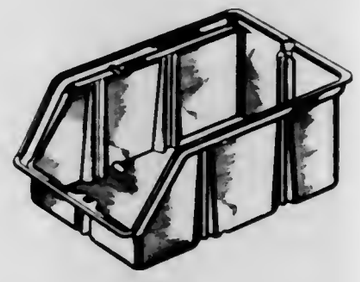
205,861
SPOON
Tsunehiko Ikeda, 240 Sakuragaoka, Hodogaya-ku, Yokohama-shi, Japan
Filed June 24, 1965, Ser. No. 85,881
Term of patent 14 years
(Cl. D54—12)



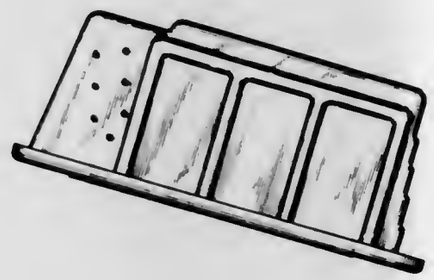
205,862
ELECTRIC STAPLER
Norman R. Doherty, 32 Sunset Ave., Farmingdale, N.Y.
Filed Dec. 27, 1965, Ser. No. 344
Term of patent 14 years
(Cl. D54—14)



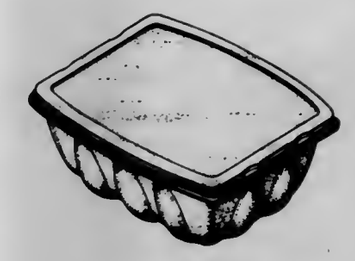
205,863
SPECTACLE FRAME FRONT
Harry Weissman, Great Neck, N.Y. (% Paramount Optical Mfg. Corp., 60—06 39th Ave., Woodside, N.Y. 11377)
Filed May 25, 1965, Ser. No. 85,515
Term of patent 14 years
(Cl. D57—1)



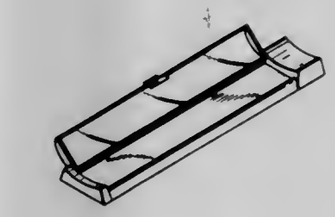
205,864
BOTTLE OR SIMILAR ARTICLE
Livingston C. Douglas, Leonia, N.J., assignor to Colgate-Palmolive Company, New York, N.Y., a corporation of Delaware
Filed July 30, 1964, Ser. No. 81,078
Term of patent 14 years
(Cl. D58—9)



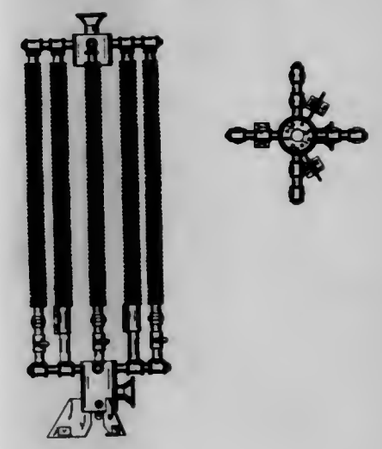
205,865
CLOSURE
Alvin J. Porter, Hopkins, Minn., assignor to National Dairy Products Corporation, New York, N.Y., a corporation of Delaware
Filed Nov. 26, 1965, Ser. No. 88,240
Term of patent 14 years
(Cl. D58—26)



205,866
STACKABLE BIN BOX
Donald J. Asenbauer, 13820 E. Close St., Whittier, Calif.
Filed June 18, 1965, Ser. No. 85,796
Term of patent 14 years
(Cl. D58—12)



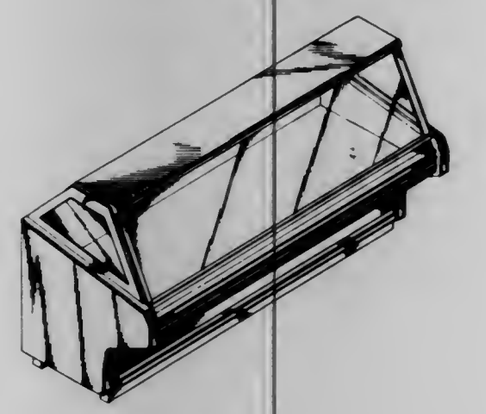
205,867
TOTE TRAY
Anson W. Voorhees, Jr., and Carl C. Cole, Tucson, Ariz., assignors to Pioneer Products, Inc., Tucson, Ariz., a corporation of Arizona
Filed Aug. 9, 1965, Ser. No. 86,494
Term of patent 14 years
(Cl. D58—12)



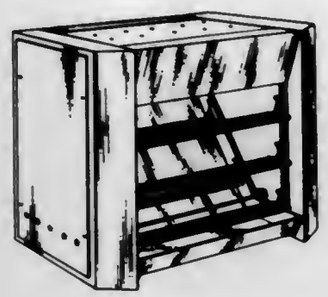
205,868
COMBINED CONTAINER AND CLOSURE THEREFOR
Milton Immermann, Piermont, Archie G. Drummond, Jr., Wantagh, and Harold J. Vanderhyde, North Merrick, N.N.Y., Robert C. Fogle, Darien, Conn., and Roger H. Sweet, Bayside, and Calvin Lee Payne, Jr., Hastings on Hudson, N.Y., assignors to Clayton Anderson & Co., Dallas, Tex., a corporation of Delaware
Filed Sept. 24, 1965, Ser. No. 87,156
Term of patent 14 years
(Cl. D58—12)

205,869
DISPLAY BOX
Jerome G. Hahn, Englewood, N.J., assignor to Jacoby-Bender, Inc., Woodside, N.Y., a corporation of New York
Filed Apr. 7, 1965, Ser. No. 84,657
Term of patent 7 years
(Cl. D58—12.7)

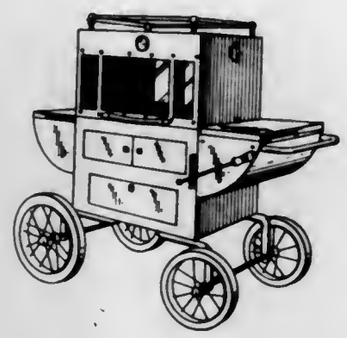
205,870
HEAT EXCHANGER
Wilkes E. Hill, 10 Summit St., Erie, Pa.
Filed Oct. 14, 1965, Ser. No. 87,474
Term of patent 14 years
(Cl. D62—4)



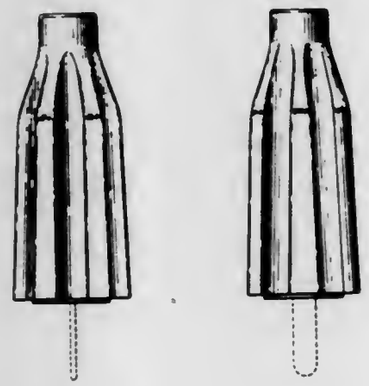
205,871
ILLUMINABLE HOLDER FOR A TELEPHONE AND WRITING PAD
Leonard S. Youngs, 5903 Watt Ave., North Highlands, Calif.
Filed Aug. 10, 1965, Ser. No. 86,521
Term of patent 14 years
(Cl. D74—1)



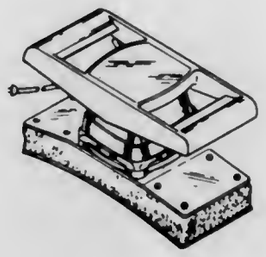
205,872
WRITING INSTRUMENT
Kenneth Parker, Janesville, Wis., assignor to The Parker Pen Company, Janesville, Wis., a corporation of Wisconsin
Filed June 5, 1964, Ser. No. 80,299
Term of patent 14 years
(Cl. D74—17)



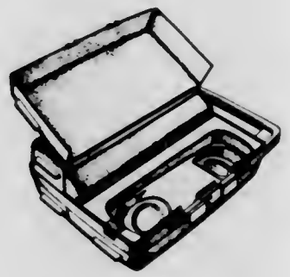
205,873
REFRIGERATED DISPLAY CASE
Winfield R. Burtis, Trenton, N.J., assignor to Emhart Corporation, Bloomfield, Conn., a corporation of Connecticut
Filed Apr. 5, 1965, Ser. No. 84,610
Claims priority, application Canada Mar. 25, 1965
Term of patent 14 years
(Cl. D80—11)



205,874
PRETZEL BAKING OVEN
Charles W. King, 4418 Spruce St., Philadelphia, Pa.
Filed May 28, 1965, Ser. No. 85,488
Term of patent 14 years
(Cl. D81—10)

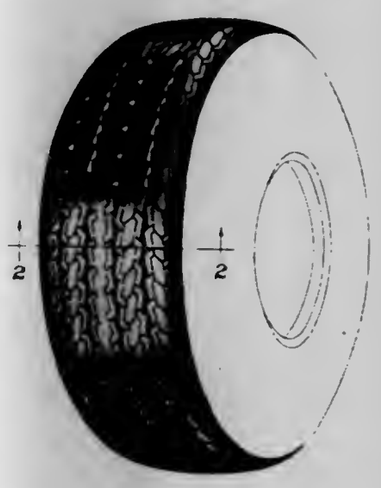


205,875
PORTABLE GRILL
Harley B. Weatherly, 11 Lynncrest St., Chattanooga, Tenn.
Filed Sept. 3, 1965, Ser. No. 86,837
Term of patent 14 years
(Cl. D81—10)



205,876
FROZEN CONFECTION
James S. Merritt, Shawnee Mission, Kans., assignor to The James S. Merritt Company, Kansas City, Mo., a corporation of Missouri
Filed Nov. 19, 1965, Ser. No. 88,153
Term of patent 14 years
(Cl. D82—2)

205,877
MASSAGER
Joseph A. La Barber, 1313 Maenpah Circle, Las Vegas, Nev.
Filed Nov. 15, 1965, Ser. No. 88,113
Term of patent 14 years
(Cl. D83—1)



205,878
CARRYING CASE FOR TELEPHONIC COMMUNICATIONS APPARATUS
Frederick G. Buhrendorf, Colts Neck, N.J., Henry Dreyfuss, South Pasadena, Calif., and Oskar Loosme, Lincroft, N.J., assignors to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Sept. 20, 1965, Ser. No. 87,068
Term of patent 14 years
(Cl. D87—5)

205,879
PLEATED UMBRELLA
Edward Chodosh, 36–40 Northiam St., Hackney E. 8, England
Filed Oct. 8, 1964, Ser. No. 82,084
Claims priority, application Great Britain Apr. 10, 1964
Term of patent 14 years
(Cl. D88—3)

205,880
TIRE
Glen L. Wittenmyer, 121 Dodge Ave., Akron, Ohio
Filed Dec. 22, 1965, Ser. No. 279
Term of patent 14 years
(Cl. D90—20)

LIST OF PLANT PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 27TH DAY OF SEPTEMBER, 1966

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Le Grice, Edward B. Rosa floribunda plant. 2,673, 9–27–66, Cl. 24.

Motzkau, Henry W., to Yoder Bros., Inc. Azalea plant. 2,672, 9–27–66, Cl. 57.

Yoder Bros, Inc.: *See*—
Motzkau, Henry W. 2,672.

LIST OF DESIGN PATENTEES

Anderson, Clayton, & Co.: *See*—
Immermann, Milton, Drummond, Vanderhyde, Fogle, Sweet, and Payne. 205,868.

Asenbauer, Donald J. Stackable bin box. 205,866, 9–27–66, Cl. D58—12.

Beach, Richard C., and A. E. Pierce, to Champlin Petroleum Co. Building. 205,834, 9–27–66, Cl. D13—1.

Beebe, Stuart J. Glove. 205,828, 9–27–66, Cl. D3—11.

Beerbaum, Helmut D., to Robertshaw Controls Co. Interval timer. 205,856, 9–27–66, Cl. D42—7.

Bell Telephone Laboratories, Inc.: *See*—
Buhrendorg, Frederick G., Dreyfuss, and Loosme. 205,878.

Boothby, Alfons: *See*—
Riffert, Helmut, and Boothby. 205,842.

Buhrendorg, Frederick G., H. Dreyfuss, and O. Loosme, to Bell Telephone Laboratories, Inc. Carrying case for telephonic communications. 205,878, 9–27–66, Cl. D87—5.

Burtis, Winfield R., to Emhart Corp. Refrigerated display case. 205,873, 9–27–66, Cl. D80—11.

Butler, De Forest D., to Square D Co. Service fitting for underfloor wiring duct. 205,843, 9–27–66, Cl. D26—5.

Central Molding and Mfg. Co.: *See*—
Swanson, Russell K. 205,855.

Cerf, Donald B. Baby chair and table combination. 205,839, 9–27–66, Cl. D15—1.

Champlin Petroleum Co.: *See*—
Beach, Richard C. and Pierce. 205,834.

Chodosh, Edward. Pleated umbrella. 205,870, 9–27–66, Cl. D88—3.

Cole, Carl C.: *See*—
Voorhees, Anson W., Jr., and Cole. 205,867.

Coleco Industries, Inc.: *See*—
Greenberg, Leonard E., and Diemond. 205,852.

Colgate-Palmolive Co.: *See*—
Douglas, Livingston C. 205,864.

Commons, Ward T. Three-wheeled swamp buggy with forward cab. 205,836, 9–27–66, Cl. D14—3.

Commons, Ward T. Hopper-carrying three-wheeled swamp buggy. 205,837, 9–27–66, Cl. D14—3.

Cornelius Co., The: *See*—
Cornelius, Richard T. 205,825.
Reichow, James R. 205,826.

Cornelius, Richard T., to The Cornelius Co. Beverage dispensing tank, or similar article. 205,825, 9–27–66, Cl. D2—3.

Crisfield, Lloyd F. Brooch or similar article. 205,857, 9–27–66, Cl. D45—19.

Delta Products, Inc.: *See*—
Van Houten, Robert G. 205,844.

Diemond, Joseph: *See*—
Greenberg, Leonard E., and Diemond. 205,852.

Doherty, Norman R. Electric stapler. 205,862, 9–27–66, Cl. D54—14.

Douglas, Livingston C., to Colgate-Palmolive Co. Bottle or similar article. 205,864, 9–27–66, Cl. D58—9.

Dreyfuss, Henry: *See*—
Budrendorg, Frederick G., Dreyfuss, and Loosme. 205,878.

Drummond, Archie G., Jr.: *See*—
Immermann, Milton, Drummond, Vanderhyde, Fogle, Sweet, and Payne. 205,868.

Emhart Corp.: *See*—
Burtis, Winfield R. 205,873.

Emmerich, Esther, and C. A. Richard. Planter or the like. 205,854, 9–27–66, Cl. D35—3.

Federal Pacific Electric Co.: *See*—
Parriott, Joseph M., and Long. 205,845.

Fisher, Robert. Card display holder. 205,824, 9–27–66, Cl. D1—3.

Fogle, Robert C.: *See*—
Immermann, Milton, Drummond, Vanderhyde, Fogle, Sweet, and Payne. 205,868.

Gardner, Norman, to Joy Plastics, Inc. Drainage tray for sink or the like. 205,833, 9–27–66, Cl. D9—6.

Gettinger, Lillian L. Protective make-up hood. 205,829, 9–27–66, Cl. D3—13.

Good, Wayne W., to Harter Corp. Combined furniture pedestal and adjustable caster unit. 205,847, 9–27–66, Cl. D33—1.

Greenberg, Leonard E., and J. Diemond, to Coleco Industries, inc. Play pool or similar article. 205,852, 9–27–66, Cl. D34—5.

Hahn, Jerome G., to Jacoby-Bender, Inc. Display box. 205,869, 9–27–66, Cl. D58—12.7.

Harter Corp.: *See*—
Good, Wayne W. 205,847.

Hesemann, Bernard H. Tank truck. 205,838, 9–27–66, Cl. D14—3.

Hill, Wilkes E. Heat exchanger. 205,870, 9–27–66, Cl. D62—4.

Ikeda, Tsunehiko. Spoon. 205,861, 9–27–66, Cl. D54—12.

Immermann, Milton, A. G. Drummond, Jr., H. J. Vanderhyde, R. C. Fogle, R. H. Sweet, and C. L. Payne, Jr., to Clayton Anderson & Co. Combined container and closure therefor. 205,868. 9–27–66, Cl. D58—12.

Ivon, Elizabeth. Inflatable novelty head gear. 205,853, 9–27–66, Cl. D34—15.

Jacoby-Bender, Inc.: *See*—
Hahn, Jerome G. 205,869.

Jones, William W., R. P. Niesz, and L. H. Sharp, to Rocky-Hi, Inc. Convertible chair for a child. 205,840, 9–27–66, Cl. D15—1.

Joy Plastics, Inc.: *See*—
Gardner, Norman. 205,833.

King, Charles W. Pretzel baking oven. 205,874, 9–27–66, Cl. D81—10.

Klausen, Leo H. Lamp. 205,858, 9–27–66, Cl. D48—18.

La Barber, Joseph A. Massager. 205,877, 9–27–66, Cl. D83—1.

Languer, Saul. Hand sweeper. 205,831, 9–27–66, Cl. D9—2.

Long, Douglas A.: *See*—
Parriott, Joseph M., and Long. 205,845.

Loosme, Oskar: *See*—
Buhrendorg, Frederick G., Dreyfuss, and Loosme. 205,878.

Magnuson, Raymond A., to Vogel-Peterson Co. Combined hat and coat rack. 205,849, 9–27–66, Cl. D33—8.

Merritt, James S., to The James S. Merritt Co. Frozen confection. 205,876, 9–27–66, Cl. D82—2.

Merritt, James S., Co., The: *See*—
Merritt, James S. 205,876.

Mitchell, Terrance R., to Spectacular Products, Inc. Stuffed toy. 205,850, 9–27–66, Cl. D34—2.

Murray Ohio Mfg. Co., The: *See*—
Schreckengost, Viktor. 205,860.

National Dairy Products Corp.: *See*—
Porter, Alvin J. 205,865.

Niesz, Richard P.: *See*—
Jones, William W., Niesz, and Sharp. 205,840.

Olympia Werke AG: *See*—
Riffert, Helmut, and Boothby. 205,842.

Parker, Kenneth, to The Parker Pen Co. Writing instrument. 205,872, 9–27–66, Cl. D74—17.

Parker Pen Co., The: *See*—
Parker, Kenneth. 205,872.

Parriott, Joseph M., and D. A. Long, to Federal Pacific Electric Co. Motor starter housing. 205,845, 9–27–66, Cl. D26—13.

Payne, Calvin L., Jr.: *See*—
Immermann, Milton, Drummond, Vanderhyde, Fogle, Sweet, and Payne. 205,868.

Pierce, Alvin E.: *See*—
Beach, Richard C., and Pierce. 205,834.

Pioneer Products, Inc.: *See*—
Voorhees, Anson W., Jr., and Cole. 205,867.

Plagenberg, Walter A., to White Cross Mfg. Co., Inc. Faucet for a beverage dispenser or the like. 205,827, 9–27–66, Cl. D2—3.

Pohl, Milton S., and H. A. Schwartz, to Soss Mfg. Co. Extensible table lamp or similar article. 205,859, 9–27–66, Cl. D48—20.

Poole, James E. Combined telephone shelf and mounting bracket therefor. 205,848, 9–27–66, Cl. D33—3.

Porter, Alvin J., to National Dairy Products Corp. Closure. 205,865, 9–27–66, Cl. D58—26.

Reichow, James R., to The Cornelius Co. Beverage dispenser, or similar article. 205,826, 9–27–66, Cl. D2—3.

Richard, Concetta A.: *See*—
Emmerich, Esther, and Richard. 205,854.

Riffert, Helmut, and A. Boothby, to Olympia Werke AG. Casing for a punched tape reader. 205,842, 9–27–66, Cl. D26—5.

Robertshaw Controls Co.: *See*—
Beerbaum, Helmut D. 205,856.

Rocky-Hi, Inc.: *See*—
Jones, William W., Niesz, and Sharp. 205,840.

Rudy, Stephen J. Crib. 205,830, 9–27–66, Cl. D5—5.

Schreckengost, Viktor, to The Murray Ohio Mfg. Co. Combination signal lamp and siren for a juvenile vehicle. 205,860, 9–27–66, Cl. D48—24.
Schwartz, Harvey A.: *See*—
Pohl, Milton S., and Schwartz. 205,859.
Scott, David E., to Square D Co. Control knob for an electrical switch. 205,846, 9–27–66, Cl. D26—13.
Sharp, Lawrence H.: *See*—
Jones, William W., Niess, and Sharp. 205,840.
Sicheischmidt, August F. Back bath brush. 205,832, 9–27–66, Cl. D9—2.
Slusher, Emmet G. Aerial platform. 205,835, 9–27–66, Cl. D14—3.
Smith, Chalmer R. Bowling practice game target or similar article. 205,851, 9–27–66, Cl. D34—5.
Soss Mfg. Co.: *See*—
Pohl, Milton S., and Schwartz. 205,859.
Spectacular Products, Inc.: *See*—
Mitchell, Terrance R. 205,850.
Square D Co.: *See*—
Butler, De Forest D. 205,843.
Scott, David E. 205,846.
Swanson, Russell K., to Central Molding and Mfg. Co. Paper roll holder or the like. 205,855, 9–27–66, Cl. D41—1.
Sweet, Roger H.: *See*—
Immermann, Milton, Drummond, Vanderhyde, Fogle, Sweet, and Payne. 205,868.
Vanderhyde, Harold J.: *See*—
Immermann, Milton, Drummond, Vanderhyde, Fogle, Sweet, and Payne. 205,868.
Van Houten, Robert G., to Delta Products, Inc. Translator ignition unit for an automobile or similar article. 205,844, 9–27–66, Cl. D26—13.
Vogel-Peterson Co.: *See*—
Magnuson, Raymond A. 205,849.
Voorhees, Anson W., Jr., and C. C. Cole, to Pioneer Products, Inc. Tote tray. 205,867, 9–27–66, Cl. D58—12.
Weatherly, Harley B. Portable grill. 205,875, 9–27–66, Cl. D81—10.
Weissman, Harry. Spectacle frame front. 205,863, 9–27–66, Cl. D57—1.
White Cross Mfg. Co., Inc.: *See*—
Plagenberg, Walter A. 205,827.
Withers, Loren R. Piano touch instructor. 205,841, 9–27–66, Cl. D25—1.
Wittenmyer, Glen L. Tire. 205,880, 9–27–66, Cl. D90—20.
Youngs, Leonard S. Illuminable holder for a telephone and writing pad. 205,871, 9–27–66, Cl. D74—1.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 27TH DAY OF SEPTEMBER, 1966

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

AMP Inc.: *See*—
Ferdon, Gilbert D., and Henschen. 3,275,765.
McCaughey, William S. 3,275,968.
Mixon, James L., Jr. 3,275,974.
Rueger, Herman. 3,276,014.
Shlesinger, Bernard E., Jr. 3,275,973.
Abbott Laboratories: *See*—
Endicott, Clarence J., and Martin. 3,275,518.
Abermeth, Hubert, to Klockner-Humboldt-Deutz Aktiengesellschaft. Rotary piston internal combustion engine. 3,274,980, 9–27–66, Cl. 123—8.
Abex Corp.: *See*—
Wahlgren, John G. 3,274,825.
Abos, Ralph L., to Polycarbide Corp. Apparatus for forming high-temperature resistant member. 3,275,735, 9–27–66, Cl. 13—25.
Abraham, Carlos S. Steam iron. 3,274,714, 9–27–66, Cl. 38—77.
Achen, Robert K. Guessing game device. 3,275,323, 9–27–66, Cl. 273—120.
Achin, Gerard R.: *See*—
Thomson, Arthur J., Achin, and Rynhart. 3,275,425.
Acme Visible Records, Inc.: *See*—
Janssen, Alexander P. 3,274,715.
Adams, Albert, S. E. Tschappler, and H. U. Ziemer, to International Minerals & Chemicals Corp. Beneficiation of langbeinite-containing materials. 3,275,141, 9–27–66, Cl. 209—166.
Adams, Clyde M., Jr., to American Machine & Foundry Co. Method of flame-hardening welded structures. 3,275,481, 9–27–66, Cl. 148—127.
Adams, Derek S., to Joseph Lucas (Industries) Ltd. Voltage regulators. 3,275,924, 9–27–66, Cl. 322—28.
Addressograph-Multigraph Corp.: *See*—
Dunn, Robert A. 3,274,840.
Adler, Robert, to Zenith Radio Corp. Electron coupling system, coupling through the envelope wall of discharge device by electromagnetic coupling. 3,275,880, 9–27–66, Cl. 315—4.
Adler, Robert, to Zenith Radio Corp. Dual output channel electron beam parametric amplifier with noise elimination. 3,275,943, 9–27–66, Cl. 330—4.7.
Ador Corp.: *See*—
Riegelman, Harry M. 3,275,361.
Aerojet-General Corp.: *See*—
Lieberman, Irving, and Zernow. 3,274,771.
Aeronautical Machinery Corp.: *See*—
Bloch, Erich. 3,275,297.
Aeronca Mfg. Corp.: *See*—
Brunner, John E. 3,276,022.
Affleck, John H., III.: *See*—
Bristow, Robert H., and Affleck. 3,275,435.
Agfa Aktiengesellschaft: *See*—
Biedermann, Klaus, Jakob, Kubitzek, and Simson. 3,274,913.
Biedermann, Friedrich, Fauth, Jakob, Simson, and Wasielewski. 3,274,914.
Aghnides, Elie P. Aerators with enlarged stream outlets. 3,275,246, 9–27–66, Cl. 239—428.5.
Agricola, Norman F.: *See*—
Thackeray, William E. 3,275,007.
Aguinek, Alvin: *See*—
Mishcon, Lester, and Aguinek. 3,274,800.
Aibara, Kosaku: *See*—
Kobayashi, Hiroto, and Aibara. 3,275,022.
Ahlström, A. Osakeyhtio: *See*—
Valtanen, Seppo O., Punttila, and Sjolund. 3,275,156.
Ainis, Herman, to California Institute Research Foundation. Method and aparatus for controlling culture growth. 3,275,528, 9–27–66, Cl. 195—104.
Air Preheater Co., Inc., The: *See*—
Dore, Franklyn. 3,274,672.
Air Reduction Co., Inc.: *See*—
Cushman, Everett H. 3,275,786.
Mitchell, Harold C. 3,274,789.
Aircraft Armaments, Inc.: *See*—
Barr, Irwin R. 3,275,193.
Airetool Mfg. Co., The: *See*—
Martin, Paul W. 3,275,116.
Ajinomoto Co., Inc.: *See*—
Shiro, Teruo, Konishi, Okumura, and Takahashi. 3,275,526.
Akers, John N. Multi-stage water distilling apparatus. 3,275,530, 9–27–66, Cl. 202—174.
Akron Products Co., The: *See*—
Cruse, William C. 3,274,680.
Aleck, Benjamin J., to Arde-Portland, Inc. Generalized stretch forming. 3,274,813, 9–27–66, Cl. 72—62.
Alexander, Robert R., and A. J. Urjil, to W. R. Grace & Co. Ternolymer of vinyl acetate, dialkyl ester and alkyl acrylate. 3,275,589, 9–27–66, Cl. 260—29.6.
Alexandrovsky, George. Oxygen steel making. 3,275,432, 9–27–66, Cl. 75—60.
Alexandrowicz, Alvin W.: *See*—
Herbenar, Edward J., and Alexandrowicz. 3,275,338.
Allen, Duff S., Jr., E. R. Ruso, and S. A. Frankel, to American Cyanamid Co. Alpha-cyanomethylaminonitrile and alpha-carboxamidomethylaminonitride compounds. 3,275,677, 9–27–66, Cl. 260—465.
Allen Fruit Co., Inc.: *See*—
Allen, Kenneth M., Van Dyke, and Breunsbach. 3,275,136.
Allen, James M., and A. J. Scalzo, to Westinghouse Electric Corp. Elastic fluid apparatus. 3,275,294, 9–27–66, Cl. 253—39.1.
Allen, Kenneth M., L. H. Van Dyke, Jr., and R. L. Breunsbach, to Allen Fruit Co., Inc. Apparatus for detecting seeds in fruit. 3,275,136, 9–27–66, Cl. 209—74.
Allen, William M., to Hoover Ball and Bearing Co. Preparation of meat products. 3,275,452, 9–27–66, Cl. 99—109.
Allied Chemical Corp.: *See*—
Bolger, John C. 3,275,252.
Oswald, Hendrikus J., and Turi. 3,275,592.
Schule, Elmer C., and Pike. 3,275,733.
Wooster, George S., and Berger. 3,275,709.
Wooster, George S., and Kane. 3,275,710.
Wooster, George S. 3,275,711.
Allin, Norman J., to Bradley A. Kendis, trustee. Variable pitch propeller. 3,275,083, 9–27–66, Cl. 170—160.13.
Allis-Chalmers Mfg. Co.: *See*—
Colton, Ervin. 3,275,414.
Colton, Ervin. 3,275,467.
Hooper, Donald M. 3,274,674.
Matthews, Dean A. 3,275,092.
Pflanz, Herbert M., and Wachta. 3,275,777.
Allmanna Svenska Elektriska Aktiebolaget: *See*—
Almstrom, Knut. 3,275,838.
Allswede, Jerry L.: *See*—
Jackman, Robert M., and Allswede. 3,274,662.
Almstrom, Knut, to Allmanna Svenska Elektriska Aktiebolaget. Equipment for regulating transmitted power between two asynchronously connected electric alternating current grids. 3,275,838, 9–27–66, Cl. 307—82.
Aloia, Dominick. Level and rule combination. 3,274,695, 9–27–66, Cl. 33—265.
Alsch, Richard E., to Graham Transmissions, Inc. Torque switch for variable speed transmissions. 3,274,859, 9–27–66, Cl. 74—796.
Aluminum Co. of America: *See*—
Demsey, John N., Jr., and Huber. 3,274,905.
Alvin, William R. Water treatment apparatus. 3,275,030, 9–27–66, Cl. 137—565.
Alyea, Harold W., E. D. Jurasinski, and E. V. Fliss, to Johnson Service Co. Dampers and seal means therefor. 3,275,031, 9–27–66, Cl. 137—601.
American Brake Shoe Co.: *See*—
Henry, Augustus P. 3,275,017.
American Can Co.: *See*—
Livingstone, Alexander. 3,275,200.
American Cyanamid Co.: *See*—
Allen, Duff S., Jr., Ruso, and Frankel. 3,275,677.
Cantrall, Edward W., and Bernstein. 3,275,624.
Freeman, Mark P., and Fussman. 3,275,411.
Hofmann, Corris M. 3,275,688.
Nash, Robert A., and Weidenheimer. 3,275,513.
Petropoulos, John C., and Megna. 3,275,599.
Skrivan, Joseph F. 3,275,412.
American Enka Corp.: *See*—
Gonsalves, Conrad J. 3,274,764.
American Machine & Foundry Co.: *See*—
Adams, Clyde M., Jr. 3,275,481.
American Optical Co.: *See*—
Siegmund, Walter P. 3,275,428.
American Pipe and Construction Co.: *See*—
Hausmann, Delbert A., and Szulc. 3,275,040.
American Radiator & Standard Sanitary Corp.: *See*—
Fowell, Andrew J. 3,275,223.
Huston, William D. 3,275,936.
Kozel, James A., and McClure. 3,275,033.
Plasko, Emil R. 3,275,014.
American Safety Equipment Corp.: *See*—
Hamann, Walter F. 3,274,656.
American Telephone and Telegraph Co.: *See*—
Howell, Jesse O., and MacLeod. 3,275,754.
American Thermocatalytic Corp.: *See*—
Weiss, Gerhart, and Cornely. 3,275,497.
Ampex Corp.: *See*—
Johnson, Keith O. 3,275,949.
Mendenhall, Charles E., and Chur. 3,275,990.
Amsted Industries Inc.: *See*—
Lohman, Gordon R. 3,274,681.
Anaconda Wire and Cable Co.: *See*—
O'Mara, Joseph B., and D'Ascoli. 3,274,688.
Anchor Hocking Glass Corp.: *See*—
Roberts, Cecil P., and Runco. 3,274,748.
Anderson, Armand: *See*—
Weaver, Paul J. 3,275,769.
Anderson Electric Corp.: *See*—
Flynn, Gordon L., Kidd, and Peek. 3,275,738.

Anderson, James H. Internal pipe bender. 3,274,817, 9–27–66, Cl. 72—298.

Anderson, John B.: *See*—
Wiechard, Robert N., and Anderson. 3,274,961.

Anderson, Richard M., and R. A. Essig, to Westinghouse Electric Corp. Heat pump defrost system. 3,274,793, 9–27–66, Cl. 62—151.

Andrel, Raymond: *See*—
Glass, Ronald, Andrel and Harrison. 3,275,158.

Andren, Karl H., and C. R. Tuttle, to Artos Engineering Co. Terminal attaching device. 3,274,664, 9–27–66, Cl. 29—33.

Andress, Peter, Jr., to Union Oil Co. of California. Fluid flow control device. 3,275,037, 9–27–66, Cl. 138—46.

Andouart, Leon, to Societe des Etablissements Andouart. Extrusion machines for plastic material. 3,274,647, 9–27–66, Cl. 18—12.

Andrews, Peter G., to Walker Mfg. Co. Method of making a muffler. 3,274,678, 9–27–66, Cl. 29—471.1.

Angst, Walter, to Kollsman Instrument Corp. Vertical velocity indicator. 3,274,830, 9–27–66, Cl. 73—179.

Annis, Max R., to Esso Production Research Co. Drilling muds. 3,275,551, 9–27–66, Cl. 252—8.5.

Anocut Engineering Co.: *See*—
Williams, Lynn A. 3,275,543.

Anstey, Nigel A.: *See*—
Lerwill, William E., and Anstey. 3,276,015.

Aoki, Tomoo, to Toyo Cloth Co. Ltd., and Toyo Rayon Co. Ltd. Method for the production of artificial leather. 3,275,468, 9–27–66, Cl. 117—63.

Arde-Portland, Inc.: *See*—
Aleck, Benjamin J. 3,274,813.

Argue, Gary R.: *See*—
Banewicz, John J., Argue, and Stewart. 3,275,903.

Armour and Co.: *See*—
Cramer, John W. 3,274,642.
Knauss, Robert L. 3,274,639.

Armstrong Cork Co.: *See*—
Horst, Robert L. 3,274,668.

Arnold, Robert T. Container transport device. 3,275,175, 9–27–66, Cl. 214—383.

Arseneau, Roger E., to International Telephone and Telegraph Corp. Timer. 3,275,850, 9–27–66, Cl. 307—88.5.

Artos Engineering Co.: *See*—
Andren, Karl H., and Tuttle. 3,274,664.

Ashby, Artie D., Jr., and E. R. Higgins, to Westinghouse Electric Corp. Electrical transformer having a woven winding. 3,275,966, 9–27–66, Cl. 336—181.

Ashby, Billy B., to Esso Research and Engineering Co. Apparatus for drying particulate materials. 3,274,698, 9–27–66, Cl. 34—48.

Atkins, Carl E., to Tung-Sol Electric Inc. Touch control circuit. 3,275,897, 9–27–66, Cl. 317—146.

Atkinson, Guy F., Co.: *See*—
Rein, Edward N., and Dolman. 3,275,330.

Atlas Copco Aktiebolag: *See*—
Zettergren, Birger. 3,275,388.

Atlas Corp.: *See*—
Poller, Harry S. 3,274,879.

Auld, Samuel H., Jr., to Siegler Lear Inc. Automatic control for aircraft. 3,275,268, 9–27–66, Cl. 244—77.

Automatic Canteen Co. of America: *See*—
Panochyk, Ralph G. 3,274,718.

Automatic Electric Laboratories, Inc.: *See*—
Esperseth, Maurice H., Sikorski, Spellnes, and Wedmore. 3,275,752.

Automation Devices, Inc.: *See*—
Gardner, George J. 3,275,120.

Automation Industries, Inc.: *See*—
Welghart, Frederick G. 3,274,821.

Avien, Inc.: *See*—
Nee, Thomas F. 3,275,418.

Azetec Mfg. Co.: *See*—
Meshew, Allan D. 3,275,299.

Baas, Erwin. Anchor. 3,274,969, 9–27–66, Cl. 114—208.

Baba, Kunio, 50% to Dearman Co., Ltd. Apparatus for automatic locking and releasing cord reels and automatic connecting and disconnecting of the cord on the reel. 3,275,780, 9–27–66, Cl. 200—153.

Babcock & Wilcox Co., The: *See*—
Evans, Sidley O. 3,274,812.
Schinderberg, Donald C., and Winders. 3,275,521.

Babich, Edward, and R. H. Leidal, to Galaxy Boring Co. Boring bar. 3,274,862, 9–27–66, Cl. 77—58.

Babson, Edward S., to United Shoe Machinery Corp. Conveyor control devices. 3,274,953, 9–27–66, Cl. 104—172.

Badische Anilin- & Soda-Fabrik Aktiengesellschaft: *See*—
Bonitz, Eckhard, and Daeuble. 3,275,400.
Huenig, Siegfried, Geldern, and Luecke. 3,275,639.
Poehler, Guenter, Waldmann, and Corr. 3,275,692.
Siebel, Hans P., and Otto. 3,275,712.
Steinbrunn, Gustav, Fischer, and Flickinger. 3,275,670.

Baechtel, Clarence R., to Westinghouse Air Brake Co. Fluid pressure brake system. 3,275,383, 9–27–66, Cl. 303—18.

Bailey, Bruce L., B. Y. Karagoz, and P. Peller, to Great Lakes Carbon Corp. Fabrication of carbon and graphite bodies. 3,275,488, 9–27–66, Cl. 156—89.

Bailey, David N. Metal storm door and stop therefor. 3,274,733, 9–27–66, Cl. 49—387.

Bailey, Dean C., to Motorola, Inc. Integrated circuit bistable multivibrator. 3,275,846, 9–27–66, Cl. 307—88.5.

Bair, Daniel L.: *See*—
Keith, Carl D., and Bair. 3,275,567.

Baits, Stephen S., to Sundstrand Corp. Pump or motor wobbler mounting. 3,274,948, 9–27–66, Cl. 103—162.

Baizer, Manuel M., to Monsanto Co. Substituted aryloxyalkylene amines. 3,275,629, 9–27–66, Cl. 260—247.7.

Baker, Robert L. Frequency controlled tuning fork oscillator. 3,275,947, 9–27–66, Cl. 331—27.

Baker, Ronald A.: *See*—
McHugh, John W., and Baker. 3,275,902.

Bakker, Pieter M., and H. Buesink, to Shell Oil Co. Production of surface-active ether sultonates. 3,275,682, 9–27–66, Cl. 260—513.

Balch, George. Comparison calculator. 3,275,235, 9–27–66, Cl. 235—84.

Baldwin Electronics, Inc.: *See*—
Mountjoy, Garrard. 3,276,010.

Banewicz, John J., G. R. Argue, and R. F. Stewart, to Self-Organizing Systems, Inc. Electrochemical coulometer and method. 3,275,903, 9–27–66, Cl. 317—231.

Banks, Allan P., to Distington Engineering Co. Ltd. Method of constructing a casting mould by determination of isothermal pattern. 3,274,652, 9–27–66, Cl. 22—193.

Banner Co., The: *See*—
Fregeolle, Donat H. 3,274,801.

Banner Metals, Inc.: *See*—
Wilson, James D. 3,275,188.

Bapseres, Pierre A., and M. Biensan, to Societe Nationale des Petroles d'Aquitaine. Process for preparing organic sulfides. 3,275,693, 9–27–66, Cl. 260—608.

Bard Pharmaceutical Inc.: *See*—
Broh-Kahn, Robert H., and Galat. 3,275,642.

Barenok, Paul R.: *See*—
Wilson, Lee, and Barenok. 3,275,309.

Barlow, Conrad R., to Transiand Aircraft, Inc. Air stream driven pumping system. 3,275,198, 9–27–66, Cl. 222—310.

Barlow Controls, Inc.: *See*—
Dresser, W. Robert. 3,275,888.

Barlow, David O., to E. I. du Pont de Nemours and Co. Extraction method for recovering amine oxide salts from aqueous solutions. 3,275,673, 9–27–66, Cl. 260—459.

Barnes Engineering Co.: *See*—
Mottitt, Guy R., Jr., and Weiss. 3,275,833.

Barnett, Douglas, and D. L. Brook, to S. G. Brown Ltd. Gyroscopic compasses. 3,274,696, 9–27–66, Cl. 33—226.

Barnett, Robert E., and J. M. Dines, to The Eagle-Picher Co. Battery grid. 3,275,473, 9–27–66, Cl. 136—64.

Barr, Irwin R., to Aircraft Armaments, Inc. Container and method relating to telescopically expanded diaphragms. 3,275,193, 9–27–66, Cl. 222—1.

Barry Wright Corp.: *See*—
Johnson, Kenneth W. 3,275,276.

Bartelt Engineering Co., Inc.: *See*—
Beert, Carl J. 3,274,971.

Bartik, William J., to Sperry Rand Corp. Parametric device. 3,275,839, 9–27–66, Cl. 307—88.

Bartlett, Joseph E. Components for faucet valve washer replacement. 3,275,287, 9–27–66, Cl. 251—88.

Bartlett, William F., and B. Brightman, to General Dynamics Corp. Multiple shift register buffer store. 3,275,993, 9–27–66, Cl. 340—172.5.

Barto, William J., to Eaton Yale & Towne Inc. Safety arrangement for engine operated accessory. 3,275,177, 9–27–66, Cl. 214—650.

Batcheller, Kent J. Snap-action electric switch. 3,275,768, 9–27–66, Cl. 200—76.

Bates, Mortimer C., and C. H. King. Lid latch. 3,275,363, 9–27–66, Cl. 292—228.

Battison, Alvin H., and H. C. Scheer to International Business Machines Corp. Method of updating a record member. 3,275,439, 9–27–66, Cl. 96—41.

Battista, Orlando A., to FMC Corp. Shaped articles containing cellulose crystallite aggregates having an average level-off D.P. 3,275,580, 9–27–66, Cl. 260—17.4.

Batzer, Hans: *See*—
Widner, Gustav, Batzer, and Nikles. 3,275,661.

Bauer, Robert D., to Phillips Petroleum Co. Polymerization of olefins. 3,275,707, 9–27–66, Cl. 260—683.15.

Baum, Lester A. H., P. F. Bruins, and L. Henschel, to Mobil Oil Corp. Asphalt-containing compositions and method for their preparation. 3,275,585, 9–27–66, Cl. 260—28.

Bauriedel, Friedrich, W. Franke, and H. Lang, to E. I. du Pont de Nemours and Co. Photographic sensitizing dyes and emulsions. 3,275,444, 9–27–66, Cl. 96—105.

Baycura, Orestes M., to International Business Machines Corp. Magnetic cross-field devices and circuits. 3,275,842, 9–27–66, Cl. 307—88.

Beal, Jacques: *See*—
Zwobada, Rene, Piatti, and Beal. 3,275,866.

Beatenbough, Paul K., and R. W. Bishop, to General Motors Corp. Crossflow radiators. 3,275,070, 9–27–66, Cl. 165—111.

Beattie, John R., to Pilkington Bros. Ltd. Radiant-type cooler in apparatus for producing glass in ribbon form. 3,275,430, 9–27–66, Cl. 65—204.

Beatty, Donald C. Self-regulating compression amplifier. 3,275,946, 9–27–66, Cl. 330—141.

Bechtold, Max F., to E. I. du Pont de Nemours and Co. Biaxially oriented film of acrylonitrile polymers and process. 3,275,612, 9–27–66 Cl. 260—88.7.

Beck, Eugene: *See*—
Meyer, Kenneth I., and Beck. 3,275,922.

Becker, John: *See*—
Stierli, Robert F., and Becker. 3,275,579.

Becker, Stephen P., to Fargo Mfg. Co., Inc. Hinged dead end. 3,274,654, 9–27–66, Cl. 24—125.

Beckman Instruments, Inc.: *See*—
Boronkay, Attila D. 3,275,533.
Place, Thomas M., Sr. 3,274,669.

Bedingfield, Robert C., to Bell Telephone Laboratories, Inc. Trapezoidal test signal generator with leading and trailing edge control. 3,275,851, 9–27–66, Cl. 307—88.5.

Beecher Products Co.: *See*—
Bernard, Arthur A., and R. A. 3,275,796.

Beeley, Howard K., to Klamath-Ward, Inc. Edger. 3,275,045, 9–27–66, Cl. 143—37.

Beert, Carl J., to Bartelt Engineering Co., Inc. Carton closing machine. 3,274,971, 9/27/66, Cl. 118—239.

Behnke, Howard N., to Collins Machinery Corp. Rapid indexing of pipe threading apparatus. 3,274,627, 9–27–66, Cl. 10—98.

Belk, Wilber C., to FMC Corp. Method of sectionising citrus fruit. 3,275,052, 9–27–66, Cl. 146—236.

Bell Aerospace Corp.: *See*—
Earl, Thomas D., and Eggington. 3,275,270.

Bell, Chester G., to Digital Equipment Corp. Multistable circuit. 3,275,848, 9–27–66, Cl. 307—88.5.

Bell & Howell Co.: *See*—
Cherniavskyj, Jaroslav. 3,275,253.
Cherniavskyj, Jaroslav. 3,275,257.
Johnson, William A. 3,275,399.
Petelle, James F. 3,275,395.

Bell, Ross L., and W. L. Werner, to Granger Associates. Logarithmic periodic antenna. 3,276,027, 9–27–66, Cl. 343—792.5.

Bell Telephone Laboratories, Inc.: *See*—
Bedingfield, Robert C. 3,275,851.
Bobeck, Andrew H. 3,275,997.
Brady, Paul T. 3,275,759.
Caldwell, William N., Ericsson, Prescott, and Whidden. 3,275,279.
Dick, George W. 3,275,999.
Hall, Norris R., Ham, Hostetler, Hutchinson, and Strommen. 3,275,755.
Harding, Philip A., and Siegel. 3,275,840.
Hynes, Roger P., and Walsh. 3,275,881.
King, John H. 3,275,971.
Lepselter, Martin P. 3,274,670.
Neuman, Peter G. 3,275,992.
Rothrock, Stanley H. 3,275,853.

Bell, Vincent G., Jr., to Safeguard Corp. Adjustable frame structure for air filters and the like. 3,274,759, 9–27–66, Cl. 55—482.

Bell, William B.: *See*—
Williams, Robert L., Corner, and Bell. 3,275,061.

Bellenger, Michel: *See*—
Rocherolles, Raymond, and Bellenger. 3,275,937.

Beltrami, Aurelio L. Simultaneous multiple two-way multiplex communicator systems. 3,275,746, 9–27–66, Cl. 178—6.8.

Bemis Bro. Bag Co.: *See*—
Roth, Donald J., Zeller, and Kindseth. 3,275,498.

Bendix Corp., The: *See*—
Lavin, Thomas J. 3,275,944.
Medlinski, William W. 3,275,917.
Moses, Kurt, and Hartog. 3,275,810.
Pfeifer, Gunther. 3,275,381.
Segall, Louis H., Morrison, and Knak. 3,275,884.
Witzke, Frederick W. 3,274,693.

Benmussa, Henri, and M. J. Clerc, to International Standard Electric Corp. Electronic translator. 3,275,753, 9–27–66, Cl. 179—18.

Benson, John O., to General Mills, Inc. Continuous deep fat fryer. 3,274,920, 9–27–66, Cl. 99—404.

Beresford, James & Son Ltd.: *See*—
Kren, Robert. 3,275,662.

Berezansky, John D., and G. D. Gdovichin, to Jacbo, Inc. Magnetic and speed responsive flow device. 3,275,011, 9–27–66, Cl. 137—53.

Berger, Christian D., to The Hoover Co. Hot wire motor which oscillates at the same frequency as the input. 3,275,858, 9–27–66, Cl. 310—4.

Berger, S. Edmund: *See*—
Wooster, George S., and Berger. 3,275,709.

Bergey, John M., to Hamilton Watch Co. Velocimeter incorporating a drag lisc with conductive laminations. 3,275,767, 9–27–66, Cl. 200—61.45.

Berkeley Pump Co.: *See*—
McCracken, Paul B. 3,274,938.

Bernard, Arthur A. and R. A., to Beecher Products Co. Arc welding control system. 3,275,796, 9–27–66, Cl. 219—130.

Bernard, Richard A.: *See*—
Bernard, Arthur A. 3,275,796.

Bernstein, Carl, and K. Longley, to Witco Chemical Co., Inc. Mixed ester of polycarboxylic acids (25% aromatic dicarboxylic) with ethylene oxide adduct. 3,275,678, 9–27–66, Cl. 260—475.

Bernstein, Seymour: *See*—
Cantrell, Edward W., and Bernstein. 3,275,624.

Berry, Frank, to Differential Hydraulics, Inc. Rotary powder device. 3,274,943, 9–27–66, Cl. 103—125.

Berton, Pierre, to Office National d'Etudes et de Recherches Arospatiales, called O.N.E.R.A. Hot gas generators and in particular rocket motors. 3,274,775, 9–27–66, Cl. 60—39.47.

Bertouille, Robert W. *See*—
Turck, William B., and Bertouille. 3,275,353.

Bestt Roller Inc.: *See*—
Stoddart, Kenneth R. 3,275 490.

Betterton, Jesse O., Jr., G. D. Kneip, Jr., D. S. Easton, and J. O. Scarbough, to United States of America, Atomic Energy Commission. Method for increasing the critical current density of hard superconducting alloys and the improved products thereof. 3,275,480, 9–27–66, Cl. 148—2.

Beverly, Robert E., Jr., to Zac-Lac Paint & Lacquer Corp. Device for measuring liquid in containers. 3,274,690, 9–27–66, Cl. 33—126.7.

Bexten, Eugen, to International Harvester Co. Crawler tractor suspension. 3,275,386, 9–27–66, Cl. 305—10.

Beylik, John R. Method of lining water wells and noncorrosive liner therefor. 3,275,081, 9–27–66, Cl. 166—228.

Biedermann, Friedrich, G. Fauth, F. Jakob, H.-P. Simson, and E. V. Wasielewski, to Agfa Aktiengesellschaft. Camera focusing devices. 3,274,914, 9–27–66, Cl. 95—44.

Biedermann, Klaus, F. Jakob, A. Kubitzek, and H.-P. Simson, to Agfa Aktiengesellschaft. Focusing apparatus for cameras and the like. 3,274,913, 9–27–66, Cl. 95—44.

Bien, Alfred A., to Chrysler Corp. Fastener arrangement. 3,274,638, 9–27–66, Cl. 16—86.

Biensan, Michel: *See*—
Bapseres, Pierre A., and Biensan. 3,275,693.

Binkowski, Edward J., to Pyrotemp Corp. Pyrometric lance apparatus. 3,275,479 9–27–66, Cl. 136—233.

Birr, Edmund E., to Televiso Electronics, Division of Doughboy Industries, Inc. Double sideband suppressed-carrier, balanced-modulator circuit. 3,275,950, 9–27–66, Cl. 332—43.

Bishop, Robert W.: *See*—
Beatenbough, Paul K., and Bishop. 3,275,070.

Bixler, Kenneth D., to Diamond International Corp. Label pack. 3,275,134, 9–27–66, Cl. 206—65.

Black Clawson Co., The: *See*—
Du Bois, Gary B. 3,275,254.

Black, William A. P., E. T. Dewar, and D. Rutherford, to United States of America, Agriculture. Carbohydrate derived polymers of acrylonitrile. 3,275,582, 9–27–66, Cl. 260—17.4.

Blackford, William, to General Electric Co. Semiconductor device mounting with embedded thermal matching contact members. 3,275,907, 9–27–66, Cl. 317—234.

Bladh, Per V. H.: *See*—
Ekegren, Sven G., and Bladh. 3,275,142.

Blais, Robert L., to The Kaydon Engineering Corp. Roller bearing. 3,275,391. 9–27–66, Cl. 308—174.

Blake, Gilbert D.: *See*—
Holzinger, Rudolph J., Reid, and Blake. 3,275,102.

Blanchard, Clayton H., and K. S. McIntosh, to LRC Electronics Inc. Variable capacitor. 3,275,913, 9–27–66, Cl. 317—249.

Bleyle, Gustave A., Jr.: *See*—
Waldron, Stoddard S., and Bleyle. 3,275,345.

Blizard, Robert B., to Schlumberger Well Surveying Corp. Acoustic well logging apparatus. 3,275,095, 9–27–66, Cl. 181—.5.

Bloch, Erich, to Aeronautical Machinery Corp. Hoisting truck having piston actuated parallelogram bars. 3,275,297, 9–27–66, Cl. 254—10.

Bloomster, Clarence H., and J. J. Hauth, to United States of America, Atomic Energy Commission. Nuclear fuel element incorporating helical fissionable wire. 3,275,525, 9–27–66. Cl. 176—73.

Blum, Joseph L., Jr. Interlocking wallboard. 3,274,743, 9–27–66. Cl. 52—284.

Blum, Louis, and W. J. Horgan, Jr., to Blumcraft of Pittsburgh. Mounting for handrailing. 3,274,744, 9–27–66. Cl. 52—704.

Blumcraft of Pittsburgh: *See*—
Blum, Louis, and Horgan. 3,274,744.

Bobeck, Andrew H., to Bell Telephone Laboratories, Inc. Magnetic information storage unit utilixing conductive ring coupling. 3,275,997, 9–27–66, Cl. 340—174.

Bochan, John, to General Electric Co. Filter with cleaning means. 3,275,143, 9–27–66, Cl. 210—120.

Boehnke, Klaus J.: *See*—
Felder, Hans C., Schilling, Zennig, and Boehnke. 3,275,234.

Boehring, C. F. & Soehne G.m.b.H.: *See*—
Winter, Werner, Stach, and Schumann. 3,275,657.

Boehringer, C. H. Sohn: *See*—
Sehring, Richard, and Zelle. 3.275,718.

Boehringer Ingelheim G.m.b.H.: *See*—
Müller, Erich, and Hasspacher. 3,275,625.

Boeing Co., The: *See*—
Williams, Robert L., Corner, and Bell. 3,275,061.

Bogs, Charles W., and R. R. Tharp, to Esso Production Research Co. Apparatus and method for normalizing or equalizing seismogram traces. 3,275,982, 9–27–66, Cl. 340—15.5.

Bogue, Leonard E. Mail box signal device. 3,275,227, 9–27–66, Cl. 232—34.

Bohunek, Johann, to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Bruning. Process for the manufacture of phosphate ester derivatives of polyalkylene glycols. 3,275,667, 9–27–66. Cl. 260—403.

Bolger, John C., to Allied Chemical Corp. Transfer tail winding. 3,275,252. 9–27–66. Cl. 242—18.

Bolles, Charles P., General Motors Corp. Fluid level indicators. 3,274,691, 9–27–66. Cl. 33—126.7.

Bond, William B., to E. I. du Pont de Nemours and Co. Stabilized polyamide containing (A) a copper compound and (B) a nitrogen containing antioxidant. 3,275,594, 9–27–66, Cl. 260—45.75.

Bonefant, Leo J., and G. T. Thurston, to General Electric Co. Electrical capacitor and method of making the same. 3 274,663, 9–27–66, Cl. 29—25.42.

Bonitz, Eckhard, and M. Daeuble, to Badische Anilin- & Soda-Fakrik Aktiengesellschaft. Dyeing polyolefiin materials. 3,275,400. 9–27–66, Cl. 8—4.

Bonyhard, Peter I., to Intenational Computers and Tabulators Ltd. Thin film magnetic memory matrix. 3,275,998, 9–27–66, Cl. 340—174.

Bopp, Cecil W., to The Greater Iowa Corp. Lifting fork for sheet material. 3,275,367, 9–27–66, Cl. 294—67.

Bopp & Reuther G.m.b.H.: *See*—
Jünger, Carl. 3,274,894.

Boronkay, Attila D., to Beckman Instruments, Inc. Method and apparatus for automatic titration. 3,275,533, 9–27–66, Cl. 204—1.

Bosch, Robert G.m.b.H.: *See*—
Vielmo, Oskar, and Muller. 3,275,385.

Bose, Robert N., to Whirlpool Corp. Underground gas diffusion system. 3,274,730, 9–27–66, Cl. 47—1.

Bosna, Alexander, L. D. Sorg, and W. F. Schmidt, to Westinghouse Electric Corp. Welding apparatus. 3,275,795, 9–27–66, Cl. 219—125.

Bostrom Corp.: *See*—
Radke, Arthur O., Oswald, and Champa. 3,275,372.

Boteler, Henry W., to Grinnell Corp. Diaphragm valve body flange construction. 3,275,292, 9–27–66, Cl. 251—331.

Bottenbruch, Ludwig: *See*—
Schnell, Hermann, Bottenbruch, and Krimm. 3,275,601.

Bottenbruch, Lugwig, and H. Schnell, to Farbenfabriken Bayer Aktiengesellschaft. Process for the manufacture of carbonic acid esters. 3,275,674, 9–27–66, Cl. 260—463.

Bouteille, Charles Y. J. Method and apparatus for electrostatic separation of fine powders. 3,275,139, 9–27–66, Cl. 209—129.

Bouyoucos, John V. Hydroacoustic transducer with centering means. 3,275,977, 9–27–66, Cl. 340—15.

Bowen, Max E. Single dose foamed medication applicator. 3,275,000, 9–27–66, Cl. 128—272.

Bower, Joseph G., to United States Borax & Chemical Corp. Polymeric organoboron compounds. 3,275,600, 9–27–66, Cl. 260—47.

Bowers, Albert, to Syntex Corp. 19-amino-Δ^4-pregnenes and 10α-pregnenes and process for their preparation. 3,275,621, 9–27–66, Cl. 260—239.55.

Bowers, Albert, to Syntex Corp. 19-alkylidene-$\Delta^{4,3,20}$-keto pregnenes. 3,275,622, 9–27–66, Cl. 260—239.55.

Bowers, Albert, and O. Halpern, to Syntex Corp. $\Delta^{1(10),4}$-19-nor pregnadienes and process therefor. 3,275,656, 9–27–66, Cl. 260—239.55.

Bowles Engineering Corp.: *See*—
Colston, John R. 3,275,013.

Box, E. O., Jr., to Phillips Petroleum Co. Dehydrogenation catalyst. 3,275,705, 9–27–66, Cl. 260—683.3.

Boyd, Gil R.: *See*—
Nelson, Wayne F., and Boyd. 3,275,080.

Boyd, James A.: *See*—
Johnson, Billie L., and Boyd. 3,275,335.

Boyer, Charles J., to The Electric Storage Battery Co. Headshield. 3,273,614, 9–27–66, Cl. 2—14.

Bradfute, John H.: *See*—
Peickii, Vasalie L., Christensen, and Bradfute. 3,275,352.

Brady, Paul T., to Bell Telephone Laboratories, Inc. Break-in arrangement with compensation for variations in the trans-hybrid loss for echo suppressors. 3,275,759, 9–27–66, Cl. 179—170.6.

Brandt, Herbert. Electrostatic precipitators. 3,274,753, 9–27–66, Cl. 55—111.

Brandt, John H. Rifle bolt mechanism. 3,274,724, 9–27–66, Cl. 42—16.

Brastins, Auseklis, to Westinghouse Electric Corp. Full binary adder using one tunnel diode. 3,275,813, 9–27–66, Cl. 235—176.

Braun, Robert A., to E. I. du Pont de Nemours and Co. Coating compositions comprising substituted guanidine drying accelerators. 3,275,463, 9–27–66, Cl. 106—287.

Breakspear, Francis B., to The British Oxygen Co. Ltd. Apparatus for practising and teaching expired air artificial respiration. 3,274,705, 9–27–66, Cl. 35—17.

Brechlin, Alfred: *See*—
Fuchs, Otto, Deubel, Brechlin, Bühner, and Feess. 3,275,401.

Brechling, George E., to Electro-Mechanical Research, Inc. A.C. to D.C. converters. 3,275,941, 9–27–66, Cl. 329—101.

Brenner, Carl M., and H. R. Rickenbacher, to Geigy Chemical Corp. Process for the preparation of L-α-amino-E-caprolactam and intermediate therefor. 3,275,619, 9–27–66, Cl. 260—239.3.

Breslow, David S., to Hercules Inc. Polyolefins of improved light stability and dye receptivity containing chromium phenolates. 3,275,595, 9–27–66, Cl. 260—45.75.

Breunsbach, Rex L.: *See*—
Allen, Kenneth M., Van Dyke, and Breunsbach. 3,275,136.

Briggs, Norman M.: *See*—
Rathke, Harry C., and Briggs. 3,275,465.

Brightman, Barrie: *See*—
Bartlett, William F., and Brightman. 3,275,993.

Bristol Siddeley Engines Ltd.: *See*—
Dakin, Robin M. 3,274,773.

Bristow, Robert H., and H. Affleck III, to General Electric Co. Method of production of a dispenser cathode. 3,275,435, 9–27–66, Cl. 75—201.

British Iron and Steel Research Association, The: *See*—
Knowles, Keith. 3,274,819.

British Oxygen Co. Ltd., The: *See*—
Breakspear, Francis B. 3,274,705.

British Titan Products Co. Ltd.: *See*—
Emeleus, Harry J., and Howden. 3,275,570.
Stanley, Robert H., and Howden. 3,275,568.
Stanley, Robert H., and Howden. 3,275,569.

Broh-Kahn, Robert H., and A. Galat, to Bard Pharmaceutical Inc. 3-pyridine carbinol nitrate and its preparation. 3,275,642, 9–27–66, Cl. 260—297.

Brokaw, Roscoe T., to The Sun Tool & Machine Co. Edge tooling apparatus. 3,274,736, 9–27–66, Cl. 51—105.

Brook, David L.: *See*—
Barnett, Douglas, and Brook. 3,274,696.

Brotherton, Thomas K., J. W. Lynn, and R. J. Knopf, to Union Carbide Corp. Bis(isocyanotoalkyl or phenyl) trans-9,10-dihydroanthracene 9,10-endo α,β-succinates. 3,275,679, 9–27–66, Cl. 260—475.

Brown, Arlie L., N. F. Cook, H. E. Hackney, E. J. Hulsey, C. H. Mueller, J. B. Wegmann, and W. C. Swanker to The McNeil Corp. Record player. 3,275,327, 9–27–66, Cl. 274—10.

Brown Fintube Co.: *See*—
Brown, John W., Jr., A. C. Buesing, and F. T. Kaiser. 3,275,244.

Brown, John W., Jr., A. C. Buesing, and F. T. Kaiser, to Brown Fintube Co. Apparatus for introducing addition agent into a melt. 3,275,244, 9–27–66, Cl. 239—345.

Brown, Joseph P., to Monsanto Chemicals Ltd. 4-substituted-aliphatic - 2,2-dialiphatic-1,2-dihydroquinolines. 3,275,628, 9–27–66, Cl. 260—247.5.

Brown, S. G., Ltd.: *See*—
Barnett, Douglas, and Brook. 3,274,696.

Brownawell, Darrell W., and W. C. Holliyay, Jr. to Esso Research and Engineering Co. Middle distillate fuel composition. 3,275,427, 9–27–66, C. 44—62.

Bruckmayer, Georg, Dr., Flottweg-Motorenwerk: *See*—
Hiller, Georg. 3,275,230.

Bruins, Paul F.: *See*—
Baum, Lester A. H., Bruins, and Henschel. 3,275,585.

Brundrett, Leon P., to Phillips Petroleum Co. Blending apparatus. 3,275,304, 9–27–66, Cl. 259—180.

Brunger, Ronald N., to International Harvester Co. Lamp assembly for motor vehicles. 3,275,816, 9–27–66, Cl. 240—8.22.

Brunner, John E., to Aeronca Mfg. Corp. Dual frequency Gregorian-Newtonian antenna system with Newtonian feed located at common focus of parabolic main dish and ellipsoidal sub-dish. 3,276,022, 9–27–66, Cl. 343—727.

Brunot, Jean-Paul, to Centre de Recherches de Pont-A-Mousson. Pressure regulator and a hydraulic control device including said regulator for an automobile gearbox. 3,274,857, 9–27–66, Cl. 74—752.

Brunson, Marion O., and J. E. Huffaker, to Eastman Kodak Co. Embossed article for 3-dimensional printing comprising a hot melt coating. 3,275,494, 9–27–66, Cl. 161—33.

Bryan, Samuel, and W. B. Udell, to W. B. U. ell. Sound reproducing apparatus. 3,275,758, 9–27–66, Cl. 179—116.

Bryant, Carrell C.: *See*—
Karoly, John A., and Bryant. 3,275,249.

Buck, Ivan E., Jr., and H. Bullinger, to Westinghouse Electric Corp. Ceramic-type electroluminescent device with moisture penetration prevention seal. 3,275,870, 9–27–66, Cl. 313—108.

Bucksteeg, Wilhelm, and H. Thiele. Method of treating sewage. 3,275,547, 9–27–66, Cl. 210—5.

Budĕšinský, Zdeněk, V. Jelínek, and J. Přikryl, to Spofa, Sdruzení podniku pro zdravotnickou vyrobu. 4-hydroxy-5 fluoro pyrimidine and a process for producing it and other compounds. 3,275,633, 9–27–66, Cl. 260—251.

Buesing, Arthur C.: *See*—
Brown, John W., Jr., Buesing, and Kaiser. 3,275,244.

Buesink, Hendrik: *See*—
Bakker, Pieter M., and Buesink. 3,275,682.

Bühner, Hans: *See*—
Fuchs, Otto, Deubel, Brechlin, Bühner, and Feess. 3,275,401.

Builders Equipment Co.: *See*—
Mizer, Bill L., R. T., and Whitehurst. 3,274,660.

Bulka, Raymond I.: *See*—
McCain, William B., and Bulka. 3,275,118.

Bullinger, Hans: *See*—
Buck, Ivan E., Jr., and Bullinger. 3,275,870.

Bunker-Ramo Corp., The: *See*—
Schneberger, Edward J. 3,275,991.

Bunting, Ernest V., to Massey-Ferguson Inc. Tractor hydraulic control system. 3,275,084, 9–27–66, Cl. 172—9.

Bunting, Ernest V., and E. J. Skiba, to Massey-Ferguson Inc. Power operating and control system for tractors. 3,275,085, 9–27–66, Cl. 172—10.

Burndy Corp.: *See*—
Mileikowsky, Hovav, Horvath, and Rosner. 3,274,630.

Burns, Joseph R., to Radio Corp. of America. Driver-sense circuit arrangement. 3,275,996, 9–27–66, Cl. 340—173.

Burnside, Walter M. Amusement device with changeable score control mechanism. 3,275,322, 9–27–66, Cl. 273—119.

Burnside, Walter M. Surface projectile game having additional target scoring means. 3,275,324, 9–27–66, Cl. 273—126.

Burroughs Corp.: *See*—
Cassidy, Carl R., and Meyerhoff. 3,275,930.
Glasser, Edward L., and Gerlach. 3,275,989.
Meyerhoff, Albert J. 3,275,843.
Simmons, John G. 3,275,844.

Burt, Harold R.: *See*—
Campbell, H. Albert, Jr., and Burt. 3,275,256.

Bush, Edmund H., to Firth Cleveland Ltd. Ventilating rans. 3,275,224, 9–27–66, Cl. 230—125.

Butler, Harry S., to Ethyl Corp. Stabilizer for trimethylphosphate. 3,275,717, 9–27–66, Cl. 260—963.

Butler, Jesse L. Phase control arrangements for a multiport system. 3,276,018, 9–27–66, Cl. 343—100.

Buvet, René, to Electricite de France-Service National. Oxygen power electrodes. 3,275,474, 9–27–66, Cl. 136—86.

Bylsma, Harold R., to The Dow Chemical Co. Phenolic adducts of diphenyloxides or biphenyls, with epoxy resins. 3,275,708, 9–27–66, Cl. 260—830.

C.S.F.-Compagnie Generale de Telegraphie Sans Fil: *See*—
Grosvalet, Jean. 3,275,908.
Honore, Etienne, and Torcheux. 3,276,009.
Rocherolles, Raymond, and Bellenger. 3,275,937.

Cable-Clean Corp.: *See*—
Stevenson, Clair V. 3,274,633.

Cahill, Bernard S., to National Rejectors, Inc. Method and apparatus for detecting currency. 3,275,138, 9–27–66, Cl. 209—111.7.

Calco Mfg. Co.: *See*—
Forsmark, Harold R. 3,274,853.

Caldwell, John, and R. H. Telfer, to The English Electric Co. Ltd. Turbine blade with tapered one-piece erosion shield. 3,275,295, 9–27–66, Cl. 253—77.

Caldwell, William N., J. W. Ericsson, R. E. Prescott, and W. E. Whidden, to Bell Telephone Laboratories, Inc. Telephone directory cover and holder. 3,275,279, 9–27–66, Cl. 248—447.

California Institute Research Foundation: *See*—
Ainis, Herman. 3,275,528.

Caller, James M., to United States of America, Atomic Energy Commission. Coaxial cable terminating means. 3,275,737, 9–27–66, Cl. 174—89.

Calmac Corp.: *See*—
MacCracken, Calvin D. 3,274,990.

Cameron Iron Works, Inc.: *See*—
Gruller, David L. 3,275,032.
Kowalski, Ludwig R. 3,275,025.

Campbell, H. Albert, Jr., and H. R. Burt, to K.W.F. Industries, Inc. Sectional tape spool construction. 3,275,256, 9–27–66, Cl. 242—71.8.

Campbell, Robert G. Display means. 3,275,818, 9–27–66, Cl. 240—10.

Campbell, Robert L., and M. B. Kudsi, to United Aircraft Products Inc. Plate-type evaporative cooler and wick therefor. 3,275,074, 9–27–66, Cl. 165—166.

Campbell Soup Co.: *See*—
Glide, Louis C. 3,275,147.

Campbell, Thomas M., Jr., and W. Markert, Jr., to United States of America, Atomic Energy Commission. Nuclear reactor wet thermal insulation. 3,275,523, 9–27–66, Cl. 176—44.

Canada Packers Ltd.: *See*—
Ziegler, Peter, and Grivas. 3,275,665.

Canadian General Electric Co., Ltd.: *See*—
Ulug, Mehmet E. 3,275,876.

Canadian Industries Ltd.: *See*—
Chu, Ning Jo. 3,275,627.

Cannon, Paul L., Jr., and D. N. Kramer, to United States of America, Army. Bioelectric method for the detection of anticholinester-gases. 3 275,534, 9–27–66, Cl. 204—1.

Cantrall, Edward W., and S. Bernstein, to American Cyanamid Co. Estra-1,3,5(10)-trienes having solubilizing groups. 3,275,624, 9–27–66, Cl. 260—239.55.

Cappuccio, Vittorio E., to Montecatini Societa Generale per l' Industria Minerarla e Chimica. Process and apparatus for manufacturing tubular films of synthetic thermoplastic materials. 3,275,723, 9–27–66, Cl. 264—70.

Carabateas, Philip M., to Sterling Drug Inc. 4-acyloxy-4-aryl-1-(arylaminoalkyl) piperidines and their preparation. 3,275,641, 9–27–66, Cl. 260—294.

Carangelo, Pasquale S.; ⅓ each to, A. Celentano, and A. P. Dello. Containers and closures therefor. 3,275,214, 9–27–66, Cl. 220—17.

Card, Londa Y. Infant-holding attachment for automobile seats. 3,275,373, 9–27–66, Cl. 297—389.

Carlson, Charles J., Jr., and D. J. Farmer, to Central Transformer Corp. Transformers equipped with circuit interrupter. 3,275,890. 9–27–66, Cl. 317—15.

Carlson, Heinz F., to FMC Corp. Plate inverting mechanism. 3,275,122, 9–27–66, Cl. 198—33.

Carlsson, Stig A. I.: *See*—
Flodin, Per G. M., Johansson, and Carlsson. 3,275 576.

Carnaud, J. J. & Forges De Basse-Indre, Etablissements: *See*—
Petin, Jean. 3,275,537.

Carr, Hugh B., to S. P. Kinney Engineering, Inc. Disc-type strainer. 3,275,151, 9–27–66, Cl. 210—333.

Carrier Corp.: *See*—
McGrath, William L. 3,275,068.

Carsello, Richard D., and D. L. Gunn, to Motorola, Inc. Frequency modulation circuit. 3,275,938, 9–27–66, Cl. 325—349.

Carsey, Eugene A., to The Kirk & Blum Mfg. Co. Dust control apparatus for metal working machines. 3,274,892, 9–27–66 Cl. 90—24.

Carter, Joseph C., and M. B. Rodin, to United States of America, Atomic Energy Commission. Method and system for supplying thrust to a space vehicle. 3,274,770, 9–27–66, Cl. 60—203.

Case, J. I., Co.: *See*—
Ralston, Harold A. 3,275,341.

Cassidy, Carl R., and A. J. Meyerhoff, to Burroughs Corp. Superconducting controlled inductance circuits. 3,275,930, 9–27–66, Cl. 323—44.

Cataldo, Roy S., to General Motors Corp. Wave engine gastier. 3,274,777, 9–27–66, Cl. 60—39.77.

Caterpillar Tractor Co.: *See*—
Grant, Gerald E., and Helton. 3,274,908.

Cathers, George I., and J. C. Mailen, to United States of America, Atomic Energy Commission. Continuous-gas-phase volatility process. 3,275,422, 9–27–66, Cl. 23—325.

Catino, Sigmund C.: *See*—
Strobel, Albert F., and Catino. 3,275,462.
Strobel, Albert F., Catino, and Leibowitz. 3,275,520.

Caza, Roger M. Ink fountain roller interrupting means. 3,274,932. 9–27–66. Cl. 101—351.

Celanese Corp. of America: *See*—
Kray, Raymond J., and Stevenson. 3,275,604.

Celentano, Alfred: *See*—

Cushing, Vincent J. Electromagnetic flowmeter. 3,274,831, 9–27–66, Cl. 73—194.

Cushing, Walter V., to Westinghouse Electric Corp. Method for processing discharge lamps. 3,275,397, 9–27–66, Cl. 316—25.

Cushman, Everett H., to Air Reduction Co. Inc. High-speed butt-welding method and apparatus. 3,275,786, 9–27–66, Cl. 219—60.

Cutler-Hammer, Inc.: *See*—
Prosser, David C., and Ronning. 3,275,123.

Cutler, Neville G.: *See*—
Kassler, Henry, and Cutler. 3,275,499.

Czech, Clifford F., to McGraw-Edison Co. Dry cleaning machine. 3,274,807, 9–27–66, Cl. 68—12.

Czubak, Albin S., to Micromatic Home Corp. Expandable rotary boring tool. 3,274,861, 9–27–66, Cl. 77—58.

D-G Controls, Inc.: *See*—
Gage, Jack R., and Diamond. 3,275,058.

Daeuble, Manfred: *See*—
Bonitz, Eckhard, and Daeuble. 3,275,400.

Daiichi Seiyaku Kabushiki Kaisha: *See*—
Tsunoda, Kiyoshi, and Okuda. 3,275,508.

Dakin, Robin M., to Bristol-Siddeley Engines Ltd. Governor control for a fuel system of a gas turbine power-producing plant. 3,274,773, 9–27–66, Cl. 60—39.28.

Dana Laboratories, Inc.: *See*—
Walker, Norman C., and Engle. 3,275,945.

Daniel, Otton. Non-clogging water intake for water vessels. 3,274,970, 9–27–66, Cl. 115—.5.

Danna, Peter A.: *See*—
Cohn, Johann G. E., and Danna. 3,275,475.

Danner, Eugene G. Drive shaft arrangement for a fluid circulating device. 3,274,799, 9–27–66, Cl. 64—4.

Darling, L. A., Co., The: *See*—
Stackhouse, David W. 3,274,735.

D'Ascoli, Ralph G.: *See*—
O'Mara, Joseph B., and D'Ascoli. 3,274,688.

Daubenspeck, Benjamin K., to Remington Arms Co., Inc. Method and apparatus for treating toilet waste. 3,275,550, 9–27–66, Cl. 210—60.

Daul, George C., T. F. Drake, and M. W. Duke, to Courtaulds, Ltd. Formaldehyde modification of cellulose conducted in the presence of a stiffening agent and a Lewis acid metallic salt. 3,275,402, 9–27–66 Cl. 8—115.6.

Davies, Ben, and P. H. Havranek, to Harbison-Walker Refractories Co. Refractory. 3,275,461, 9–27–66, Cl. 106—58.

Davies, John H.: *See*—
Kirby, Peter, Roberts, and Davies. 3,275,646.

Davis, George B., Jr.: *See*—
Morrissey, Thomas G., Davis, and Short. 3,275,101.

Davis, Harold G., to Padde Pty. Ltd. Fire resistant door. 3,274,734, 9–27–66, Cl. 49—503.

Davis, William W., to Sperry Rand Corp. Memory device and method. 3,276,000, 9–27–66, Cl. 340—174.

Dawidowicz, Jan, to Eversharp, Inc. Laminated razor blade for injector razor. 3,274,686, 9–27–66, Cl. 30—348.

Dearman Co., Ltd.: *See*—
Baba, Kunio. 3,275,780.

De Buhr, Harold E.: *See*—
Soteropulos, Gust, de Buhr, and Gustafson. 3,274,761.

Debus, Karl, to Linotype G.m.b.H. Apparatus for symmetrically cutting a cast line. 3,274,876, 9–27–66, Cl. 83—415.

Debus, Karl, to Linotype G.m.b.H. Assembling apparatus for linecasting machines. 3,275,127, 9–27–66, Cl. 199—21.

Decker, George A., and D. B. Fisk, to General Electric Co. Recharger contacts for electric toothbrush. 3,275,919, 9–27–66, Cl. 320—2.

Deeg, Wyman L., to C. P. Clare & Co. Sequential counting circuit using differentially operated relays. 3,275,896, 9–27–66, Cl. 317—140.

Deere & Co.: *See*—
Kleckner, Richard M. 3,274,902.
Meyer, Raymond J., Jensen, and Wetrich. 3,274,858.
Soteropulos, Gust, de Buhr, and Gustafson. 3,274,761.

Dehlsen, James G. P., to The Parker Pen Co. Ball point pen incorporating a point reconditioning device. 3,274,975, 9–27–66, Cl. 120—1.

Delmund, Linder, L. P., and R. N. Tower crane with loading boom. 3,275,162, 9–27–66, Cl. 212—76.

Delmund, Richard N.: *See*—
Delmund, Linder, L. P., and R. 3,275,162.

Delmund, Richard N.: *See*—

Delacour, Jacques, and J. Parola, to Institut Francais du Petrole des Carburants et Lubrifiants. Well drilling apparatus. 3,275,300, 9–27–66, Cl. 254—175.7.

Dello, Anthony P.: *See*—
Carangelo, Pasquale S. 3,275,214.

De Lucia, Victor E. High-vacuum miniaturized relay. 3,275,776, 9–27–66, Cl. 200—144.

De Lucia, Victor E. Vacuum relay having improved contact electrodes. 3,275,783, 9–27–66, Cl. 200—166.

Demarest, Philip C., H. R. Foster, and E. E. Crump, to Ohmega Laboratories. Capsulated bulb and method of making the same. 3,275,879, 9–27–66, Cl. 313—317.

Demsey, John N., Jr., and J. A. Huber, to Aluminum Co. of America. Method of making a composite container. 3,274,905, 9–27–66, Cl. 93—94.

Dendix Brushes Ltd.: *See*—
Godfrey, Leonard R. 3,274,634.

Dennison Mfg. Co.: *See*—
McKechnie, William H. 3,275,219.

Desaules, Jean-Jacques, and H.-L. Henchoz, to Fabrique de'Horlogerie Chs. Tissot et Fils S.A. Fixing device of the inner end of a regulating hairspring in a timepiece. 3,274,766, 9–27–66, Cl. 58—115.

Deubel, Reinhold: *See*—
Fuchs, Otto, Deubel, Brechlin, Bühner, Feess, and Zimmermann. 3,275,401.

Deutsche Gold-und Silber-Scheideanstalt vormals: *See*—
Querfurth, Wilhelm. 3,275,593.

DeVibiiss Co., The: *See*—
Gauthier, William D., and Kock. 3,274,860.

Devices Inc.: *See*—
Neff, Robert E. 3,275,772.

De Vries, Jan W., to Organon Inc. Purification of fat mobilizing substances. 3,275,515, 9–27–66, Cl. 167—74.

Dewar, Eric T.: *See*—
Black, William A. P., Dewar, and Rutherford. 3,275,582.

DeWolf, Nicholas, to Teradyne, Inc. Relay control circuit. 3,275,899, 9–27–66, Cl. 317—148.5.

D'Haem, Marcel P.: *See*—
Fischer, Howard R., Marcantonio, and D'Haem. 3,274,903.

Diamond, Bernard: *See*—
Gage, Jack R., and Diamond. 3,275,058.

Diamond International Corp.: *See*—
Bixler, Kenneth D. 3,275,134.
Reifers, Richard F. 3,275,213.

Hauerbach, Markvard. 3,274,909.
Hauerbach, Markvard. 3,276,008.
Ort, George M. 3,275,563.

Dick, George W., to Bell Telephone Laboratories, Inc. Magnetic storage and transfer circuits. 3,275,999, 9–27–66, Cl. 340—174.

Diehl, Donald J.: *See*—
Hanson, Chris A. 3,274,849.

Diehl, Ward F., to General Motors Corp. Apparatus for fluid pressure measurement. 3,274,834, 9–27–66, Cl. 73—419.

Diemond, Joseph, M. Y. Gershman, H. L. Sundberg, Jr., and N. A. Vangsness, to Coleco Industries, Inc. Water-retaining recreational structure for swimming pools and the like. 3,274,621, 9–27–66, Cl. 4—172.

Diery, Helmut: *See*—
Kühne, Rudolf, Diery, and Kiefer. 3,275,672.

Diesel Equipment Ltd.: *See*—
MacRae, Allister S., and Martin. 3,275,170.

Dietrich, Verne E., to Spraying Systems Co. Apparatus for spray analysis. 3,275,744, 9–27–66, Cl. 178—6.

Differential Hydraulics, Inc.: *See*—
Berry, Frank. 3,274,943.

Digital Equipment Corp.: *See*—
Bell, Chester G. 3,275,848.

Dill, Robert F.: *See*—
Worson, Lee, and Dill. 3,274,906.

Dilling, Elmer D., to Titanium Metal Corp. of America. Rolling mill. 3,274,814, 9–27–66, Cl. 72—74.

Dines, James M.: *See*—
Barnett, Robert E., and Dines. 3,275,473.

Dinglewerke Aktiengesellschaft: *See*—
Reppert, Karl, and Konrad. 3,275,028.

Distington Engineering Co. Ltd.: *See*—
Banks, Allen P. 3,274,652.

Dobbyn, Geoffrey F., to Pneumatic Scale Corp., Ltd. Packaging machine. 3,275,043, 9–27–66, Cl. 141—142.

Doehlemann, Ernst, F. Kaess, and L. Reitter, to Suddeutsche Kalkstickstoff-Werke Aktiengesellicaft. Melamine production improvement. 3,275,632, 9–27–66, Cl. 260—249.7.

Dolberg, Ben. Stiffener for thin sheet material. 3,275,066, 9–27–66, Cl. 160—330.

Dole Valve Co., The: *See*—
Kolze, Lawience A. 3,275,237.

Dolfi, James J., Sr. Automatic vacuum spoiler for internal combustion engines. 3,274,984, 9–27–66, Cl. 123—124.

Dolman, Robert E.: *See*—
Rein, Edward N., and Dolman. 3,275,330.

Donaldson Co., Inc.: *See*—
Johnson, Billie L., and Boyd. 3,275,335.

Donovan, George J.: *See*—
Cohen, Murray S., Fein, Green, and Donovan. 3,275,483.

Doppelmayr, Emil. Cable operating control mechanism. 3,274,954, 9–27–66, Cl. 104—178.

Dore, Franklyn, to The Air Preheater Co., Inc. Method of making a heat exchanger. 3,274,672, 9–27–66, Cl. 29—157.3.

Dornbush, Clinton L., and W. H. Francillon, to Georgia-Pacific Corp. Box with laminated corrugated collar. 3,275,217, 9–27–66, Cl. 229—37.

Dorne and Margolin, Inc.: *See*—
Dorne, Arthur, Malech, and Satre. 3,276,023.

Dorne, Arthur, R. G. Malech, and W. Satre, Jr., to Dorne and Margolin, Inc. Grid array antenna. 3,276,023, 9–27–66, Cl. 343—754.

Dow Chemical Co., The: *See*—
Bylsma, Harold R. 3,275,708.

James, Robert C., D. A. Wilson, and F. E. Pringle, Jr., to Hayssen Mfg. Co. Method of and apparatus for packaging units in a preservative atmosphere. 3,274,746, 9–27–66, Cl. 53—22.

James, William A., and J. J. Wallace, to The Sherwin-Williams Co. Display device. 3,275,159, 9–27–66, Cl. 211—49.

Jampolsky, Lester M.: *See*—
Goldberg, Moses W., Jampolsky, and Kierstead. 3,275,691.

Janoski, Edward J., and R. E. Moore, to Sun Oil Co. Preparation of alkyladamantanes having an ethyl substituent. 3,275,700, 9–27–66, Cl. 260—666.

Janssen, Alexander P., to Acme Visible Records, Inc. Record filing device. 3,274,715, 9–27–66, Cl. 40—102.

Javaux, Gustave. Glass processing apparatus including a reciprocating roller. 3,275,429, 9–27–66, Cl. 65—185.

Jeanneret, Jean L., to Foseco International Ltd. Mold dressings for use in foundry practice. 3,275,460, 9–27–66, Cl. 106—38.22.

Jelínek, Václav: *See*—
Buděšínský, Zdeněk, Jelínek, and Přikryl. 3,275,633.

Jones, Jack W.: *See*—
Mayes, Fred M., and Jones. 3,275,805.

Jenney, Theodore M.: *See*—
Churchill, John W., and Jenney. 3,275,697.

Jennings, Jo E., to Jennings Radio Mfg. Corp. Electrically energized heat radiator. 3,275,874, 9–27–66, Cl. 313—183.

Jennings Radio Mfg. Corp.: *See*—
Hawkins, Jack S. 3,275,775.
Jennings, Jo E. 3,275,874.

Jensen, James K.: *See*—
Meyer, Raymond J., Jensen, and Wetrich. 3,274,858.

Jenson, Kenneth S., and F. W. Suhr, to Preway, Inc. Air heater. 3,274,989, 9–27–66, Cl. 126—110.

Jepson, Ivar, and G. R. Wolter, to Sunbeam Corp. Juice extractor attachment for mixer. 3,275,051, 9–27–66, Cl. 146—3.

Jewett, Eugene L., to Florida Brace Corp. Surgical brace. 3,274,996, 9–27–66, Cl. 128—78.

Jimenez, James A., and H. H. Olmsted. Bun divider and rounder. 3,274,959, 9–27–66, Cl. 107—68.

Johanson, Bengt J., and N. Oskerka, Jr. Connector. 3,275,970, 9–27–66, Cl. 339—143.

Johansson, Johan A. O.: *See*—
Flodin, Per C. M., Johansson, and Carlsson. 3,275,576.

Johns-Manville Corp.: *See*—
Irvin, Charles L. 3,275,727.
Mastrobattista, Alex A., and Fordon. 3,275,331.

Johnson, Billie L., and J. A. Boyd, to Donaldson Co., Inc. High-pressure seal. 3,275,335, 9–27–66, Cl. 277—180.

Johnson, Charles M., and J. E. Lowder, to Johnson Mfg. Co. Earth scraper with retractable bottom wall. 3,274,711, 9–27–66, Cl. 37—129.

Johnson, Keith O., to Ampex Corp. Saturable core pulse width modulator. 3,275,949, 9–27–66, Cl. 332—12.

Johnson, Kenneth W., to Barry Wright Corp. Self-locking clamp. 3,275,276, 9–27–66, Cl. 248—361.

Johnson Mfg. Co.: *See*—
Johnson, Charles M., and Lowder. 3,274,711.

Johnson, Oscar H. to Parker Mfg. Co. Stapler. 3,275,212, 9–27–66, Cl. 227—132.

Johnson, Philip E., 50% to M. C. Lessa. Combination cartridge. 3,274,934, 9–27–66, Cl. 102—38.

Johnson Service Co.: *See*—
Alyea, Harold W., Jurasinski, and Fliss. 3,275,031.

Johnson, William A., to Bell & Howell Co. Motion picture camera. 3,275,399, 9–27–66, Cl. 352—141.

Jolls, Lewis M.; deceased; and I. Timmons, administratrix. Mounting for mower attachment. 3,274,762, 9–27–66, Cl. 56—25.4.

Jones, Dwight C., to Earthcavator Co., Inc. Retractable scarifier. 3,274,712, 9–27–66, Cl. 37—145.

Jones, Dwight C., to Earthcavator Co., Inc. Hydraulically controlled scarifier. 3,274,713, 9–27–66, Cl. 37—145.

Jones, John E.: *See*—
Quinn, James L., and Jones. 3,275,806.

Jones, John L. Transmission. 3,274,847, 9–27–66, Cl. 74—425.

Jonkers, Conelius O., and F. H. Fockens, to C. van der Lely, N.V. Hydraulic pump or motor. 3,274,947, 9–27–66, Cl. 103—162.

Jorey, Harold R.: *See*—
Lovell, Walter C., Jorey, and Lovell. 3,275,178.

Joseph, Earl C., to Sperry Rand Corp. Data processing system. 3,275,994, 9–27–66, Cl. 340—172.5.

Joseph, Morris: *See*—
Highley, Thomas T., Jr., Joseph, Ross, and Williams. 3,275,781.

Journal Box Servicing Corp.: *See*—
Potter, Thomas W. 3,274,823.

Jünger, Carl, to Bopp & Reuther G.m.b.H. Hydraulic apparatus. 3,274,894, 9–27–66, Cl. 91—87.

Jurasinski, Edward D.: *See*—
Alyea, Harold W., Jurasinski, and Fliss. 3,275,031.

Kahllo, Mary. Body supporting apparatus. 3,274,618, 9–27–66, Cl. 4—112.

Kaiser Aluminum & Chemical Corp.: *See*—
Hendrickson, Henry G. 3,274,818.
Hendrickson, Henry G. 3,275,184.

Kaiser, Francis T.: *See*—
Brown, John W., Jr., Buesing, and Kaiser. 3,275,244.

Kaiser, Willard D., J. C. Swain, and G. E. Manning, to Westinghouse Air Brake Co. Handle means for percussive tool. 3,275,089, 9–27–66, Cl. 173—162.

Kahn, Leonard R. Automatic frequency control means for single-sideband receivers and the like. 3,275,940, 9–27–66, Cl. 325—423.

Kal-Equip Co., Inc.: *See*—
Parmater, Lee W. 3,275,932.

Kampert, Keith W., and R. F. Zimmerman, to International Harvester Co. Load handling vehicle. 3,275,173, 9–27–66, Cl. 214—140.

Kanal, Laveen N.: *See*—
Dunn, William H., Fey, Kanal, McDermid, and Smith. 3,275,985.
Dunn, William H., Fey, Kanal, McDermid, and Smith. 3,275,986.

Kane, Aloysius J.: *See*—
Wooster, George S., and Kane. 3,275,710.

Kaneko, Tetsuichi, to Oyo Chishitsu Co. Ltd. Ultrasonic inclination meter. 3,275,983, 9–27–66, Cl. 340—18.

Karagos, Berch Y.: *See*—
Bailey, Bruce L., Karagos, and Peller. 3,275,488.

Karlstads Mekaniska Werkstad, Aktiebolaget: *See*—
Tell, Lars E. K. A. 3,275,155.

Karoly, John A., and C. C. Bryant, to Chicago Bridge & Iron Co. Entrance nozzle for flashing superheated liquid. 3,275,249, 9–27–66, Cl. 239—523.

Karraker, David G., and W. C. Perkins, to United States of America, Atomic Energy Commission. Recovery of actinides from halite debris. 3,275,421, 9–27–66, Cl. 23—319.

Kasahara, Tadashi, to Konishiroku Shashin Kogyo Kabushiki-Kaisha. Single-lens reflex camera. 3,274,912, 9–27–66, Cl. 95—44.

Kassler, Henry, and N. G. Cutler. Stabilised organic sulphur-containing phosphorous insecticides. 3,275,499, 9–27–66, Cl. 167—22.

Kasten, John E. Forage wagon clutch. 3,275,176, 9–27–66, Cl. 214—519.

Katavolos, James: *See*—
Pavey, Arthur R. B., Puchaarewicz, and Katavolos. 3,274,703.

Kay, Edward L.: *See*—
Knowles, Edwin C., Kay, and McCoy. 3,275,636.

Kaydon Engineering Corp., The: *See*—
Blais, Robert L. 3,275,391

Keen, Everett M., and A. J. Siciliano, to Keen Mfg. Corp. Egg-laying batteries. 3,274,972, 9–27–66, Cl. 119—48.

Keen Mfg. Corp.: *See*—
Keen, Everett M and Siciliano. 3,274,972.

Keever, James D.: *See*—
Thorneburg, James L., Thorneburg, and Keever. 3,274,804.

Kehoe, Edward C., and E. C. Walker, to Saline Water Conversion Corp. Falling film still having convex film feeding spillways. 3,275,529, 9–27–66, Cl. 202—172.

Keith, Carl D., and D. L. Bair, to Engelhard Industries, Inc. Method of preparing a sulfided platinum on carbon catalyst. 3,275,567, 9–27–66, Cl. 252—439.

Kelch, Heins, to Kienale Apparate G.m.b.H. Arrangement for transforming a rotary motion into a reciprocating motion. 3,274,838, 9–27–66, Cl. 74—54.

Kelco Co.: *See*—
Schweiger, Richard G. 3,275,581.

Kell, Ray D., to Radio Corp. of America. Method of adhering particles to a support surface. 3,275,466, 9–27–66, Cl. 117—33.5.

Keller, Chauncey A. R.: *See*—
Statler, Lowell E., and Keller. 3,275,048.

Keller, Hans-Otto, and G. Sommer, to Maschinenfabrik Moenus A.G. Needle drive mechanism for bag sewing machines. 3,274,963, 9–27–66, Cl. 112—213.

Kelley, Oliver K., K. W. Gage, and R. W. Craig, to General Motors Corp. Transmission. 3,274,854, 9–27–66, Cl. 74—677.

Kelly, Anthony H., to Westinghouse Electric Corp. Air conditioning apparatus. 3,275,069, 9–27–66, Cl. 165—64.

Kelsey-Hayes Co.: *See*—
Malthaner, Sylvester A. 3,275,378.

Keltec Industries Inc.: *See*—
Glass, Ronald, Andrel, and Harrison. 3,275,158.

Kempe, Robert A., and K. R. Szczepanisk, to Metalphoto Corp. Process for developing photosensitized anodized aluminum plates. 3,275,440, 9–27–66, Cl. 96—66.

Kendall Co., The: *See*—
Rosecrans, Dean A. 3,275,001.

Kendis, Bradley A., trustee: *See*—
Allin, Norman J. 3,275,083.

Kendt, Norman L., to General Electric Co. Misalignment compensating coupling. 3,275,344, 9–27–66, Cl. 285—9.

Kennedy, Everett P., to Ford Motor Co. Motor vehicle pedal support. 3,275,094, 9–27–66, Cl. 180—90.6.

Kennedy, Harold E., to H. H. Robertson Co. Process for fabricating protected metal sheets. 3,274,679, 9–27–66, Cl. 29—473.1.

Kennedy Van Saun Mfg. & Eng. Corp.: *See*—
Niemitz, Gerhard. 3,274,701.

Kerensky, Gleb, to The English Electric Co. Ltd. Regulation of hydraulic turbines. 3,275,008, 9–27–66, Cl. 137—25.

Kern, Curtis R., and H. L. Rice, to Milchem Inc. Well treating composition and method. 3,275,552, 9–27–66, Cl. 252—8.55.

Kern, Richard W., to International Business Machines Corp. Optical angular orientation measuring system. 3,274,883, 9–27–66, Cl. 88—14.

Kettler, Clarence J., to General Electric Co. Voltage regulator with magnetic amplifier elements. 3,275,928, 9–27–66, Cl. 323—43.5.

Kidd, Benjamin E. III: *See*—
Flynn, Gordon L., Kidd, and Peek. 3,275,738.

Kiefer, Bernhard: *See*—
Kuhne, Rudolf, Diery, and Kiefer. 3,275,672.

Kienzle Apparate G.m.b.H.: *See*—
Kelch, Heins. 3,274,838.

Kierstead, Richard W.: *See*—
Goldberg, Moses W., Jampolsky, and Kierstead. 3,275,691.

Kiessling, Rudolf H., and C. A. Schaefer, to Square D Co. Electric limit switch having a diagonally divided housing, a detachable actuator and mechanisms for causing selected operation of a push-button snap-switch. 3,275,764, 9–27–66, Cl. 200—47.

Kilbourn, Eugene L., to S. H. Leggitt Co. Method of making lever arms. 3,274,677, 9–27–66, Cl. 29—417.

Kilmer, Lauren G., and R. K. Shearman, to Sinclair Research, Inc. Explosion pressure responsive switch. 3,275,770, 9–27–66, Cl. 200—82.

Kilsheimer, John R., and H. H. Moorefield, to Union Carbide Corp. Aminonaphthyl and alkylaminonaphthyl N-methylcarbamates and insecticidal compositions thereof. 3,275,507, 9–27–66, Cl. 167—32.

Kindseth, Harold V.: *See*—
Roth, Donald J., Zeller, and Kindseth. 3,275,498.

King, Charles H.: *See*—
Bates, Mortimer C., and King. 3,275,363.

King, John H., to Bell Telephone Laboratories, Inc. Connector. 3,275,971, 9–27–66, Cl. 339—151.

King, Joseph W., to Cleveland Technical Center, Inc. Ultrasonic detecting means. 3,275,975, 9–27–66, Cl. 340—1.

King, William M.: *See*—
Hoffman, Paul S., and King. 3,275,914.

Kinney, S. P., Engineering, Inc.: *See*—
Carr, Hugh B. 3,275,151.

Kinsey, Denis V., L. J. Valette, and J. Lothe, to United Kingdom Atomic Energy Authority. High-temperature gas-cooled reactors with internal fission by-product trapping means. 3,275,522, 9–27–66, Cl. 176—37.

Kirby, Peter, J. Roberts, and J. H. Davies. Preparation of thiadiazoles. 3,275,646, 9–27–66, Cl. 260—304.

Kirby, Peter: *See*—
Hackmann, Johannes Th., and Kirby. 3,275,647.

Kirk & Blum Mfg. Co., The: *See*—
Carsey, Eugene A. 3,274,892.

Kirk, Charles R. Swivel hook for apertured board. 3,275,272, 9–27–66, Cl. 248—225.

Kirsten, James O. F. Metal shears. 3,274,872, 9–27–66, Cl. 83—162.

Kisling, Edward J. Power driven miter saw. 3,275,044, 9–27–66, Cl. 143—6.

Kitchin, Harry D., to The Marconi Co. Ltd. Transistorized saw-tooth wave generators utilizing direct current negative feedback. 3,275,847, 9–27–66, Cl. 307—88.5.

Klamath-Ward, Inc.: *See*—
Beeley, Howard K. 3,275,045.

Klein, Hans-Christof, to Alfred Teves Maschinen- und Armaturenfabrik Kommandit-Gesellschaft. Prime-mover system. 3,274,768, 9–27–66, Cl. 60—19.

Klein, Hans-Christof, to Alfred Teves Kommanditgesellschaft. Flow regulator for fluid systems. 3,274,779, 9–27–66, Cl. 60—53.

Klein, Max: *See*—
Nossal, Fred, and Klein. 3,275,203.

Kleinberg, Gustave. Ovens for treating compressed coal briquettes. 3,274,702, 9–27–66, Cl. 34—171.

Kleinewefers, Joh., Sohne Maschinenfabrik: *See*—
Munch, Erhardt. 3,274,923.

Klingel, John B., to Struthers Scientific and International Corp. Method of autoclaving concrete blocks. 3,276,724, 9–27–66, Cl. 264—82.

Klinzing, A. F., Co., Inc.: *See*—
Prentice, George D. 3,275,125.

Klockner-Humboldt-Deutz Aktiengesellschaft: *See*—
Abermeth, Hubert. 3,274,980.

Kloos, Nantko, to Shell Oil Co. Alkyd resins prepared from epoxy esters of monocarboxylic acids and process for the production of same. 3,275,583, 9–27–66, Cl. 260—22.

Klug, Helmut, K. Kuchinka, H. Peters, D. Schleede, and J. Winter, to Hercules Inc. Fire resistant polyolefins containing an arsenic, antimony, or bismuth compound and a halogenated diaromatic ester of a dicarboxylic acid. 3,275,596, 9–27–66, Cl. 260—45.75.

Klumpp, Ferdinand, Jr., to Heyman Mfg. Co. Grounding pin. 3,275,423, 9–27–66, Cl. 29—183.

Knak, James: *See*—
Segall, Louis H., Morrison, and Knak. 3,275,884.

Knapsack-Griesheim Aktiengesellschaft: *See*—
Sennewald, Kurt, Vogt, and Weiden. 3,275,581.

Knauss, Robert L., to Armour and Co. Hide-pulling apparatus. 3,274,639, 9–27–66, Cl. 17—21.

Knecht, George W., to Murray Mfg. Corp. Biased pivot assembly. 3,275,965, 9–27–66, Cl. 335—276.

Kneip, George D., Jr.: *See*—
Betterton, Jesse O., Jr., Kneip, Easton, and Scarbough. 3,275,480.

Knickerbocker, Harvey M., to Philco Corp. Apparatus for the calibration of radar equipment. 3,276,016, 9–27–66, Cl. 343—17.7.

Knoll, Marvin E., and W. H. Nicklas, to General Electric Co. Electron beam-defining device and method for producing the same. 3,275,748, 9–27–66, Cl. 178—7.87.

Knopf, Robert J.: *See*—
Brotherton, Thomas K., Lynn, and Knopf. 3,275,679.

Knowles, Edwin C., E. L. Kay, and F. C. McCoy, to Texaco Inc. Amine hexa fluotitanates. 3,275,636, 9-27-66, Cl. 260—270.

Knowles, Keith, to The British Iron and Steel Research Association. Forging presses. 3,274,819, 9-27-66, Cl. 72—421.

Knox, Arthur W., to Mitchel & King Ltd. Cutting appliances. 3,274,685, 9-27-66, Cl. 30—211.

Knox, Lawrence H., to Syntex Corp. 3,17-disubstituted-1,3,5(10)-estratriene derivatives. 3,275,623, 9-27-66, Cl. 260—239.55.

Knudsen, Knud J., to Lewis Engineering Co. Correlating time and event recorder. 3,275,808, 9-27-66, Cl. 235—92.

Knutson, Orville T.: *See*—
Quinn, James L., Knutson, and Dreyer. 3,275,232.

Kobayashi, Hiroto, and K. Aibara, to Kabushiki Kaisha Keihin Seiki Seisakusho. Valve assembly. 3,275,022, 9-27-66, Cl. 137—221.

Kobe Steel Works, Ltd.: *See*—
Igaue, Toshio, and Shimodera. 3,274,967.

Kobera, Zdenek: *See*—
Hauer, Josef, and Kobera. 3,274,671.

Koch, Fritz. Construction toy. 3,274,728, 9-27-66, Cl. 46—29.

Kocher, Erich J., and J. N. Long, to Vilter Mfg. Corp. Refrigeration system with lube oil separation means. 3,274,796, 9-27-66, Cl. 62—473.

Kock, Erhard: *See*—
Gauthier, William D., and Kock. 3,274,860.

Kody, Joseph D., and A. M. Rabin, to Imperial-Eastman Corp. Fitting. 3,275,350, 9-27-66, Cl. 285—341.

Koehring Co.: *See*—
Nelson, Wayne F., and Boyd. 3,275,080.

Kolbe, Hans: *See*—
Horndasch, Georg. 3,276,021.

Kollar, Ernest P., and L. G. Taft, to International Business Machines Corp. Film record cards and method for making same. 3,274,722, 9-27-66, Cl. 40—158.

Kollsman Instrument Corp.: *See*—
Angst, Walter. 3,274,830.

Kolze, Lawrence A., to The Dole Valve Co. Rotary shear valve with remote control. 3,275,237, 9-27-66, Cl. 236—51.

Komarmy, Julius M., to General Motors Corp. Test for engine oil contamination. 3,274,820, 9-27-66, Cl. 73—61.

Konefes, Joseph H., to International Harvester Co. Automatic leveling device. 3,275,174, 9-27-66, Cl. 214—140.

Kongpricha, Santad: *See*—
Schwarer, Richard F., Kongpricha, and Preusse. 3,275,413.

Hartzell, Harry F., Jr. 3,275,126.
Tucker, Linwood G. 3,275,360.

Korman, Nathaniel I., to Radio Corp. of America. Microwave phase shifter system providing substantial constant phase shift over broad band. 3,275,952, 9-27-66, Cl. 333—31.

Kornylak Corp.: *See*—
Lutes, Harry L., and Smith. 3,275,124.

Kosenkranius, Hans, to Polacoat Inc. Method of irreversibly darkening a bis(p-aminophenyl) vinyl carbonium polymethine leuco dye. 3,275,442, 9-27-66, Cl. 96—90.

Kosinsky, Edward J., to Phillips Petroleum Co. Material blending. 3,275,731, 9-27-66, Cl. 264—176.

Kossoy, Michael W.: *See*—
Poarch, Arthur E., and Kossoy. 3,275,459.

Kowalski, Ludwig R., to Cameron Iron Works, Inc. Ball valve. 3,275,025, 9-27-66, Cl. 137—330.

Kozel, James A., and G. L. McClure, to American Radiator & Standard Sanitary Corp. Adjustable liquid metering means for shut-off valves. 3,275,033, 9-27-66, Cl. 137—613.

Kozlowski, Lawrence S.; 25% each, to E. Sripstead, and V. DeRosier, and M. B. Legatz. Fuel tank cap lock. 3,274,809, 9-27-66, Cl. 70—163.

Kracht, Otto, and H. Schumacher, to Kadron G.m.b.H. Castings for valve assemblies. 3,275,024, 9-27-66, Cl. 137—315.

Kraft, William M., and R. Green, to Tenneco Chemical, Inc. Polyvinyl chloride plasticized with the addition products of alpha,beta-unsaturated dicarboxylic esters with epoxidized fatty esters. 3,275,584, 9-27-66, Cl. 260—23.

Kramer, David N.: *See*—
Cannon, Paul L., Jr., and Kramer. 3,275,534.

Krantz, Leon, to Monsanto Co. Belt structure having swivel means. 3,274,617, 9-27-66, Cl. 2—301.

Kray, Raymond J., and R. W. Stevenson, to Celanese Corp. of America. Moldable oxymethylene copolymers and method of preparing same. 3,275,804, 9-27-66, Cl. 260—67.

Krehbiel, John H., to Molex Products Co. Switch connector. 3,275,766, 9-27-66, Cl. 200—51.

Krempff, Robert, to Saint-Gobain de Compagnie. Conversion of SO_2 to SO_3 with a catalyst of selected porosity. 3,275,406, 9-27-66, Cl. 23—175.

Kren, Robert, to James Beresford & Son Ltd. Submersible electric motor for appliances. 3,275,662, 9-27-66, Cl. 310—87.

Kresge, Richard E.: *See*—
Optner, Philip S., and Kresge. 3,275,180.

Krieger, Arthur E., and K. E. Golding, to Libbey-Owens-Ford Glass Co. Inspection apparatus for transparent glass sheets. 3,274,882, 9-27-66, Cl. 88—14.

Krimm, Heinrich: *See*—
Schnell, Hermann, Bottenbruch, and Krimm. 3,275,601.

Kritzer, Richard W., to Peerless of America, Inc. Heat exchanger including a capillary tube section. 3,274,797, 9-27-66, Cl. 62—511.

Kritzer, Richard W., to Peerless of America, Inc. Heat exchangers. 3,275,071, 9-27-66, Cl. 165—121.

Krivisky, Rubin: *See*—
Hillson, Frank, and Krivisky. 3,275,396.

Krizan, Earl W. Smoking pipe. 3,275,006, 9-27-66, Cl. 131—183.

Kronauer, Richard E.: *See*—
Fowle, Arthur A., Heuchling, Latham, Schulte, and Kronauer. 3,274,795.

Kronig, Walter: *See*—
Holzrichter, Hermann, Kronig, and Frenz. 3,275,680.

Kroko, Leonard J.: *See*—
Chang, Hung C., and Kroko. 3,275,415.

Krulisch, Robert R., to Union Carbide Corp. Process for producing polyethylene in the presence of tertiary butyl hydroperoxide and N-butylamine. 3,275,615, 9-27-66, Cl. 260—94.9.

Krystof, Joseph P., to Rowland Products Inc. Apparatus for making extruded sheet material. 3,274,646, 9-27-66, Cl. 18—13.

Kubitzek, Alfred: *See*—
Biedermann, Klaus, Jakob, Kubitzek, and Simson. 3,275,913.

Kuchek, Henry A., to The Dow Chemical Co. Clad porous metal articles. 3,275,424, 9-27-66, Cl. 29—183.5.

Kuchinka, Karl: *See*—
Klug, Helmut, Kuchinka, Peters, Schleede, and Winter. 3,275,596.

Kudsi, Mohamed B.: *See*—
Campbell, Robert L., and Kudsi. 3,275,074.

Kuhlmann Etablissements: *See*—
Tchouriline-Kissileff, Georges. 3,275,420.

Kühne, Rudolf, H. Diery, and B. Kiefer, to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Bruning. Process for preparing sulfonic acid esters. 3,275,672, 9-27-66, Cl. 260—456.

Kujawa, Francis M., and M. Worsley, to Hooker Chemical Corp. Compositions containing adducts of hexahalocyclopentadiene. 3,275,806, 9-27-66, Cl. 260—75.

Kuman, Melvin L., to Ingersoll-Rand Co. Fastener holder for power tools. 3,275,047, 9-27-66, Cl. 144—32.

Kumm, Brent, to Koots-Wagner Electric Co., Inc. Multiple position solenoid device. 3,275,964, 9-27-66, Cl. 335—259.

Kunihiro, Toshihiro, and N. Shimasaki, to Nippon Electric Co. Ltd. Two-stage multiplex switching system employing interlaced connections between highways and external circuit groups. 3,275,749, 9-27-66, Cl. 179—15.

Kunlholm, Martin L., to The Heald Machine Co. Grinding machine. 3,274,738, 9-27-66, Cl. 51—165.

Kuns, Hans J., to Sperry Rand Corp. Microelectronic chopper circuit having symmetrical base current feed. 3,275,912, 9-27-66, Cl. 317—235.

Kuoppamaki, Eero O.: *See*—
Kuoppamaki, Lauri J. and E. O. 3,275,800.

Kuoppamaki, Lauri J. and E. O. Electric heater for use in a sauna bath. 3,275,800, 9-27-66, Cl. 219—367.

Kupferberg, Kenneth, to Forbro Design Corp. Electrolytic cell anode potential control system. 3,275,925, 9-27-66, Cl. 323—4.

Kupferberg, Kenneth, to Forbro Design Corp. Bridge controlled multiple regulated power supplies. 3,275,927, 9-27-66, Cl. 323—22.

Kurtz, Abraham N., to Union Carbide Corp. Process for the preparation of alkali metal salts of acetylenic acids. 3,275,686, 9-27-66, Cl. 260—533.

Kyle, James C., to Physical Sciences Corp. Detonation squib. 3,274,937, 9-27-66, Cl. 102—70.2.

LRC Electronics Inc.: *See*—
Blanchard, Clayton H., and McIntosh. 3,275,913.

Laboratory for Electronics, Inc.: *See*—
Simmons, Alan J. 3,276,026.

Laing, Robert L., and C. D. Feemster. Thermionic converters. 3,275,923, 9-27-66, Cl. 322—2.

L'air Liquide, Societe Anonyme Pour l'Etude et l'Exploitation des procedes Georges Claude: *See*—
Grenier, Maurice, and Petit. 3,274,787.

Laishley, Frederick H., to Joseph Lucas (Industries) Ltd. Apparatus for measuring the output voltage of an alternating current bridge by comparison with the output of a variable transformer. 3,275,934, 9-27-66, Cl. 324—99.

Lamoureaux, Raymond L. Painter's utility implement. 3,275,187, 9-27-66, Cl. 220—90.

Landau, Richard E. Dewatering clayey and silty soil. 3,274,782, 9-27-66, Cl. 61—11.

Lang, Edmund, to Elb-Schliff Edmund Lang. Machine stand and cooling means therefor. 3,275,495, 9-27-66, Cl. 165—47.

Lang, Ernest U., and E. E. Mallory, to National-Standard Co. Band clutch with cup-shaped outer member. 3,275,111, 9-27-66, Cl. 192—41.

Lang, Hilde: *See*—
Banriedel, Friedrich, Franke, and Lang. 3,275,444.

Lange, Kenneth W., to Chicago Bridge & Iron Co. Apparatus for preventing ice and frost formation under low-temperature tanks. 3,274,785, 9-27-66, Cl. 61—36.

Langguth, Robert P., to Monsanto Co. Corrosion-inhibited phosphate solutions. 3,275,566, 9-27-66, Cl. 252—389.

Lanham, Edward H. Signal conversion circuit for "E" and "M" telephone leads. 3,275,750, 9-27-66, Cl. 179—16.

Lanphere, Gerald B., to Lipe-Rollway Corp. Auxiliary facing stop control system. 3,274,866, 9-27-66, Cl. 82—34.

Lary, Edmund C.: *See*—
Meyerand, Russell G., Jr., and Lary. 3,275,859.

Lasky, Theodore A., to International Business Machine Corp. Latch-operated clutch with dual pawls. 3,275,110, 9-27-66, Cl. 192—28.

Latham, Allen, Jr.: *See*—
Fowle, Arthur A., Heuchling, Latham, Schulte, and Kronauer. 3,274,795.

Schmidt, Richard. 3,274,803.

Morey, Everett D., to General Electric Co. Basket for automatic washing machine. 3,274,808, 9–27–66, Cl. 68—23.

Morin, Robert B., and B. G. Jackson, to Eli Lilly and Co. Penicillin conversion via sulfoxide. 3,275,626, 9–27–66, Cl. 260—243.

Morioka, Shoji, to Mitsubishi Denki Kabushiki Kaiba. Compressed-gas circuit interrupter with pressurized arcing chambers and downstream blast valve. 3,275,778, 9–27–66, Cl. 200—148.

Morris, George H. Spring release locking attachment for cultivator shanks. 3,275,086, 9–27–66, Cl. 172—266.

Morris, Rexford M., to Therm-O-Disc, Inc. Thermoelectric valve. 3,275,285, 9–27–66, Cl. 251—11.

Morris, Virgil W.: *See*—
Woods, Louis S., and Morris. 3,274,973.

Morrison, James C.: *See*—
Segall, Louis H., Morrison, and Knak. 3,275,884.

Morrison, Stanley R., to Honeywell Inc. Photosensitive accelerometer utilizing radiation pressure. 3,275,835, 9–27–66, Cl. 250—231.

Morrison, Thomas E. Stud locating device. 3,274,692, 9–27–66, Cl. 33—169.

Morrissey, Thomas G., G. B. Davis, Jr., and H. H. Short, 40% to J. G. Milne, Jr., 40% to H. H. Short, and 20% to G. B. Davis, Jr. Acoustic structural unit. 3,275,101, 9–27–66, Cl. 181—33.

Morse, Milton. Spherical transparent two-gun cathode ray tube. 3,275,882, 9–27–66, Cl. 315—13.

Moses, Kurt, and E. Hartog, to The Bendix Corp. Self-testing means for computer control signal attenuating devices. 3,275,810, 9–27–66, Cl. 235—151.31.

Mosher, Donald K., to Mobil Oil Corp. Sample chamber system. 3,274,835, 9–27–66, Cl. 73—422.

Mosler Research Products, Inc.: *See*—
Hansen, Donald E. 3,276,006.
Quist, Eric G., and Geis. 3,276,005.

Motorola, Inc.: *See*—
Bailey, Dean C. 3,275,846.
Carsello, Richard D., and Gunn. 3,275,938.
Csanky, Geza. 3,275,845.

Motorola, Inc.: *See*—Continued
Onodera, George C. 3,275,911.
Parker, Warren H. 3,275,904.
Phillips, Alvin B. 3,275,910.

Mottus, Edward H., and J. E. Fields, to Monsanto Co. Process for polymerizing unsaturated monomers with a catalyst comprising an organoboron compound, a peroxygen compound and an amine. 3,275,611, 9–27–66, Cl. 260—80.5.

Moulder, Morgan M. Dispenser of treatment materials interposable between two garden hose portions. 3,275,194, 9–27–66, Cl. 222—48.

Mountjoy, Garrard, to Baldwin Electronics, Inc. Method and means for correcting output indications of an encoder. 3,276,010, 9–27–66, Cl. 340—347.

M-O Valve Co. Ltd., The: *See*—
Ferrari, Ronald L., and Reddish. 3,275,868.

Moyers, Ashton P.: *See*—
Moyers, Thomas E., H. C. and A. P. 3,275,046.

Moyers, Hugh C.: *See*—
Moyers, Thomas E., H. C. and A. P. 3,275,046.

Moyers, Thomas E., H. C., and A. P. Portable pulpwood cut-off and loading machine. 3,275,046, 9–27–66, Cl. 143—46.

Mueller Brass Co.: *See*—
Fuesslein, John R., Rader, and Roper. 3,274,747.

Mueller, Carl H.: *See*—
Brown, Arlie L., Cook, Hackney, Hulsey, Mueller, and Wegman. 3,275,327.

Mueller, Martin, to Seymour C. Graham. Lid arrangement apparatus. 3,275,121, 9–27–66, Cl. 198—33.

Müller, Adam, to Dr. A. Muller, Chemisches Laboratorium. Process for the preparation of highly concentrated dry hops by freezing.

Muller, Dr. A., Chemisches Laboratorium: *See*—
Müller, Adam. 3,275,447.

Müller Erich, and K. Hasspacher, to Boehringer Ingelheim G.m.b.H. Derivatives of 7-sulfamyl-3,4-dihydro-1,2,4-benzothiadiazine-1,1-dioxide and process for their preparation. 3,275,625, 9–27–66, Cl. 260—243.

Muller, Georges, to Roussel-UCLAF, S.A. Novel 18,20-β-dioxygenated-5β-pregnanes. 3,275,620, 9–27–66, Cl. 260—239.55.

Muller, Kurt: *See*—
Vielmo, Oskar, and Muller. 3,275,385.

Mullin, Doyle D., to General Mills, Inc. Inflatable support structure. 3,276,017, 9–27–66, Cl. 343—18.

Multifol Patentverwertungs-A.G.: *See*—
Utz, Kastulus. 3,275,725.

Munch, Erhardt, to Joh. Kleinevefers Sohne Maschinenfabrik. Machine for treating paper webs, especially satining or glazing calender. 3,274,923, 9–27–66, Cl. 100—70.

Murakami, Paul. Car door actuator device. 3,274,732, 9–27–66, Cl. 49—280.

Murata, Yoshi, to Hitachi Ltd. Single multi-electrode electron tube having a disc shaped ceramic stem with a recessed portion in one face thereof said recess portion having a metal layer thereon. 3,275,877, 9–27–66, Cl. 313—250.

Murray Mfg. Corp.: *See*—
Knecht, George D. 3,275,965.

Murawsky, Fritz: *See*—
Schubert, Manfred, and Murawsky. 3,274,409.

Murray, James F.: *See*—
Leone, Nick A. 3,274,774.

Murray, Betty J.: *See*—
Leone, Nick A. 3,274,774.

Myer, Jon H., to Hughes Aircraft Co. Support structure for laser rods. 3,275,273, 9–27–66, Cl. 248—264.

Myer, Oscar & Co., Inc.: *See*—
Vedvik, Andrew H. 3,275,165.

Myers, Howard A. Sponge mops. 3,274,635, 9–27–66, Cl. 15—244.

Nagel, Herbert, to Wolverine Flexographic Mfg. Co. Rotary printing press with means for reversing cylinder rotation. 3,274,930, 9–27–66, Cl. 101—180.

Nagel, Herbert, to Wolverine Flexographic Mfg. Co. Reversible one way clutch. 3,275,112, 9–27–66, Cl. 192—44.

Naito, Kenichi: *See*—
Hamamura, Yasuji, Hayashiya, and Naito. 3,275,446.

Nash, Alan R. B. Rotary dampers. 3,274,836, 9–27–66, Cl. 74—574.

Nash, Robert A., and J. F. Weidenheimer, to American Cyanamid Co. Stable calcium tetracycline compositions. 3,275,513, 9–27–66, Cl. 167—65.

National Distillers and Chemical Corp.: *See*—
Corbett, Herbert O. 3,275,039.
Hammond, John E. 3,275,616.

National Rejectors, Inc.: *See*—
Cahill, Bernard S. 3,275,138.

National-Standard Co.: *See*—
Lang, Ernest U., and Mallory. 3,275,111.

National Tank Co.: *See*—
Rosso, John B., and Seaver. 3,275,898.

Naylor, Straut W. Upright crop dryer. 3,274,699, 9–27–66, Cl. 34—56.

Neagle, Richard, to Edison. Assemblable and disassemblable partition. 3,274,741, 9–27–66, Cl. 52—242.

Nedschroef Octrooi Maatschapij, N. V.: *See*—
Van de Meerendonk, Gerardus C. 3,274,626.

Nee, Thomas F., to Avien, Inc. Apparatus for containing a non-rigid or fluid material. 3,275,418, 9–27–66, Cl. 23—281.

Neely, Charles W., to Neely Mfg. Co., Inc. Garment cover. 3,275,128, 9–27–66, Cl. 206—7.

Neely Mfg. Co., Inc.: *See*—
Neely, Charles W. 3,275,128.

Neff, Robert E., to Devices Inc. Clear barrel cartridge fuse. 3,275,772, 9–27–66, Cl. 200—129.

Neilson, William J., and J. F. Fischer, to Smith Industries International, Inc. Carburized drill bit bearing. 3,275,389, 9–27–66, Cl. 308—8.2.

Nelson, Wayne F., and G. R. Boyd, to Koehring Co. Valve release mechanism for a well device. 3,275,080, 9–27–66, Cl. 166—225.

Nennerfelt, Carl B., to North Electric Co. Party line adapter for four-conductor switching system. 3,275,751, 9–27–66, Cl. 179—17.

Neumann, Peter G., to Bell Telephone Laboratories Inc. Load sharing clock supplies. 3,275,992, 9–27–66, Cl. 340—172.5.

Newberry, Sterling P., to General Electric Co. Process and apparatus for producing particles by electron melting and ultrasonic agitation. 3,275,787, 9–27–66, Cl. 219—69.

Newman, Douglas A., to Columbia Ribbon and Carbon Mfg. Co., Inc. Planographic printing plate. 3,274,928, 9–27–66, Cl. 101—149.2.

Newman, Douglas A., to Columbia Ribbon and Carbon Mfg. Co., Inc. Planographic printing plate and processes. 3,274,929, 9–27–66, Cl. 101—149.2.

Nichols, Gordon E., to Winthrop-Atkins Co., Inc. Easel-type mount. 3,275,280, 9–27–66, Cl. 248—459.

Nicklas, William H.: *See*—
Knoll, Marvin E., and Nicklas. 3,275,748.

Niemitz, Gerhard, to Kennedy Van Saun Mfg. & Eng. Corp. Stationary circular contact cooler for calcined lime and other materials. 3,274,701, 9–27–66, Cl. 34—164.

Niese, Leo J., to Toledo Scale Corp. Checkweighing and assorting system having a tiltable conveyor belt. 3,275,135, 9–27–66, Cl. 209—74.

Nikles, Erwin: *See*—
Widmer, Gustav, Batzer, and Nikles. 3,275,661.

Nilles, John D., to Honeywell Inc. Vibration damping pneumatic control device. 3,275,238, 9–27–66, Cl. 236—87.

Nippon Electric Co, Ltd.: *See*—
Kunihiro, Toshihiro, and Shimasaki. 3,275,749.
Matsukura, Yasuo, and Oda. 3,275,906.

Noerdinger, Claude J. Inflatable air mattress. 3,274,624, 9–27–66, Cl. 5—345.

Noguchi, Masaaki, and S. Sakakibara, to To Yota Motors Co., Ltd. Two-cycle two-cylinder internal combustion engine. 3,274,982, 9–27–66, Cl. 123—56.

Nord-Aviation Societe Nationale de Constructions Aeronautiques: *See*—
Ravel, Maurice. 3,274,776.

Nordsieck, Arnold T., to General Motors Corp. Method of producing a spherical Gyro rotor. 3,274,666, 9–27–66, Cl. 29—148.4.

North American Coal Corp., The: *See*—
Clark, Ezekail L. 3,275,405.

North American Philips Co., Inc.: *See*—
Hughes, Ray C. 3,275,557.
Spaapen, Joseph B. M., and Verhoeven. 3,275,539.
Van Oostrom, Antonius G. J., and Venema. 3,275,865.

North Electric Co.: *See*—
Nennerfelt, Carl B. 3,275,751.

Norton, Elliott M.: *See*—
Fodor, Ferenz H. 3,275,863.

Nossal, Fred, and M. Klein, to Ferdinand Gutmann & Co. Low vapor permeability container closure including push-out tab for forming pour mouth and method for making same. 3,275,203, 9–27–66, Cl. 222—541.

Nutton, Leonard C.: *See*—
Sturges, Nigel, and Nutton. 3,275,204.

Nutten, Warren D., to The Tillotson Mfg. Co. Fuel feed and charge forming apparatus with priming device. 3,275,305, 9–27–66, Cl. 261—34.

Oberg Mfg. Co., Inc.: *See*—
Vecchi, John C. 3,274,878.

O'Brien, Edward J., and R. P. Williams, to Spraying Systems Co. Modified full cone nozzle. 3,275,248, 9–27–66, Cl. 239—487.

O'Connell, Robert A.: *See*—
Cornell, Dudley E., III, and O'Connell. 3,274,704.

Oda, Jyoji: *See*—
Matsukura, Yasuo, and Oda. 3,275,906.

Oesterle, Kurt M. Apparatus for the electrostatic precipitation of coating material. 3,275,239, 9–27–66, Cl. 239—15.

Ohl, David, to Standard Pressed Steel Co. Compression locking nut. 3,275,054, 9–27–66, Cl. 151—5.

Office National d'Etudes et de Recherches Arospatiales: *See*—
Berton, Pierre. 3,274,775.

Ohmega Laboratories: *See*—
Demarest, Philip C., Foster, and Crump. 3,275,879.

Ohsol, Ernest O.: *See*—
Lux, John H., and Ohsol. 3,275,179.

Ohsol, Ernest O., to Haveg Industries, Inc. Method of extruding foamed fibers having outer skins integral therewith. 3,275,720, 9–27–66, Cl. 264—48.

Okuda, Noriyuki: *See*—
Tsunoda, Kiyoshi, and Okuda. 3,275,508.

Okumura, Shinji: *See*—
Shiro, Teruo, Konishi, and Okumura. 3,275,526.

O'Leary, John M., Jr., to Container Corp. of America. Process for incorporating additives into polyolefins. 3,275,715, 9–27–66, Cl. 260—889.

Olin Mathieson Chemical Corp.: *See*—
Churchill, John W., and Jenney. 3,275,697.
Collins, Raymond L. 3,275,216.
Schwarer, Richard F., Kongpricha, and Preusse. 3,275,418.

Oliveira, Fabio de A. Method for injecting sand in moulding machines. 3,274,651, 9–27–66, Cl. 22—193.

Ollivier, Louis A., and J. B Skitt, Jr., to Fisher & Porter Co. Differential pressure transmitters. 3,274,833, 9–27–66, Cl. 73—407.

Olmsted, Harold H.: *See*—
Jimenez, James A., and Olmsted. 3,274,959.

Olson, Russell W.: *See*—
Gogarty, William B., and Olson. 3,275,075.

O'Mara, Joseph B., and R. G. D'Ascoli, to Anaconda Wire and Cable Co. Cable jointing template. 3,274,688, 9–27–66, Cl. 33—112.

Oney, John. Weed guard for treble hook. 3,274,726, 9–27–66, Cl. 43—43.4.

Onodera, George C., to Motorola, Inc. Semiconductor current limiter. 3,275,911, 9–27–66, Cl. 317—235.

Oppenheimer, Seymour, to Tee-Pak, Inc. Natural gut-colored fibrous meat casing. 3,275,456, 9–27–66, Cl. 99—176.

Optner, Philip S., and R. E. Kresge, to Lermer Packaging Corp. Mailing container construction. 3,275,180, 9–27–66, Cl. 220—17.

Ordower, Robert, to International Business Machines Corp. Oscillator driving a resonant circuit with a square wave and having negative feedback. 3,276,032, 9–27–66, Cl. 346—74.

Organon Inc.: *See*—
De Vries, Jan W. 3,275,515.
Siegmann, Cornelis M. 3,275,666.

Ort, George M., to A. B. Dick Co. Offset erasing fluid. 3,275,563, 9–27–66, Cl. 252—171.

Oskerka, Nick, Jr.: *See*—
Johanson, Bengt J., and Oskerka. 3,275,970.

Ostborg, John L.: *See*—
Morain, Willard A., Ostborg, and White. 3,274,781.

Ostwald, Fritz, to Alfred Teves Maschinen- und Armaturenfabrik KG. Fluid cushion. 3,275,314, 9–27–66, Cl. 267—64.

Oswald, Hendrikus J., and E. Turi, to Allied Chemical Corp. Cyanurate and isocyanurate stabilized halogen-containing olefin polymer compositions. 3,275,592, 9–27–66, Cl. 260—45.8.

Oswald, William C.: *See*—
Radke, Arthur O., Oswald, and Champa. 3,275,372.

O'Sullivan, Thomas F.: *See*—
Palchik, Edward H., O'Sullivan, and Tucker. 3,274,978.

Otken, Edwin J., to Good Humor Corp. Comestible. 3,274,958, 9–27–66, Cl. 107—54.

Otto, Hans-Werner: *See*—
Siebel, Hans P., and Otto. 3,275,712.

Ourednik, Frank: *See*—
Hirsch, Leon C., and Ourednik. 3,275,211.

Owens-Illinois, Inc.: *See*—
Lusher, Kenneth G., and Wells. 3,274,927.

Oyo Chishitsu Co. Ltd.: *See*—
Kaneko, Tetsuichi. 3,275,983.

Oxel, Berton R., to Dyfoam Corp. Apparatus for determining the expansive pressure of molded polystyrene beads. 3,274,643, 9–27–66, Cl. 18—4.

Pachmayr, Frank A. Detachable firearm recoil pads. 3,274,725, 9–27–66, Cl. 42—74.

Pack, Albert H.: *See*—
Leatham, Earl, Pack, and Weaver. 3,275,410.

Pacl, Robert A., Jr., to Sperry Rand Corp. Constant energy pulse generator. 3,275,841, 9–27–66, Cl. 307—88.

Padde Pty. Ltd.: *See*—
David, Harold G. 3,274,734.

Paige Co., The: *See*—
Paige, Richard E. 3,275,215.

Paige, Richard E., to The Paige Co. Container. 3,275,215, 9–27–66, Cl. 229—31.

Palchik, Edward H., T. F. O'Sullivan, and W. Tucker, to The Lummus Co. Vertical tube fluid heater. 3,274,978, 9–27–66, Cl. 122—356.

Paliyenko, Paul: *See*—
Macleod, Roderick B., and Paliyenko. 3,275,732.

Palmquist, Carl W.: *See*—
Waeldner, William J., and Palmquist. 3,274,916.

Pampus, Gottfried, N. Schön, and J. Witte, to Farbenfabriken Bayer Aktiengesellschaft. Process of producing cis-1,4 polybutadiene with a catalyst containing an organic iodine compound. 3,275,614, 9–27–66, Cl. 260—94.3.

Panochyk, Ralph G., to Automatic Canteen Co. of America. Information display panel. 3,274,718, 9–27–66, Cl. 40—124.

Papersch, Viktor, to G. D. Searle & Co. 7-hydroxy-2,4-dioxo-1,2,3,4,5,6-hexahydropyrido[2,3-d]-pyrimidines. 3,275,634. 9–27–66, Cl. 260—256.4.

Papesch, Viktor, to G. D. Searle & Co. 7-hydroxy-2,4-dioxo-1,2,3,4,5,6-hexahydropyrido [2,3-d]-pyrimidines. 3,275,634, 9–27–66, Cl. 260—256.4.

Paquette, Leo A., to The Upjohn Co. 2-aza-bicyclo[3.2.0]hept-6-ens-3-ones and process for their production. 3,275,653. 9–27–66, Cl. 260—326.5.

Parish, Clyde E., to Signal Oil and Gas Co. Dehydration of alcohols. 3,275,698, 9–27–66, Cl. 260—666.

Parker, John M.: *See*—
Wasson, Burton K., and Parker. 3,275,660.

Parker Mfg. Co.: *See*—
Johnson, Oscar H. 3,275,212.

Peras, Lucien, to Regie Nationale des Usines Renault. Cylinder heads for internal combustion engines. 3,274,981, 9-27-66, Cl. 123—30.

Perez, Guillermo, to Royal Typewriter Co., Inc. Tape reeling apparatus. 3,275,258. 9-27-66, Cl. 242—75.5.

Perkins, William C.: *See*—
Karraker, David G., and Perkins. 3,275,421.

Petelle, James F., to Bell & Howell Co. Locking mechanism. 3,275,395. 9-27-66, Cl. 312—320.

Peters, Henrich: *See*—
Klug, Helmut, Kuchida, Peters, Schleede, and Winter. 3,275,596.

Peterson, Donald K.: *See*—
Pye, David J., and Peterson. 3,275,561.

Peterson, William H., to Pullman Inc. Hydraulic draft gear arrangement. 3,275,164, 9-27-66, Cl. 213—43.

Petin, Jean, to J. J. Carnaud & Forges de Basse-Indre, Etablissements. Process of anodizing aluminum. 3,275,537, 9-27-66. Cl. 204—58.

Petit, Elwood P., to Combustion Engineering, Inc. Soot blower operation for vapor generator furnaces. 3,274,979, 9-27-66, Cl. 122—392.

Petit, Pierre: *See*—
Grenier, Maurice, and Petit. 3,274,787.

Petit, Robert M. E., to Societe Anonyme Francaise du Ferodo. Shoe for spot type disc brake. 3,275,105, 9-27-66, Cl. 188—250.

Petitt, William H., to The Harriman Mfg. Co. Adjustable disc harrow. 3,275,087, 9-27-66, Cl. 172—572.

Petropoulos, John C., and I. S. Megna, to American Cyanamid Co. Resinous composition and process for preparing the same 3,275,599, 9-27-66, Cl. 260—47.

Pfizer, Chas. & Co., Inc.: *See*—
Sardinas, Joseph L. 3,275,453.

Pflanz, Herbert M., and Z. A. Wachta, to Allis-Chalmers Mfg. Co. Multipoint contacts employing the arc rotating principle. 3,275,777. 9-27-66, Cl. 200—144.

Pfeifer, Gunther, to The Bendix Corp. Fluid pressure servomotor. 3,275,381, 9-27-66, Cl. 303—7.

Pharmaca Aktiebolaget: *See*—
Flodin, Per G. M., Johansson, and Carlsson. 3,275,576.
Zaar, Stig G. B., Wallenius, and Lausing. 3,275,416.

Philco Corp.: *See*—
Knickerbocker, Harvey M. 3,276,016.

Phillips, Alvin B., to Motorola, Inc. Planar transistor with a relative higher-resistivity base region. 3,275,910, 9-27-66, Cl. 317—235.

Phillips, Bernard C., to The Tillotson Mfg. Co. Fuel feed and charge forming apparatus. 3,275,308, 9-27-66, Cl. 261—35.

Phillips, James A., and A. E. Schofield, to United States of America, Atomic Energy Commission. High Q power capacitor. 3,275,916, 9-27-66, Cl. 317—260.

Phillips Petroleum Co.: *See*—
Bauer, Robert D. 3,275,707.
Box, E. O., Jr. 3,275,706.
Brundrett, Leon P. 3,275,304.
Collins, Russell L. 3,275,931.
Franks, Bobby G. 3,276,390.

Phillips Petroleum Co.: *See*—Continued
Goins, Robert R. 3,275,303.
Hutson, Tom, Jr. 3,275,702.
Kosinsky, Edward J. 3,275,731.
Sailors, Howard R. 3,275,565.
Stapp, Paul R. 3,275,706.
Tolin, Ernest D., and Fluegel. 3,275,809.

Phillips, Webb R., J. L. Gaddy, Jr., and R. E. Russell, Jr., to Central Transformer Corp. Gas cooled electrical equipment for distribution systems. 3,275,893, 9-27-66, Cl. 317—100.

Physical Sciences Corp.: *See*—
Kyle, James C. 3,274,937.

Phyfe, Lawson M.: *See*—
Vandivere, Edward J., and Phyfe. 3,275,802.

Paganis, James: *See*—
Weller, Ernest E., and Paganis. 3,275,587.

Piatti, Enrico: *See*—
Zwobada, Rene, Piatti, and Beal. 3,275,866.

Piazze, Thomas E., to Continental Can Co., Inc. Method of simultaneously punching a hole and piercing an edge portion in the lip of a plastic bag. 3,274,869, 9-27-66, Cl. 83—52.

Pickering, Alan H., F. C. Thompson, and A. J. Young, to English Electric Valve Co. Ltd. Microwave energy windows with conductive coating for dissipating static charges. 3,275,957, 9-27-66, Cl. 333—98.

Piehler, Wendell H. Collar construction for shirts. 3,274,615, 9-27-66, Cl. 2—141.

Pike, Herbert J., Jr.: *See*—
Schule, Elmer C., and Pike. 3,275,733.

Pile, Charles E., to Down Bros., and Mayer & Phelps Ltd. Clamping devices. 3,274,658, 9-27-66, Cl. 24—259.

Pilkington Bros. Ltd.: *See*—
Beattie, John R. 3,275,430.

Pillsbury Co., The: *See*—
Fritsberg, Edward L. 3,275,449.

Pinamonti, Franco, and S. Maccone, to Montecatini Societa Generale per l'Industria Mineraria e Chimica. Stabilized fungicidal compositions. 3,275,500, 9-27-66, Cl. 167—2.

Pincus, Meyer, to Combustion Engineering, Inc. Fastening of attachments such as boiler casing to expanded metal. 3,275,073, 9-27-66, Cl. 165—136.

Pite, John J.: *See*—
Venison, Douglas M., and Pite. 3,274,022.

Pitts, Warren R., to Honeywell Inc. Reel mount. 3,275,255, 9-27-66, Cl. 242—68.3.

Pittsburgh Plate Glass Co.: *See*—
Rabenold, Ronald R. 3,275,734.

Place, Thomas M., Sr., to Beckman Instrument, Inc. Method for making electrical resistance element. 3,274,669, 9-27-66, Cl. 29—155.7.

Plasko, Emil R., to American Radiator & Standard Sanitary Corp. Fluid control means. 3,275,014, 9-27-66, Cl. 137—81.5.

Plungulan, Mark, to Hercules Inc. Process for making fine particles of nitrocellulose. 3,275,250. 9-27-66, Cl. 241—21.

Plunk, Rowe A. Releasable retrieving tool. 3,275,368, 9-27-66, Cl. 294—86.3.

Pneumatic Scale Corp., Ltd.: *See*—
Dobbyn Geoffrey F. 3,275,043.

Poarch, Arthur E., and M. W. Kossoy, to Western Dairy Products, Inc. Method of making meat curing salt compositions. 3,275,459, 9-27-66, Cl. 99—222.

Podesva, Ctirad, and K. Vagi, to Rhone-Poulenc S.A. Process for the preparation of 1-(2-hydroxyethyl) imidazole derivatives. 3,275,649, 9-27-66, Cl. 260—309.

Poehler, Guenter, H. J. Waldmann, and H. Corr, to Badische Anilin-& Soda-Fabrik Aktiengesellschaft. Recovery of pure cyclohexanone and cyclohexanol. 3,275,692, 9-27-66. Cl. 260—586.

Pogorzelski, Frank S.: *See*—
Dubusker, William, Pogorzelski, and Fridrich. 3,275,794.

Pohlman, Henry K., to Federal-Mogul Corp. Method of making elastomeric seal. 3,275,729, 9-27-66, Cl. 264—162.

Polacoat Inc.: *See*—
Kosenkranius, Hans. 3,275,442.

Polaroid Corp.: *See*—
Green, Milton. 3,275,617.

Pollack, Solomon R., to Sperry Rand Corp. Thin film tetrode. 3,275,905, 9-27-66, Cl. 317—234.

Poller, Harry S., 60% to Atlas Corp. Self-locking clevis pin. 3,274,879, 9-27-66, Cl. 85—5.

Polycarbide Corp.: *See*—
Abos, Ralph L. 3,275,735.

Pomfrett, John M., to General Electric Co. High pressure discharge lamp with electrolysis preventing means. 3,275,885, 9-27-66. Cl. 315—330.

Pommerening, Uwe A., to General Dynamics Corp. Digital-to-analog converter. 3,276,011, 9-27-66. Cl. 340—347.

Pope, Bill L.: *See*—
Massey, William M., and Pope. 3,274,644.

Popper, Paul, to Power Jets (Research & Development) Ltd. Production of dense bodies of silicon carbide. 3,275,722, 9-27-66, Cl. 264—65.

Porsche, Dr. Ing. H.c.F. KG.: *See*—
Hoenick, Hans. 3,275,313.

Potter Instrument Co., Inc.: *See*—
Poumakis, Eleuthere. 3,275,208.

Potter, Thomas W., to Journal Box Servicing Corp. Compression test gage for journal box lubricating pads. 3,274,823, 9-27-66, Cl. 73—94.

Poulos, Andrew L.: *See*—
Foldessy, Justin E., and Poulos. 3,274,653.

Poumakis, Eleuthere, to Potter Instrument Co., Inc. Incremental tape drive system. 3,275,208, 9-27-66, Cl. 226—9.

Power Jets (Research & Development) Ltd.: *See*—
Popper, Paul. 3,275,722.

Prache, Marie P., to Lignes Telegraphiques & Telephoniques. Dielectric wave guide. 3,275,936, 9-27-66, Cl. 333—95.

Prache, Marie P., to Lignes Telegraphiques & Telephoniques. Dielectric-metal waveguide. 3,275,955, 9-27-66, Cl. 333—95.

Pratt, Henry, Co.: *See*—
Fawkes, Donald G. 3,275,289.

Prentice, George D., to A. F. Klinzing Co., Inc. Auger feeder. 3,275,125, 9-27-66, Cl. 198—205.

Prescott, Robert E.: *See*—
Caldwell, William N., Ericsson, Prescett, and Whidden. 3,275,279.

Prestodial Inc.: *See*—
Chernack, Milton. 3,274,875.

Preudhomme, Jean, to Compagnie de Saint-Gobain. Method of and apparatus for cutting glass. 3,275,207, 9-27-66, Cl. 225—2.

Preusse, William C.: *See*—
Schwarer, Richard F., Kongpricha, and Preusse. 3,275,413.

Preway, Inc.: *See*—
Jenson, Kenneth S., and Suhr. 3,274,989.

Price, Glenn R., and E. N. Walsh, to Stauffer Chemical Co. Pesticidal phosphorylated thiourea. 3,275,502, 9-27-66, Cl. 167—22.

Priewe, Hans, and K. Gutsche, to A. G. Schering. Certain 2-benzene sulfonamide-5-alkyl (or alkoxy) pyrimidine compounds. 3,275,635, 9-27-66, Cl. 260—256.5.

Prikryl, Jaroslav: *See*—
Budesinsky, Zdenek, Jelinek, and Prikryl. 3,275,633.

Pringle, Frank E., Jr.: *See*—
James, Robert C., Wilson, and Pringle. 3,274,746.

Prinz, Eberhard: *See*—
Maus, Otto, and Prinz. 3,275,597.

Prosser, David C., and J. A. Ronning, Jr., to Cutler-Hammer, Inc. Conveyor belt with code elements. 3,275,123, 9-27-66, Cl. 198—38.

Propper Mfg. Co., Inc.: *See*—
Speelman, Irving A. 3,275,099.

Prox, Frank Co., Inc.: *See*—
Prox, Robert F., Jr. 3,275,376.

Prox, Robert F., Jr., to Prox, Frank Co., Inc. Retainer for coal cutter bits. 3,275,376, 9-27-66, Cl. 299—92.

Puchnarewicz, Alexander: *See*—
Pavey, Arthur R. B., Puchnarewicz, and Katavolos. 3,274,703.

Pudelko, Hermann, to Durkoppwerke Aktiengesellschaft. Gimp-feed mechanism for buttonhole-stitching machines. 3,274,962, 9-27-66, Cl. 112—65.

Pulliam, Joseph H.: *See*—
Messina, Salvatore J., and Pulliam. 3,274,936.

Pullman Inc.: *See*—
Peterson, William H. 3,275,164.

Pulvaria, Charles F. Force sensor. 3,274,828, 9-27-66. Cl. 73—141.

Pumpelly, Charles T.: *See*—
Pedjac, Joseph J., and Pumpelly. 3,275,578.

Punttila, Olli J.: *See*—
Valtanen, Seppo O., Punttila, and Sjolund. 3,275,156.

Pye, David J., and D. K. Peterson, to The Dow Chemical Co. Lubricious soap composition. 3,275,561, 9-27-66, Cl. 252—110.

Pyrotemp Corp.: *See*—
Binkowski, Edward J. 3,275,479.

Quaas, Joseph F.: *See*—
Wasserman, Rene D., and Quaas. 3,275,560.

Quarzlampen Gesellschaft m.b.H.: *See*—
Sturm, Walter. 3,274,994.

Querfurth, Wilhelm, to Deutsche Gold- und Silber-Scheideanstalt vormals. Production of thermally stable polyoxymethylenes by boiling in water. 3,275,593, 9-27-66, Cl. 260—45.9.

Quinn, Bert A., to Ideal Brass Works Inc. Chain-type safety door lock. 3,275,364, 9-27-66, Cl. 292—264.

Quinn, James L., and J. E. Jones, to Cummins-Chicago Corp. Business record bearing coded indicia. 3,275,806. 9-27-66, Cl. 235—61.12.

Quinn, James L., O. T. Knutson, and W. H. Dreyer, to Cummins-Chicago Corp. Proof encoder and perforating system therfor. 3,275,232, 9-27-66, Cl. 234—1.

Quinton, Kenneth C., and D. H. Smart, to Communication Patents Ltd. Wired broadcasting systems and apparatus therefor. 3,275,742, 9-27-66, Cl. 178—5.2.

Quist, Eric G., and R. H. Geis, to Mosler Research Products, Inc. Capacity intruder alarm having capacitive A.C. coupling and D.C. bias coupling in parallel between a detector and amplifier. 3,276,005, 9-27-66, Cl. 340—258.

Raasch, Maynard S., to E. I. du Pont de Nemours and Co. Bis-(trifluoromethyl) thioketene, its dimer and its homopolymer. 3,275,609, 9-27-66, Cl. 260—79.7.

Rabenold, Ronald R., to Pittsburgh Plate Glass Co. Method of casting sheet-like articles. 3,275,734, 9-27-66, Cl. 264—316.

Rabin, Arthur M.: *See*—
Kody, Joseph D., and Rabin. 3,275,350.

Racki, Francis R.: *See*—
Stipanovic, Joseph G., and Racki. 3,275,104.

Rader, Robert R.: *See*—
Fueslein, John R., Rader, and Roper. 3,274,747.

Radio Corp. of America: *See*—
Burns, Joseph R. 3,275,996.
Kell, Ray D. 3,275,466.
Korman, Nathaniel I. 3,275,952.
Sabisky, Edward S., and Gerritsen. 3,275,558.

Radke, Arthur O., W. C. Oswald, and J. A. Champa, to Bostrom Corp. Seat structure. 3,275,372, 9-27-66, Cl. 297—285.

Rahman, Abdel, M. M. A.: *See*—
Tantawi, Mohamed H., Rahman, and Guindi. 3,275,472.

Ralphs Engineering Co. Ltd., The: *See*—
Ralph, George T. 3,274,628.

Ralphs, George T., to The Ralphs Engineering Co. Ltd. Manufacture of shoe components. 3,274,628, 9-27-66, Cl. 12—146.

Ralston, Harold A., to J. I. Case Co. Agricultural implement tool bar. 3,275,341, 9-27-66, Cl. 280—460.

Rasmussen, Frits, to F. L. Smidth & Co. Air separator with fluidized discharge. 3,275,140, 9-27-66, Cl. 209—139.

Raspante, Morris M. Temporary sealing means for conduit under pressure. 3,275,023. 9-27-66, Cl. 137—315.

Rathke, Harry C., and N. M. Briggs, to The Meyercord Co. Design outline transfer sheet. 3,275,465, 9-27-66, Cl. 117—3.1.

Rau Findings Co.: *See*—
Jacobson, Martin. 3,275,362.

Rauch, Lauren F. Folding foot rest. 3,275,283, 9-27-66, Cl. 248—205.

Ravel, Maurice, to Nord-Aviation Societe Nationale de Constructions Aeronautiques. Combustion chambers of reaction propulsion units. 3,274,776, 9-27-66, Cl. 60—39.74.

Raymond Corp., The: *See*—
Sheheen, Shay J. 3,275,926.

Raytheon Co.: *See*—
Feist, Wolfgang M. 3,275,869.

Read, John A. Sheave pulley. 3,275,301, 9-27-66, Cl. 254—194.

Lloyd, William A., and Zaphiropoulos. 3,275,789.

Vauquelin, Roger D., and M. Roubertie. Control system incorporating a series of electric circuits and providing the reading aloud of an information carrying record. 3,275,756, 9–27–66, Cl. 179—100.1.

Vdo Tachometer Werke Schindling, Adolf, G.m.b.H.: *See*—
Forster, Johann. 3,274,846.

Vecchi, John C., to Oberg Mfg. Co., Inc. Apparatus for mounting piercing punches. 3,274,878, 9–27–66, Cl. 83—698.

Vedvik, Andrew H., to Oscar Myer & Co., Inc. Transfer mechanism for small elongate articles. 3,275,165, 9–27–66, Cl. 214—1.

Venema, Albertus: *See*—
Van Oostrom, Antonius G. J., and Venema. 3,275,865.

Venison, Douglas M., and John J. Pite, to Matthew Hall & Co. Ltd. Household and other refuse storage and disposal apparatus. 3,274,622, 9–27–66, Cl. 4—287.

Vereinigt Ultramarinfabriken Aktiengesellschaft Vormals Leverkus, Zeltner & Consorten: *See*—
Tanke, Erich. 3,275,464.

Vereinigung Volkseigener Betriebe Glas Dresden: *See*—
Schuls, Ernst O. 3,275,282.

Verhoeven, Adrianus C. J.: *See*—
Spaapen, Joseph B. M., and Verhoeven. 3,275,539.

Vermont Research Corp.: *See*—
Stover, Richard A. 3,276,003.

Vibber, Alfred W. Twisting spindle balloon control. 3,274,763, 9–27–66, Cl. 57—106.

Vicino, Lawrence. Anti clog device for lubricating system. 3,275,148, 9–27–66, Cl. 210—168.

Victor Electric Wire & Cable Corp.: *See*—
Sheeran, Charles. 3,275,969.

Vielmo, Oskar, and K. Muller, to Robert Bosch, G.m.b.H. Brake systems for automotive vehicles. 3,275,385, 9–27–66, Cl. 303—30.

Vigneault, Richard E., K. C. Finster, and J. V. Laudry, to The Dow Chemical Co. Method of mulching. 3,274,731, 9–27–66, Cl. 47—9.

Vilter Mfg. Corp.: *See*—
Kocher, Erich J., and Long. 3,274,796.

Vischer, Alfred, Jr. Frozen food product and package. 3,275,457, 9–27–66, Cl. 99—192.

Voggel, Knut: *See*—
Maier, Karl H., and Voggel. 3,275,527.

Vogt, Andre. Method for welding at least one member to a support such as a time-piece dial and dials obtained through said method. 3,275,791, 9–27–66, Cl. 219—103.

Vogt, Wilhelm: *See*—
Sennewald, Kurt, Vogt, and Welden. 3,275,531.

Voigtlander A.G.: *See*—
Greger, Paul, and Rehn. 3,274,911.

Voitik, Robert M., to Continental Illinois National Bank and Trust Co. of Chicago as trustee. O-ring rotary seal construction. 3,275,334, 9–27–66, Cl. 277—41.

Wachta, Zygmunt A.: *See*—
Pflanz, Herbert M., and Wachta. 3,275,777.

Wacker, Hermann: *See*—
Schrottle, Wilhelm. 3,275,088.

Wacker, Peter: *See*—
Schrottle, Wilhelm. 3,275,088.

Waeldner, William J., and C. W. Palmquist, to Dynamics Corp. of America. Air diffusing device with adjustable air turning vane. 3,274,916, 9–27–66, Cl. 98—40.

Wagenaar, Adriaan H., to Shell Oil Co. Polyolefin substituted polyamines and lubricants containing them. 3,275,554, 9–27–66, Cl 252—50.

Wagner, Manfred, and H. K. K. Stander, to International Business Machines Corp. Method of producing a solid electrolytic capacitor. 3,275,852, 9–27–66, Cl. 307—88.5.

Wagner Sign Service, Inc.: *See*—
Schubert, Wilfried. 3,274,719.
Schubert, Wilfried. 3,274,720.

Wahlgren, John G., to Abex Corp. Apparatus for testing configurated sipes. 3,274,825, 9–27–66, Cl. 73—100.

Waight, Francis H., A. C. B. MacPhail, and D. Southern, to Shell Oil Co. Synthetic lubricant containing oxetane polymers. 3,275,555. 9–27–66, Cl. 252—54.6.

Wainer, Eugene, to Horizons Inc. Anti-fogging agents for an N-vinyl, organic halogen, dye former system. 3,275,443, 9–27–66, Cl. 96—90.

Waldmann, Hans J.: *See*—
Poehler, Guenter, Waldmann, and Corr. 3,275,692.

Waldron, Stoddard S., and G. A. Bleyle, Jr., to Arthur D. Little, Inc. Conduit system and counling means therefor, for conveying cryogenic fluids. 3,275,345, 9–27–66, Cl. 285—47

Walker, David G., and W. R. Edwards, to Esso Research and Engineering Co. Recovery process for a cyclohexadiene. 3,275,699. 9–27–66, Cl. 260—666.

Walker, Douglas P. Apparatus for dewatering pulpy material. 3,274,924, 9–27–66, Cl. 100—153.

Walker, Elwood C.: *See*—
Kehoe, Edward C., and Walker. 3,275,529.

Walker Mfg. Co.: *See*—
Andrews, Peter G. 3,274,678.
Gregg, Paul V. 3,275,346.

Walker, Norman C., and C. E. Engle, to Dana Laboratories, Inc. Direct coupled differential amplifier with common mode rejection. 3,275,945, 9–27–66, Cl. 330—30.

Wall Colmonoy Corp.: *See*—
Peaslee, Robert L., and Tennenhouse. 3,275,240.

Wallace, John J.: *See*—
James, William A., and Wallace. 3,275,159.

Wallenius, Bo, G.: *See*—
Zaar, Stig G. B., Wallenius, and Lansing. 3,275,416.

Price, Glenn R., and Walsh. 3,275,502.

Walsh, James J.: *See*—
Coda, Nello, and Walsh. 3,275,953.
Coda, Nello, and Walsh. 3,275,954.

Walters, Harold A., to The Dow Chemical Co. Removal of dissolved substances from aqueous dispersions. 3,275,548, 9–27–66, Cl. 210—24.

Wang, Chi-Hua: *See*—
Emerson, William S., MacNair, and Wang. 3,275,681.

Wanttaja, Glenn E.: *See*—
Haupt, Robert H., and Wanttaja. 3,275,538.

Wapler, Jean J., to Societe Anonyme des Etablissementa Neu. Combination gas turbine and dust separator. 3,274,757, 9–27–66, Cl. 55—238.

Warczak, Russell C., to Intercompany Corp. Anti-offset powder distributor. 3,275,196, 9–27–66, Cl. 222—193.

Ward, Richard I.: *See*—
Meyer, Gerald R. 3,275,296.

Ward, Trevor, to Hotwork Ltd. Tunnel burners. 3,275,057, 9–27–66, Cl. 158—11.

Warner, John W., Jr. Extendable attachment for luggage. 3,275,336, 9–27–66, Cl. 280—43.24.

Wasielewski, Erwin V.: *See*—
Biedermann, Friedrich, Fauth, Jakob, Simson, and Wasielewski. 3,274,914.

Wasserman, Rene D., and J. F. Quaas, to Eutectic Welding Alloys Corp. Metal cleaning paste. 3,275,560, 9–27–66, Cl. 252—101.

Wasson, Burton K., and J. M. Parker. Substituted 2,7-dioxaspiro(4.4)nonanes. 3,275,660, 9–27–66, Cl. 260—347.7.

Wattenbach, Hans L., to General Electric Co. Spark tube having activated thermionic electrodes. 3,275,875, 9–27–66, Cl. 313—185.

Watters, Robert L., to General Electric Co. Emission current regulator for ion gauge. 3,275,883, 9–27–66, Cl. 315—106.

Way, Stewart, to Westinghouse Electric Corp. Electrode structures for an M.H.D. generator. 3,275,860, 9–27–66, Cl. 310—11.

Weatherhead Co., The: *See*—
Wellman, Ellis M. 3,275,029.

Weaver, Ernest P.: *See*—
Leathan, Earl, Pack, and Weaver. 3,275,410.

Weaver, Jack M.: *See*—
Erhart, Robert C., and Weaver. 3,275,275.

Weaver, Paul J., to Armand Anderson. Pressure switch having head portions held by groove means. 3,275,769. 9–27–66, Cl. 200—82.

Wedmore, William R.: *See*—
Esperseth, Maurice H., Sikorski, Spelines, and Wedmore. 3,275,752.

Wegman, Evert S., to Westinghouse Electric Corp. Room air conditioner. 3,274,919, 9–27–66, Cl. 98—94.

Wegmann, Jerome B.: *See*—
Brown, Arlie L., Cook, Hackney, Hulsey, Mueller, and Wegmann. 3,275,327.

Weibel, John, Jr., and T. C. Shuler, Jr., to General Motors Corp. Refrigerating apparatus. 3,275,288, 9–27–66, Cl. 251—127.

Wiechard, Robert N., and J. B. Anderson, to Combustion Engineering, Inc. System for heating air and drying fuel. 3,274,961. 9–27–66, Cl. 110—56.

Welden, Hans: *See*—
Sennewald, Kurt, Vogt, and Welden. 3,275,531.

Weldenheimer, Joseph F.: *See*—
Nash, Robert A., and Weldenheimer. 3,275,513.

Weigel, Terrence O. Compact vertical bale elevator. 3,275,117, 9–27–66, Cl. 198—7.

Weighart, Frederick G., to Automation Industries, Inc. Ultrasonic testing apparatus having improved resolution. 3,274,821. 9–27–66, Cl. 73—67.8.

Weil, Albert G., and W. A. and K. W. Zeuschner, to Remcor Products Co. Icemaker with piston-type ice remover. 3,274,792, 9–27–66, Cl. 62—138.

Weiland, Carl. Apparatus for increasing method and the effectiveness of air cushion vehicles. 3,275,090, 9–27–66, Cl. 180—7.

Weise, George H.: *See*—
Howard, Augustus A., and Weise. 3,275,012.

Weisglass, Louis L., to X-Ray Mfg. Corp. of America. Impulse timer for X-Ray tube systems operable for a preselected number of half-waves of alternating current cycle. 3,275,830, 9–27–66, Cl. 250—95.

Weiss, Eduard, and E. Fischer, to Farbwerke Hoechst Aktiengesellschaft Vormals Meister Lucius & Bruning. Apparatus and method for the semicontinuous or continuous polymerization of solid trioxane. 3,275,602, 9–27–66, Cl. 260—67.

Weiss, Gerhart, and K. W. Cornely, to American Thermocatalytic Corp. Method of molding a combustion element of ceramic fibers on a porous support. 3,275,497, 9–27–66, Cl. 162—103.

Weiss, Morris: *See*—
Moffitt, Guy R., Jr., and Weiss. 3,275,833.

Weissenberger, Gustav, to Monsanto Co. Triorganotin oximes and their preparation. 3,275,659, 9–27–66, Cl. 260—347.7.

Welch, Walter L. Method and apparatus for making phonographic re-recordings. 3,275,326, 9–27–66, Cl. 274—3.

Weller, Ernest E., and J. Plaganis, to Tile Council of America, Inc. Adhesive composition comprising an epoxy resin, an amine carbamate and water. 3,275,587. 9–27–66, Cl. 260—29.2.

Wellman, Ellis M., to The Weatherhead Co. Dash control unit. 3,275,029, 9–27–66, Cl. 137—560.

Wells, Lowell J.: *See*—
Lusher, Kenneth G., and Wells. 3,274,927.

Weltronic Co.: *See*—
Mann, Charles G. 3,275,987.

Welty, Dale E., to Holophane Co., Inc. Refractor. 3,275,825, 9–27–66, Cl. 240—106.

Wright, John F. Fork structures for pivotal attachment to vehicle mounted booms. 3,274,710, 9–27–66, Cl. 37—2.

Wright, Maurice J., to Joseph Lucas (Industries) Ltd. Power control circuits. 3,275,855, 9–27–66, Cl. 307—139.

Wurstner, Robert G., and R. W. Jahnke, to The Lubrizol Corp. Asphaltic products. 3,275,586, 9–27–66, Cl. 260—28.5.

Xerox Corp.: *See*—
Codichini, Joseph J., Eichler, and Hayne. 3,275,837.
Lavander, Edward J. 3,275,318.
Mayer, Edward F. 3,275,436.

X-Ray Mfg. Corp. of America: *See*—
Weisglass, Louis L. 3,275,830.

Yakim, Charles. Rotary sequence switch with radial cammed pivotal contact structure. 3,275,761, 9–27–66, Cl. 200—11.

Yakimik, Harry, Jr., to Tenneco Chemical, Inc. Polymerization of formaldehyde. 3,275,803, 9–27–66, Cl. 260—67.

Yanagizawa, Hiroshi, to Shikoku Kasei Kogyo Co. Ltd. Process for the production of cyanuric acid. 3,275,631, 9–27–66, Cl. 260—248.

Yano, Hiroshi. Toy gun with downwardly inclined striker spring. 3,274,986, 9–27–66, Cl. 124—27.

Yawata Iron & Steel Co., Ltd.: *See*—
Sawada, Yasuhiro. 3,275,431.

Yetter, Edward W., to E. I. du Pont de Nemours and Co. Programmed batch sequence controller. 3,275,988, 9–27–66, Cl. 340—172.5.

Yiotis, Peter G., to Sperry Rand Corp. Display apparatus. 3,275,871, 9–27–66, Cl. 313—108.

Yiotis, Peter G., to Sperry Rand Corp. Dual period aircraft control system. 3,275,269, 9–27–66, Cl. 244—77.

Yost, Oscar A. Oscillating port valve. 3,274,901, 9–27–66, Cl. 91—392.

Young, Arthur J.: *See*—
Pickering, Alan H., Thompson, and Young. 3,275,957.

Youngstown Research and Development, The: *See*—
Taylor, Louis H. 3,275,918.

Yount, Donald E.: *See*—
Goolsby, Robert E., and Yount. 3,274,957.

Y Sichel, Ramon H. E. Spring device. 3,275,311, 9–27–66, Cl. 267—1.

Zaar, Stig G. B., B. G. Wallenius, and E. Lausing, to Aktiebolaget Pharmica. Process and device for separating barbituric acid derivatives from biological samples, and for analyzing same. 3,275,416, 9–27–66, Cl. 23—230.

Zac-Lac Paint & Lacquer Corp.: *See*—
Beverly, Robert E., Jr. 3,274,690.

Zander, Werner. Mosaic plug-in toy. 3,274,727, 9–27–66, Cl. 46—16.

Zaphiropoulos, Renn: *See*—
Lloyd, William A., and Zaphiropoulos. 3,275,789.

Zavody V. I. Lenina Plzen: *See*—
Hauer, Josef, and Kobera. 3,274,671.

Zeile, Karl: *See*—
Sehring, Richard, and Zeile. 3,275,718.

Zeiss, Carl: *See*—
Sauer, Hans. 3,274,881.

Zell, Howard C.: *See*—
Engelhardt, Edward L., and Zell. 3,275,640.

Zeller, Jean E.: *See*—
Roth, Donald J., Zeller, and Kindseth. 3,275,498.

Zenith Radio Corp.: *See*—
Adler, Robert. 3,275,880.
Adler, Robert. 3,275,943.

Zennig, Karl H. J.: *See*—
Felder, Hans C., Schilling, Zennig, and Boehnke. 3,275,234.

Zentrale Forschungsstelle Fur Die Kali-Industrie Beim VEB Kaliwerk "Gluckauf" Sondershausen: *See*—
Schubert, Manfred, and Murawsky. 3,275,409.

Zernow, Louis: *See*—
Lieberman, Irving, and Zernow. 3,274,771.

Zettergren, Birger, to Atlas Copco Aktiebolag. Drill centralizers. 3,275,388, 9–27–66, Cl. 308—3.9.

Zeuschner, Kenneth W.: *See*—
Weil, Albert G., and W. A. and K. W. Zeuschner. 3,274,792.

Zeuschner, Walter A.: *See*—
Weil, Albert G., and W. A. and K. W. Zeuschner. 3,274,792.

Ziegenfelder, Robert C., to Chrysler Corp. Vehicle body interior ventilation arrangement. 3,274,915, 9–27–66, Cl. 98—2.

Ziegler, Peter, and J. C. Grivas, to Canada Packers Ltd. Process for the preparation of $\Delta^9(11)$-steroid compounds. 3,275,665, 9–27–66, Cl. 260—397.5.

Ziemer, Hans U.: *See*—
Adams, Albert, Tschappler, and Ziemer. 3,275,141.

Zieren, Dr. A., Chemiebau, G.m.b.H.: *See*—
Furkert, Herbert, and Scherts. 3,275,407.

Zimmerman, Richard F.: *See*—
Kampert, Keith W., and Zimmerman. 3,275,173.

Zinsco Electrical Products: *See*—
Locher, Ross E. 3,275,959.

Zippel, Georg A. Suspension filing system for folders and other document containers. 3,275,004, 9–27–66, Cl. 129—16.7.

Zorska, Roman: *See*—
Emrick, Donald D., Sating, and Zorska. 3,275,613.

Zugel, Victor A., to Harris-Intertype Corp. Signature handling mechanism. 3,275,315, 9–27–66, Cl. 270—54.

Zurker, Walter. Clamping device for skis. 3,275,160, 9–27–66, Cl. 211—60.

Zundel, Robert P.: *See*—
Konrad, Eugene W., and Zundel. 3,274,848.

Zwobada, Rene, E. Platti, and J. Beal, to Societe Lignes Telegraphiques et Telephoniques. Magnetron cathode structures. 3,275,866, 9–27–66, Cl. 313—37.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 27, 1966

NOTE.—First number, class; second number, subclass; third number, patent number

2– 3	3,274,612	29–214	3,274,674	57–106	3,274,763	74–552	3,274,851	99– 94	3,275,451	126–110	3,274,989
9	3,274,613	267	3,274,675	142	3,274,764	568	3,274,852	109	3,275,452		3,274,990

Classification of Plants

P. – 24 : 2.673
P. – 57 : 2.672

GEOGRAPHICAL INDEX OF RESIDENCE OF INVENTORS

(U.S. States, Territories and Armed Forces, the Commonwealth of Puerto Rico, and the Canal Zone)

Alabama	1	Louisiana	17	Pennsylvania	37
Alaska	53	Maine	18	Puerto Rico	51
Arizona	2	Maryland	19	Rhode Island	38
Arkansas	3	Massachusetts	20	South Carolina	39
California	4	Michigan	21	South Dakota	40
Canal Zone	57	Minnesota	22	Tennessee	41
Colorado	5	Mississippi	23	Texas	42
Connecticut	6	Missouri	24	U.S. Army	55
Delaware	7	Montana	25	U.S. Air Force	54
District of Columbia	8	Nebraska	26	U.S. Navy	56
Florida	9	Nevada	27	U.S. Samoa	59
Georgia	10	New Hampshire	28	Utah	43
Guam	58	New Jersey	29	Vermont	44
Hawaii	50	New Mexico	30	Virgin Islands	52
Idaho	11	New York	31	Virginia	45
Illinois	12	North Carolina	32	Washington	46
Indiana	13	North Dakota	33	West Virginia	47
Iowa	14	Ohio	34	Wisconsin	48
Kansas	15	Oklahoma	35	Wyoming	49
Kentucky	16	Oregon	36		

(First number in listing denotes location according to above key. Refer to patent number in body of the Official Gazette to obtain details as to inventor name, location, etc.)

Applications filed during the month of July—2,057

Registrations Issued ---------- 320—No. 815,660 to No. 815,979
Renewals Issued ---------- 70

The TRADEMARK SECTION of the OFFICIAL GAZETTE, issued weekly, is mailed under the direction of the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402 to whom all subscriptions should be made payable and all communications addressed; subscription price, $12.00 per annum, foreign mailing $4.00 additional; single copies, 25 cents each.

PRINTED COPIES OF TRADEMARK REGISTRATIONS are furnished by the Patent Office for 20 cents each. Address orders to the Commissioner of Patents, Washington, D.C., 20231.

MARKS PUBLISHED FOR OPPOSITION

SECTION 1

The following marks are published in compliance with section 12(a) of the Trademark Act of 1946. Application for the registration of these marks in more than one class has been filed as provided in section 30 of said act as amended by Public Law 772, 87th Congress, approved Oct. 9, 1962, 76 Stat. 769. Opposition under section 13 may be filed within thirty days of this publication. See Rules 2.101 to 2.105.

A separate fee of twenty-five dollars for each class opposed must accompany the opposition.

[NOTE: For publication of marks presented in applications for registration in one class, see section 2.]

SN 213,826. Texas Farm Products Company, Nacogdoches, Tex. Filed Mar. 11, 1965.

LONE STAR

Owner of Reg. Nos. 278,243, 691,007, and others.

Class 1—Raw or Partly Prepared Materials

For Field Seeds for Planting Purposes.
First use 1945.

Class 10—Fertilizers

For Fertilizer.
First use 1930.

Class 18—Medicines and Pharmaceutical Preparations

For Range and Mineral Blocks; Vitamin and Mineral Enriched Feed and Supplements, Both Medicated and Non-Medicated; and Vitamins for Animals.
First use 1930.

Class 46—Foods and Ingredients of Foods

For Feeds for Domestic Animals, Poultry, Game Birds, Dogs, and Fish, and Bulk Ingredients Therefor—Namely, Processed Cereal Grains, Bone Meal, Beet Pulp, Salt, Grit, Lime, and the Like; Corn Meal; Edible Peanut Oil, and Cooking and Salad Oils.
First use 1930.

SN 226,496. Atlantic Products Corporation, Trenton, N.J. Filed Aug. 26, 1965.

Owner of Reg. Nos. 504,356 and 544,379.

Class 3—Baggage, Animal Equipments, Portfolios, and Pocketbooks

For Baggage.

Class 22—Games, Toys, and Sporting Goods

For Golf Bags.
First use December 1945.

SN 228,861. Abbey Rents, Los Angeles, Calif. Filed Sept. 29, 1965.

ABBEY RENTS

The word "Rents" is disclaimed apart from the mark as shown. Owner of Reg. No. 440,758.

Class 2—Receptacles

For Vacuum Jugs, Serving Trays, and Wash Tubs for Icing Beverages.
First use Jan. 1, 1945, on serving trays.

Class 4—Abrasives and Polishing Materials

For Sandpaper.
First use Aug. 1, 1961.

Class 6—Chemicals and Chemical Compositions

For Wallpaper Remover.
First use Aug. 1, 1961.

Class 13—Hardware and Plumbing and Steam Fitting Supplies

For Cooking and Ice Cube Kettles, Non-Electric Coffee Pots and Staples.
First use Jan. 1, 1960, on cooking and ice cube kettles.

Class 15—Oils and Greases

For Lantern and Stove Liquid Fuels and Candles.
First use Jan. 1, 1950, on candles.

Class 19—Vehicles

For Baby Carriages, Baby Strollers, Car Top Luggage Carriers, Wheel Barrows, Appliance Dollies, and Window-Type Car Coolers.
First use Jan. 1, 1950, on baby carriages.

Class 21—Electrical Apparatus, Machines, and Supplies

For Three Way Ground Adapters, Electric Drills, Extension Cords, Electric Hedge and Shrub Trimmers, Electric Car Polishers and Bonnets and Sanders Therefor, Floor Polishers, Belt Sanders and Replacement Belts Therefor, Rug Shampoo Machines and Appliances Therefor, Electric Saws and Sabre Saws and Hole Saws and Blades Therefor, Electric Vacuum Cleaners and Attachments, Electric Fans, Electric Pointers for Use in Lectures, Automatic Microphone Stands, Amplifiers, Intercom Equipment, Wireless Microphones, AM-FM Radios, Speakers, Horn and Stand, Lavalier Microphones, TV Sets, Walkie-Talkies, Closed Circuit TV Cameras, Readmission Lights, Megaphone-Loud Hailers, Electric Coffee Pots, Incandescent and Fluorescent Lamps, Spot and Path Lights, Dimmerswitches, Low Voltage Generators, and Hot Lines for Caterers.
First use Jan. 1, 1945, on low voltage generators.

Class 22—Games, Toys, and Sporting Goods

For Umbrella Tents, Bicycle Exercisers, Sleeping Bags, Air Mattresses and Pumps Therefor.
First use Jan. 1, 1955, on bicycle exercisers.

Class 23—Cutlery, Machinery, and Tools, and Parts Thereof

For Spike Disc Lawn Aerators, Earth Augers, Drill Bits, Stapling Guns, Sledge Hammers, Chain Operated Hoists, Fertilizer Spreaders, Mandrels for Use With Drill and Hole Saws, Mason Trowels, Post Hole Diggers, Plumber Snakes, Meat Carving Sets, Base Metal Tableware, Chain Saws and Chain Grinders and Parts Therefor.
First use Jan. 1, 1934, on base metal tableware.

Class 26—Measuring and Scientific Appliances

For Baby Scales, Projectors, Sound Film Strip Projectors, Slide Projectors, Projection Screens, Electric Prompter and Viewers.
First use Jan. 1, 1945, on baby scales.

Class 28—Jewelry and Precious-Metal Ware

For Silver Plated Metal Ware—Namely, Cake Server Sets, Candlestick Holders and Candelabras, Chafing Dishes, Champagne Buckets, Compotes, Sugar Bowls and Creamers, Lazy Susans, Water Pitchers, Coffee and Tea Pourers, Seafood Servers, Coffee Urns, and Serving Trays.
First use Jan. 1, 1945, on silver plated cake server sets.

Class 30—Crockery, Earthenware, and Porcelain

For China Dishware.
First use Jan. 1, 1934.

Class 31—Filters and Refrigerators

For Ice Chests.
First use July 1, 1961.

Class 32—Furniture and Upholstery

For Baby High Chairs and Playpens and Cribs, Cots, Mattresses, Tray Stands, Champagne Carts, Camp Chairs, Dining Chairs, Card Tables, Beverage Bars, Bar Stools, Aisle Standards and Ropes Therefor, Costumers for Hanging Garments, Garment Racks, Champagne Stands, Folding Screens, Settees, Poker Tables, Dining Tables, Banquet Tables, Child's Banquet Tables, Garden Dining Tables, Snack Tables, Display Tables, Cocktail Tables, Bridge Tables, Smoking Stands, Luau Table Legs, Cushions, Spotlight Stands, Window Walls for Temporary Garden Enclosures, Pillows, and Lecterns.
First use Jan. 1, 1935, on cots.

Class 33—Glassware

For Glassware—Namely, Ashtrays, Beer Mugs, Punch Bowls and Ladles, Salad Bowls, Cocktail Bowls, Champagne Glasses, Creamers, Sugar Bowls, Punch Cups, Goblets, Liqueur Glasses.
First use Jan. 1, 1938, on glass salad bowls.

Class 34—Heating, Lighting, and Ventilating Apparatus

For Butane Space Heaters, Luau Torches, Barbecue Braziers, Candle Lamps, Lantern and Stove Mantles, Gasoline Lanterns, Camp Stoves.
First use Jan. 1, 1947, on barbecue braziers.

Class 36—Musical Instruments and Supplies

For Tape Cartridges, Automatic Turntables, Stereo Tape Recorders, Portable Phonographs, Automatic Repeating Tape Recorders.
First use Apr. 27, 1964.

Class 41—Canes, Parasols, and Umbrellas

For Garden Umbrellas.
First use Jan. 1, 1945.

Class 42—Knitted, Netted, and Textile Fabrics, and Substitutes Therefor

For Table Linens—Namely, Tablecloths, Garden Cloths, Napkins, Tea Towels, and Blankets.
First use Jan. 1, 1951.

Class 44—Dental, Medical, and Surgical Appliances

For Back Rests for Therapeutic Uses, Balkan Frames, Bradford Frames, Bradford Turners, Adjustable Hospital Beds, Fracture Beds, Vasoscillator Beds, Breast Pumps, Therapeutic Constrictors, Baby Incubators, Hyperextension Frames, Inhalators, Cold Quartz Lamps, Ultraviolet Lamps, Dehumidifier Lamps, Infra-Red Lamps, Mercury-Quartz Lamps, Sun Lamps, Stupe Kettles, Medical and Surgical Instrument Tables and Massage Tables, Buck Extension Apparatus, Hospital Bed Trapezes, Invalid Walkers, Massagers, Commodes, Crutches, Canes, Walk Aids, Suction Machines, Patient Lifters, Safety Sides for Beds, Overbed Tables, Wheel Chairs, Oxygen Face Masks, Oxygen Regulators, Oxygen Catheters, Croup Tents, Refrigerated Tents, Intermittent Positive Pressure Breathing Apparatus, Alternating Pressure Pads, Oxygen Purifiers, Hospital Heat Cradles, Hospital Linen Cradles, Intravenous Stand, Whirlpool Bath Apparatus, Hospital Bedboards, Thermo-Chemical Heat Pads, Stomach Pumps, Diathermy Apparatus, Fracture Frames, Sitz Baths, Irrigating Stands, Hospital Bed Screens, Stretchers, Traction Apparatus, Therapeutic Trapezes; Traction Accessories—Namely, Spreaders, Foot Plates, Knee Slings, Pelvic Slings, Weights With Hanger.
First use Jan. 1, 1935, on stretchers.

Class 50—Merchandise Not Otherwise Classified

For Extension Ladders, Luau Mats, Canvas Canopies, Canvas Runners.
First use Jan. 1, 1950, on canvas canopies.

Class 52—Detergents and Soaps

For Rug Shampoo.
First use Aug. 1, 1961.

SN 229,027. Earl M. Reiback, New York, N.Y. Filed Sept. 30, 1965.

LUMINAGE

Class 21—Electrical Apparatus, Machines, and Supplies

For Lamps Including an Illuminated Translucent Panel.

Class 50—Merchandise Not Otherwise Classified

For Works of Art and Advertising Displays Including Pictorial Representations and Collages Comprising an Illuminated Translucent Panel.

First use on or about July 15, 1965.

SN 237,917. C. P. Baker & Company, Philadelphia, Pa. Filed Feb. 3, 1966.

QUEEN'S LACE

Class 51—Cosmetics and Toilet Preparations

For Creme Rinse, Hand and Body Lotion, and Bubble Bath.

Class 52—Detergents and Soaps

For Hair Shampoo.

First use Nov. 18, 1965.

SN 247,549. Monico, Inc., New York, N.Y. Filed June 8, 1966.

Class 51—Cosmetics and Toilet Preparations

For Talcum Powder, Dusting Powder, Bath Powder, Bath Crystals, Bath Capsules, Cologne, After Bath Friction, Bath Oil, Dry Skin Bath Oil.
First use in or about July 1954.

Class 52—Detergents and Soaps

For Toilet Soap.
First use in or about May 1957.

SECTION 2

The following marks are published in compliance with section 12(a) of the Trademark Act of 1946. Opposition under section 13 may be filed within thirty days of publication. See Rules 2.101 to 2.105.
A fee of twenty-five dollars must accompany the opposition.
[NOTE: For publication of marks presented in a combined application for registration in more than one class, see section 1.]

Class 1—Raw or Partly Prepared Materials

SN 211,876. Compagnie Generale d'Electricite, Paris, France. Filed Feb. 12, 1965.

CEGEITE

Owner of French Reg. No. 439,829, dated Mar. 10, 1954 (Seine); Natl. Inst. No. 30,954.
For Thermo-Setting Molding Compound of Synthetic Plastic.

SN 230,110. Dow Corning Corporation, Midland, Mich. Filed Oct. 11, 1965.

DOW CORNING

Owner of Reg. Nos. 570,268, 667,003, and others.
For Compositions in Physical Character Comparable to Milled and Compounded Rubber Prior to Vulcanization but Containing Organosilicon Polymers and in Forms Fabricated of Such Compositions in the Forms of Tubes, Rods, Sheets, and the Like.
First use Jan. 5, 1965.

SN 231,024. Beaunit Corporation, New York, N.Y. Filed Oct. 22, 1965.

XENA

Owner of Reg. No. 782,927.
For Rayon Staple Fiber.
First use on or about July 29, 1965.

SN 231,377. Beaunit Corporation, New York, N.Y. Filed Oct. 23, 1965.

XENA, THE COMPATIBLE FIBER

No exclusive claim is made to "The Compatible Fiber" apart from the mark as shown. Owner of Reg. No. 782,927.
For Rayon Staple Fiber.
First use on or about July 15, 1965.

SN 234,080. Select Sires, Inc., Columbus, Ohio. Filed Dec. 6, 1965.

SELECT SIRES

Applicant disclaims the words "Select Sires" apart from the mark as shown.
For Livestock Animal Semen for Artificial Insemination.
First use Oct. 5, 1965.

SN 238,430. Haveg Industries, Inc., Wilmington, Del. Filed Feb. 9, 1966.

SHRINKFLEX

For Plastic Tubing for General Use in the Industrial Arts.
First use Dec. 28, 1965.

SN 239,480. Winzen Research Inc., Minneapolis, Minn. Filed Feb. 23, 1966.

STRATOFILM

Owner of Reg. No. 802,487.
For Plastic Film.
First use June 19, 1964.

SN 240,200. Reeves Brothers, Inc., New York, N.Y. Filed Mar. 4, 1966.

CURONEX

Owner of Reg. Nos. 639,185, 795,318, and others.
For Polyurethane Foams.
First use Dec. 1, 1965.

SN 240,859. Olen R. Creager, d.b.a. Vending Enterprises, Fresno, Calif. Filed Mar. 14, 1966.

PERRY PENGUIN'S

For Ice Pellets.
First use Jan. 12, 1966.

Class 3—Baggage, Animal Equipments, Portfolios, and Pocketbooks

SN 225,244. Jack C. Abert, d.b.a. Mechanical Products Company, Phoenix, Ariz. Filed Aug. 9, 1965.

CRUISER

For Backpacking Frames.
First use December 1959.

SN 225,245. Jack C. Abert, d.b.a. Mechanical Products Company. Filed Aug. 9, 1965.

PONDEROSA

For Pack Bags.
First use Jan. 20, 1964.

SN 225,246. Jack C. Abert, d.b.a. Mechanical Products Company, Phoenix, Ariz. Filed Aug. 9, 1965.

SKYLINE

For Pack Bags.
First use July 9, 1964.

SN 229,878. St. Thomas, Incorporated, Gloversville, N.Y. Filed Oct. 11, 1965.

COINPAK

Owner of Reg. No. 426,504.
For Leather Coin Holders.
First use Sept. 1, 1945.

SN 238,135. Zale Corporation, Dallas, Tex. Filed Feb. 4, 1966.

BAYLOR

Owner of Reg. Nos. 419,683, 751,683, and others.
For Empty Make-Up Cases Made of Fabric, Leather, and Canvas, Wallets, Billfolds, Key Cases, Pass Cases, Change Purses, and Portfolios.
First use Jan. 1, 1945.

Class 4—Abrasives and Polishing Materials

SN 225,218. Weben Industries, Inc., Dallas, Tex. Filed Aug. 6, 1965.

VEND-A-WAX

For Automobile Wax To Form a Protective Coating.
First use July 20, 1965.

Class 6—Chemicals and Chemical Compositions

SN 162,160. Hooker Chemical Corporation, Niagara Falls, N.Y. Filed Feb. 6, 1963.

TRITAC

For Agricultural Chemicals—Namely, Herbicides.
First use Mar. 12, 1961.

SN 163,050. Hooker Chemical Corporation, Niagara Falls, N.Y. Filed Feb. 19, 1963.

GLYTAC

For Agricultural Chemicals—Namely, Herbicides.
First use Feb. 3, 1961.

SN 202,468. Geigy Chemical Corporation, Ardsley, N.Y. Filed Sept. 23, 1964.

ROACH-TOX

Owner of Reg. Nos. 164,491, 218,039, and others.
For Insecticide.
First use on or about May 27, 1932.

SN 202,469. Geigy Chemical Corporation, Ardsley, N.Y. Filed Sept. 23, 1964.

FLY-TOX

Owner of Reg. No. 164,491.
For Combination Insecticide-Deodorant.
First use on or about Mar. 19, 1948.

SN 202,470. Geigy Chemical Corporation, Ardsley, N.Y. Filed Sept. 23, 1964.

FLEA-TOX

Owner of Reg. Nos. 261,556, 218,039, and others.
For Insecticide.
First use on or about Mar. 15, 1936.

SN 211,411. Allied Chemical Corporation, New York, N.Y. Filed Feb. 5, 1965.

BOMYL

For Insecticide.
First use June 23, 1964.

SN 224,768. The Lubrizol Corporation, Cleveland, Ohio. Filed Aug. 2, 1965.

IRCOGEL

For Metallo-Organic Thixotropic Agents for Use in Formulating Vinyl Organosols and Plastisols, and Other Dispersions and Solutions.
First use June 18, 1965.

SN 225,078. Stauffer Chemical Company, New York, N.Y. Filed Aug. 5, 1965.

EXPORSAN

For Selective Herbicide.
First use June 17, 1965.

SN 228,660. DeMert & Dougherty, Inc., Chicago, Ill. Filed Sept. 27, 1965.

DAISY FRESH

For Aerosol Spray Starch.
First use on or about Sept. 15, 1965.

SN 229,482. American-Lincoln Corporation, Toledo, Ohio. Filed Oct. 7, 1965.

AMERDIS

For Preparation for Disinfecting, Sanitizing, and Deodorizing, Primarily for Industrial Use.
First use Aug. 19, 1965.

SN 232,013. National Lead Company, New York, N.Y. Filed Nov. 2, 1965.

SF-100

For Additive for Incorporation With Oil To Form Oil Mud Casing Packs and Spotting Fluids for Freeing Drill Pipe as Used in Well Drilling.
First use Sept. 11, 1964.

SN 232,934. Rhodia Inc., New York, N.Y. Filed Nov. 18, 1965.

BRAZINYL

For Pure Chemical Principally of the Class of Alcohols, Aldehydes, Esters, Ketones, and Odorants, Used in the Odorization and Reodorization of Rubber, Plastics, Textile, and Paper.
First use Oct. 22, 1965.

SN 232,942. Stauffer Chemical Company, New York, N.Y. Filed Nov. 18, 1965.

PHOSFLEX

For Triphenyl Phosphate.
First use Oct. 26, 1965.

SN 234,426. Philip A. Hunt Chemical Corporation, Palisades Park, N.J. Filed Dec. 13, 1965.

Amāzol

For Etching Additive.
First use Feb. 10, 1965.

SN 234,774. Schwarz Services International Limited, Mount Vernon, N.Y. Filed Dec. 16, 1965.

CLEARFIL

For Mineral Compositions—Namely, Processing Adsorbents.
First use at least as early as Nov. 21, 1963.

SN 235,031. Crowley Hydrocarbon Chemicals, Inc., New York, N.Y. Filed Dec. 16, 1965.

DIPANOL

For Resinous Compound Composed of Terpene and Hydrocarbons, Which Is Prepared From Selected Pine Tree Products.
First use July 9, 1953.

SN 236,273. Korfund Dynamics Corporation, Westbury, N.Y. Filed Jan. 12, 1966.

VIBRODAMPER

For Chemical Damping Preparation Which Reduces Vibration and Noise and Renders Metal Acoustically Equivalent to Cork, the Application of Which Reduces Vibration in Noise.
First use Jan. 29, 1960.

SN 236,938. Tropical Gas Company, Inc., Coral Gables, Fla. Filed Jan. 20, 1966.

MYGAS

Applicant disclaims the term "Gas" apart from the mark as shown, reserving unto itself all common law rights therein.
For Liquefied Petroleum Gas.
First use Oct. 29, 1965.

SN 241,190. Societa Italo Americana Prodotti Antiparassitari, Rome, Italy. Filed Mar. 16, 1966.

SIAPRIT

Owner of Italian Reg. No. 165,017, dated May 14, 1964.
For Pesticide.

SN 241,293. Westchester Veterinary Products, Inc., White Plains, N.Y. Filed Mar. 17, 1966.

SCRATCHEX

Owner of Reg. No. 674,455.
For Insecticides for Domestic Animals.
First use Apr. 30, 1953.

SN 241,583. R. E. Davis Chemical Corporation, Chicago, Ill. Filed Mar. 22, 1966.

REX-121

For Chemical Catalyst for Sulfuric Acid Alkylation.
First use at least as early as November 1962.

Class 7 — Cordage

SN 239,768. The Goodyear Tire & Rubber Company, Akron, Ohio. Filed Feb. 28, 1966.

PERMALON

For Synthetic Yarns and Cords for Use in Making Pneumatic Tires.
First use Dec. 17, 1965.

SN 241,398. The Wear-Flex Corporation, Milwaukee, Wis. Filed Mar. 18, 1966.

The words "Nylon Slings" are disclaimed apart from the mark as shown. Owner of Reg. No. 750,750.
For Load Lifting Slings.
First use Mar. 7, 1966.

Class 9 — Explosives, Firearms, Equipments, and Projectiles

SN 223,871. Commercial Solvents Corporation, New York, N.Y. Filed July 21, 1965.

ANOGEL

For Explosives.
First use June 10, 1964.

SN 223,872. Commercial Solvents Corporation, New York, N.Y. Filed July 21, 1965.

OLGEL

For Explosives.
First use July 11, 1962.

SN 224,219. Loral Corporation, Scarsdale, N.Y. Filed July 26, 1965.

For Fabricated Beryllium Metal Parts Used in Missile and Satellite Components.
First use Dec. 1, 1964.

SN 228,073. RCBS Inc., Oroville, Calif. Filed Sept. 17, 1965.

RCBS

Owner of Reg. No. 418,323.
For Reloading Presses, Powder Measure, Powder Scale, Reloading Dies, Bullet Puller, Case Forming Dies, Case Gauge Trim Dies, Stuck Case Remover, Automatic Primer Feed, Primer Arms, Powder Trickler, Powder Spoon, Burring Tool, Case Lube Kit, Resizing Lubricant, Case Lube Pad, Case Neck Brush, and Shell Holders.
First use June 1, 1943.

SN 230,141. The Dow Chemical Company, Midland, Mich. Filed Oct. 14, 1965.

DOW

Owner of Reg. Nos. 140,588, 623,077, and others.
For Explosives.
First use Sept. 25, 1962; prior to 1895 as to "Dow."

SN 230,564. R & S Marketing Service, Inc., Bozeman, Mont. Filed Oct. 19, 1965.

WARHEAD

For Fireworks, Including Firecrackers.
First use on or about Jan. 2, 1962.

SN 230,565. R & S Marketing Service, Inc., Bozeman, Mont. Filed Oct. 19, 1965.

STINGER

For Fireworks, Including Firecrackers.
First use on or about Jan. 2, 1961.

SN 230,566. R & S Marketing Service, Inc., Bozeman, Mont. Filed Oct. 19, 1965.

Grizzly

For Fireworks, Including Firecrackers.
First use on or about Apr. 1, 1959.

Class 10 — Fertilizers

SN 209,152. Duval Corporation, Houston, Tex. Filed Dec. 31, 1964.

K-MAG

For Fertilizers Which Include Sulfate of Potash Magnesia.
First use Oct. 31, 1964.

SN 227,065. Samuel J. Porter, Arlington, Va. Filed Sept. 2, 1965.

D-FGAN

For Ammonium Nitrate Fertilizer.
First use May 20, 1965.

SN 227,066. Samuel J. Porter, Arlington, Va. Filed Sept. 2, 1965.

DANF

For Ammonium Nitrate Fertilizer.
First use June 7, 1965.

Class 11 — Inks and Inking Materials

SN 230,787. Columbia Ribbon & Carbon Manufacturing Co., Inc., Glen Cove, N.Y. Filed Oct. 21, 1965.

Type Bar

Owner of Reg. No. 431,434.
For Typewriter Ribbons and Carbon Paper.
First use Aug. 5, 1925.

SN 230,788. Columbia Ribbon & Carbon Manufacturing Co., Inc., Glen Cove, N.Y. Filed Oct. 21, 1965.

Secretarial

Owner of Reg. No. 294,139.
For Carbon Paper and Typewriter Ribbons.
First use Nov. 5, 1931.

Class 12 — Construction Materials

SN 227,305. Marine Railings Company, Incorporated, St. Petersburg, Fla. Filed Sept. 7, 1965.

DIAMODIZED

For Anti-Corrosive, Electrolytical Etching and Chemical Finish Applied to and Sold as a Part of Aluminum Tubing, Seamless Marine Railings and Fittings.
First use October 1962.

SN 235,211. Montezuma Plywood Company, San Francisco, Calif. Filed Dec. 23, 1965.

The mark consists of the letter "M" together with a stylized representation of half the full face view of a head of an Aztec deity or ruler.
For Plywood.
First use Oct. 21, 1965.

SN 238,240. E. J. Lavino and Company, Philadelphia, Pa. Filed Feb. 7, 1966.

LAVREZ

For Refractory Shapes.
First use Jan. 20, 1966.

SN 238,241. E. J. Lavino and Company, Philadelphia, Pa. Filed Feb. 7, 1966.

BONDREZ

For Refractory Shapes.
First use Jan. 20, 1966.

SN 238,242. E. J. Lavino and Company, Philadelphia, Pa. Filed Feb. 7, 1966.

BONSTAR

For Refractory Shapes.
First use Jan. 20, 1966.

SN 238,243. E. J. Lavino and Company, Philadelphia, Pa. Filed Feb. 7, 1966.

PRESTAR

For Refractory Shapes.
First use Jan. 20, 1966.

SN 245,801. Edward Hines Lumber Co., Chicago, Ill. Filed May 17, 1966.

The mark consists of a symbolic representation of the letters "H" and "P."
For Built-In Vanities, Window Units, Built-In Kitchen Cabinets, Lumber, Built-In Millwork, and Plywood.
First use Apr. 1, 1963.

SN 247,462. Conodeck, Inc., Easton, Pa. Filed June 7, 1966.

CONODEC

For Concrete Panels Reinforced With Metal Truss for Floor or Roof of Buildings.
First use April 1966.

Class 13 — Hardware and Plumbing and Steam-Fitting Supplies

SN 224,495. Aeroquip Corporation, Jackson, Mich. Filed July 29, 1965.

CONOSEAL

Owner of Reg. No. 695,159.
For Tube Joints, Pipe Joints, and Fittings.
First use on or about May 2, 1958.

SN 227,945. Industrial Bolt & Nut Company, Newark, N.J. Filed Sept. 16, 1965.

The word "Fasteners" is disclaimed.
For Pre-Packaged Fasteners—Namely, Bolts, Nuts, and Screws.
First use Jan. 10, 1962.

SN 238,229. International Telephone and Telegraph Corporation, New York, N.Y. Filed Feb. 7, 1966.

MIDGITROL

For Valves and Accessories Therefor.
First use Nov. 2, 1960.

SN 238,332. Crane Co., New York, N.Y. Filed Feb. 8, 1966.

HYDRO GEM

Owner of Reg. Nos. 256,365 and 754,881.
For Rotary Valves.
First use June 24, 1965.

SN 238,446. Preferred Utilities Manufacturing Corp., Danbury, Conn. Filed Feb. 9, 1966.

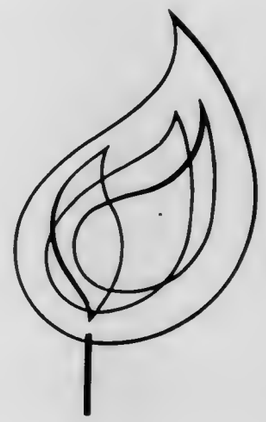
BAL-FLO

For Hydraulic Mixing Valves.
First use Nov. 22, 1965.

SN 239,581. Bailey Meter Company, Wickliffe, Ohio. Filed Feb. 25, 1966.

BELFAB

For Metallic Bellows.
First use Feb. 17, 1966.



Class 15 — Oils and Greases

SN 222,772. Smith Oil Corporation, Rockford, Ill. Filed July 6, 1965.

No registration rights are claimed in the word "Oil" apart from the mark as shown.
For Petroleum Products—Namely, Home Heating Oil, Gasoline, Motor Oil, and Industrial Solvents.
First use at least as early as November 1963.

SN 229,317. Victrylite Candle Company, Oshkosh, Wis. Filed Oct. 4, 1965.

For Candles.
First use Sept. 14, 1965.

Class 17 — Tobacco Products

SN 234,253. Poul Petersen Tobaksfabriker, d.b.a. Pete Bros., Horsens, Jutland, Denmark. Filed Dec. 8, 1965.

GRAND NATIONAL

Owner of Danish Reg. No. 559, dated June 3, 1933.
For Smoking Tobacco and Pipe Tobacco.

SN 234,256. Turmac Tobacco Company N.V., Amsterdam, Netherlands. Filed Dec. 8, 1965.

ORLY

Owner of Dutch Reg. No. 126,744, dated Nov. 28, 1956.
For Cigars, Cigarettes, and Smoking Tobacco.

Class 18 — Medicines and Pharmaceutical Preparations

SN 216,767. Wolins Pharmacal Corp., Farmingdale, N.Y. Filed Apr. 16, 1965.

WOLINS

For Medicines and Pharmaceutical Preparations.
First use 1925.

SN 216,768. Wolins Pharmacal Corp., Farmingdale, N.Y. Filed Apr. 16, 1965.

For Medicines and Pharmaceutical Preparations.
First use September 1964.

SN 216,769. Wolins Pharmacal Corp., Farmingdale, N.Y. Filed Apr. 16, 1965.

For Medicines and Pharmaceutical Preparations.
First use September 1964; 1925 as to the word "Wolins."

SN 224,491. Winston Pharmaceuticals, Incorporated, Winston-Salem, N.C. Filed July 28, 1965.

Diacels

For General Line of Timed Release Capsules Containing Medication Especially Prepared To Provide Sustained Action of the Drugs Contained Therein.
First use June 16, 1965.

SN 224,710. Pharm-A-Suitable Co., Grand Rapids, Mich. Filed Aug. 2, 1965.

Pharm-A-Suitable

For Medicinal Preparation for the Relief of Stomach Distress.
First use June 21, 1965.

SN 225,999. Sandoz, Inc., Hanover, N.J. Filed Aug. 18, 1965.

NEO-CAL

Owner of Reg. No. 337,832.
For Medicinal Preparation for Calcium Therapy.
First use July 29, 1965.

SN 226,292. Sandoz, Inc., Hanover, N.J. Filed Aug. 23, 1965.

SANDOPTAL

Owner of Reg. No. 284,623.
For Isobutylallylbarbituric Acid Used as an Ingredient in a Pharmaceutical Preparation.
First use at least by July 1, 1951.

SN 226,545. Merck & Co., Inc., Rahway, N.J. Filed Aug. 26, 1965.

DECAZOLE

For Medicinal Preparation for Ophthalmic Use.
First use Aug. 10, 1965.

SN 227,248. Chemische Fabrik Promonta Gesellschaft mit beschrankter Haftung, Hamburg, Germany. Filed Sept. 7, 1965.

PROMONTA

Owner of German Reg. No. 246,047, dated Oct. 11, 1919.
For Nutritional Supplement Containing Vitamins and Minerals.

SN 229,971. Fleet Wholesale Supply Co., Inc., Appleton, Wis. Filed Oct. 12, 1965.

SPROUT

For Livestock Feed Supplement and/or Milk Replacer.
First use Sept. 8, 1965.

SN 230,023. American Promotions, Inc., Indianapolis, Ind. Filed Oct. 13, 1965.

API

For Vitamin C Tablets.
First use Sept. 24, 1965.

SN 230,032. Colgate-Palmolive Company, New York, N.Y. Filed Oct. 13, 1965.

GERILID

For Geriatric Medication for Improving Peripheral Circulation.
First use on or about Aug. 24, 1965.

SN 231,387. Chesebrough-Pond's Inc., New York, N.Y. Filed Oct. 23, 1965.

STIMULIN

For Antidepressant.
First use Oct. 5, 1965.

SN 232,570. Eli Lilly and Company, Indianapolis, Ind. Filed Nov. 12, 1965.

ACTIMETS

For Medicinal Tablet Specially Prepared To Provide Sustained Action of the Drugs Contained Therein.
First use Nov. 1, 1965.

SN 234,526. Anasco GmbH, Wiesbaden, Germany. Filed Dec. 14, 1965.

INTENSOL

Owner of German Reg. No. 222,734, dated Sept. 21, 1917.
For Mouth and Throat Disinfectant.

SN 234,558. Geigy Chemical Corporation, Ardsley, N.Y. Filed Dec. 14, 1965.

ROCAS

For Anorexigenic Agents.
First use Nov. 30, 1965.

SN 235,592. Societe des Usines Chimiques Rhone-Poulenc, Paris, France. Filed Dec. 30, 1965.

RECTOPLEXIL

Priority claimed under Sec. 44(d) on French Reg. No. 538,227, dated July 29, 1965 (Paris); Natl. Inst. No. 265,398.
For Pharmaceutical Preparations for the Treatment of Bronchial Disorders and Other Respiratory Diseases.

SN 235,608. Chas. Pfizer & Co., Inc., New York, N.Y. Filed Dec. 20, 1965.

VIT-A TERRAMYCIN

Owner of Reg. Nos. 577,504 and 798,482.
For Antibiotic-Vitamin Preparation for Animal Use.
First use on or before May 19, 1965.

SN 236,790. Vitamix Pharmaceuticals Incorporated, Philadelphia, Pa. Filed Jan. 18, 1966.

FERROSEL "B"

The letter "B" is disclaimed apart from the mark as shown.
Owner of Reg. No. 421,681.
For Pharmaceutical Preparation for Use in the Treatment of Iron Deficiencies and Anemia.
First use 1941.

SN 237,150. Chas. Pfizer & Co., Inc., New York, N.Y. Filed Jan. 24, 1966.

CALMOL 4

Owner of Reg. No. 640,258.
For Rectal Suppositories.
First use Jan. 19, 1966.

SN 238,053. Cole Pharmacal Company, Inc., d.b.a. Cole Chemical Co. and/or Cole Chemical Company, St. Louis, Mo. Filed Feb. 4, 1966.

PHETOBESE

For Appetite Depressant Tablets for Weight Reduction.
First use Oct. 16, 1952.

SN 238,639. Huntington Laboratories, Inc., Huntington, Ind. Filed Feb. 11, 1966.

SANA-RINSE

For Antiseptic Hexachlorophene Wash and Rinse Preparation for Presurgical Degerming of the Skin.
First use Nov. 5, 1965.

SN 238,863. Geigy Chemical Corporation, Ardsley, N.Y. Filed Feb. 15, 1966.

SETIMAL

For Sedative Preparations.
First use Jan. 28, 1966.

SN 239,108. Atlas Chemical Industries, Inc., Wilmington, Del. Filed Feb. 18, 1966.

KINESED

For Pharmaceutical Preparation for the Treatment of Gastrointestinal Disorders.
First use Jan. 11, 1966.

SN 239,427. Merck & Co., Inc., Rahway, N.J. Filed Feb. 23, 1966.

HydroDIURIL-KALETS

Owner of Reg. Nos. 687,813 and 711,450.
For Medicinal Preparation for Use as a Diuretic and as an Agent in the Treatment of Hypertension.
First use Dec. 23, 1965.

SN 239,538. Chas. Pfizer & Co., Inc., New York, N.Y. Filed Feb. 24, 1966.

NAVARON

For Psychotherapeutic Agent.
First use Feb. 1, 1966.

SN 239,884. The Denver Chemical Manufacturing Company, d.b.a. Wampole Laboratories, Stamford, Conn. Filed Mar. 1, 1966.

SLIDEX

For Diagnostic Reagent.
First use Feb. 16, 1966.

SN 241,256. Kirkman Laboratories, Inc., d.b.a. Cabnet Pharmacal Co., Portland, Oreg. Filed Mar. 17, 1966.

cabnet

For Pharmaceutical Preparations.
First use Sept. 28, 1964.

SN 246,865. Betan Company, Inc., Knoxville, Tenn. Filed May 31, 1966.

SIGNEF

For Suppositories.
First use at least as early as December 1963.

SN 246,866. Betan Company, Inc., Knoxville, Tenn. Filed May 31, 1966.

DERMASOL

For Counter Irritant Soothing Lotions.
First use at least as early as April 1961.

SN 246,867. Betan Company, Inc., Knoxville, Tenn. Filed May 31, 1966.

SANI-VESS

For Vaginal Cleansers.
First use December 1948.

Class 19—Vehicles

SN 202,124. Moto Gilera S.p.A., Arcore, Milan, Italy. Filed Sept. 16, 1964.

GILERA

Owner of Italian Reg. No. 126,648, dated Dec. 1, 1955.
For Motor Cycles and Parts Therefor.

SN 224,243. Rolite, Inc., Grantsburg, Wis. Filed July 26, 1965.

Rolite

For Folding Travel Trailers.
First use Jan. 2, 1959.

SN 228,982. Bearfoot Airway Corporation, Wadsworth, Ohio. Filed Sept. 30, 1965.

SLIM-JIM

For Ornamental Side Wall for Automobile Wheels.
First use September 1965.

SN 231,721. Bel-Craft, Inc., Linkwood, Md. Filed Oct. 28, 1965.

Tangier

For Power Driven Boats.
First use July 26, 1965.

SN 232,048. The Hustler Co., Bossier City, La. Filed Nov. 3, 1965.

HUSTLER

For Boats.
First use June 15, 1964.

SN 232,162. Star Tank and Boat Company Inc., d.b.a. Starcraft Boat Company, Goshen, Ind. Filed Nov. 4, 1965.

SKYLARK

For Sail Boats.
First use Jan. 2, 1964.

SN 232,698. Joines Body Company, Galax, Va. Filed Nov. 15, 1965.

ALUMIVAN

For Bodies for Pick Up Trucks.
First use 1959.

SN 233,715. Kaiser Jeep Corporation, Toledo, Ohio. Filed Dec. 1, 1965.

JEEPSTER

Owner of Reg. Nos. 438,144, 689,918, and others.
For Automobiles and Structural Parts Thereof.
First use Feb. 11, 1943.

Class 21—Electrical Apparatus, Machines, and Supplies

SN 155,468. Major Equipment Company, Inc., Chicago, Ill. Filed Oct. 9, 1962.

PRESTO-PATCH

For Cross Connection Cabinet for Stage Lighting.
First use May 1962.

SN 219,311. Atlantic Research Corporation, Alexandria, Va. Filed May 20, 1965.

LD

For Transducers—Namely, Hydrophones, Microphones, Pressure Sensors, and Acoustic Projectors.
First use July 1957.

SN 223,780. Compagnie Francaise Thomson-Houston, Paris, France. Filed July 20, 1965.

POLYVISION

Owner of French Reg. No. 519,072, dated Jan. 29, 1964 (Seine); Natl. Inst. No. 218,999.
For Electrical Apparatus, Instruments, Components and Devices for Television Receiving Sets and Television Systems and Parts Thereof.

SN 224,105. Loewe Opta GmbH, Berlin, Germany. Filed July 23, 1965.

AVISO

Owner of German Reg. No. 734,745, dated Feb. 28, 1939.
For Radio and Television Receivers, Sound Amplifiers, and Television Recorders.

SN 230,653. Kabushiki Kaisha Yaskawa Denki Seisakushuo, d.b.a. Yaskawa Electric Mfg. Co., Ltd., Yahata-ku, Kitakyushu-shi, Japan. Filed Oct. 20, 1965.

YE

The mark consists of a design of the letters "YE."
For D.C. Electric Motor and Generator; A.C. Electric Motor and Generator (Induction and Synchronous Types); Eddy Current Type Coupler, Eddy Current Type Brake; Mercury Rectifier; Electric Switch, Electric Circuit Breaker, Electric Relay; Electric Switch (Distributing) Box, Electric Switch Board; Electric Apparatus for Automatic Self-Controlling, Magnetic Amplifier; Electromagnetic Braking Device, Electronic-Applied Industrial Instruments—Namely, Electronic Profiling Apparatus, Electronic Pipe Cutting Device, Electronic (Electrostriction Type) Balancer.
First use June 1953; in commerce December 1955.

SN 232,371. Vega Electronics Corporation, Santa Clara, Calif. Filed Nov. 8, 1965.

SOUNDSERVO

For Automatic Volume Control for Electronic Sound Systems.
First use Aug. 28, 1965.

SN 232,411. Merrell Electronics Corp., Brooklyn, N.Y. Filed Nov. 9, 1965.

HORNET

For Electrical Burglar Alarms.
First use Sept. 1, 1965.

SN 236,615. McCulloch Corporation, Los Angeles, Calif. Filed Jan. 17, 1966.

Golden-Touch

For Starters for Outboard Engines.
First use Nov. 3, 1965.

Class 22—Games, Toys, and Sporting Goods

SN 219,881. J & J Enterprises, Inc., Coral Gables, Fla. Filed May 27, 1965.

SPIRAFLEX BY GATORCLASS

For Fishing Rods and Component Parts Thereof.
First use on or about Mar. 9, 1965.

SN 219,882. J & J Enterprises, Inc., Coral Gables, Fla. Filed May 27, 1965.

SPIRALITE BY GATORCLASS

For Fishing Rods and Component Parts Thereof.
First use on or about Mar. 9, 1965.

SN 220,861. Jerry Lucas Pass-Time Games, Inc., Columbus, Ohio. Filed June 10, 1965.

Spin-Play BASKETBALL

No claim of exclusive right is made to "Basketball" for the goods recited.
For Equipment (or Apparatus) Sold as a Unit for Playing a Board-Type or Parlor Basketball Game.
First use Nov. 17, 1964.

SN 220,887. Varian Associates, Palo Alto, Calif. Filed June 10, 1965.

ULLR

The mark "ULLR" was the son of "Sif," the step-son of "Thor," known for beauty and for skill with the bow and on skis.
For Ski Magnets.
First use Nov. 20, 1964.

SN 221,915. Eberhard Faber Inc., Wilkes-Barre, Pa. Filed June 24, 1965.

EBERHARD FABER

Owner of Reg. Nos. 129,700, 699,426, and others.
For Toys and Games—Namely, Coloring Sets With Pencils, Crayons, Paints and/or Liquid Markers, Balancing Games, Mechanical Games, and Target Games With Pistol and/or Darts.
First use Aug. 2, 1955.

SN 223,000. Gabriel Industries, Inc., New York, N.Y. Filed July 8, 1965.

GABRIEL CHANNEL-SLIDE

The term "Channel-Slide" is claimed only in connection with the mark as used.
For Toy Kitchen Appliances and Furniture—Namely, Ranges, Refrigerators, Washing Machines, Sinks, Ovens, and Cabinets.
First use Sept. 1, 1964.

SN 224,370. Goodwin Alarik, La Canada, Calif. Filed July 28, 1965.

SURFERS' WORLD

For Skateboard Poles.
First use July 23, 1965.

SN 224,371. Goodwin Alarik, La Canada, Calif. Filed July 28, 1965.

SURF STICK

For Skateboard Poles.
First use July 23, 1965.

SN 224,912. Bancroft Racket Company, Pawtucket, R.I. Filed Aug. 4, 1965.

WILLIAM Bancroft

"William Bancroft" is the name of a deceased individual.
For Tennis and Badminton Rackets.
First use December 1938.

SN 227,043. Lazy Ike Corporation, Fort Dodge, Iowa. Filed Sept. 2, 1965.

MUSKY IKE

Applicant disclaims the word "Musky" apart from the mark as shown. Owner of Reg. Nos. 431,240, 781,707, and others.
For Fishing Lure.
First use Dec. 31, 1952.

SN 227,044. Lazy Ike Corporation, Fort Dodge, Iowa. Filed Sept. 2, 1965.

HUSKY IKE

Owner of Reg. Nos. 431,240, 781,707, and others.
For Fishing Lure.
First use Dec. 31, 1950.

SN 227,352. King-Seeley Thermos Co., d.b.a. Structo Division, Freeport, Ill. Filed Sept. 7, 1965.

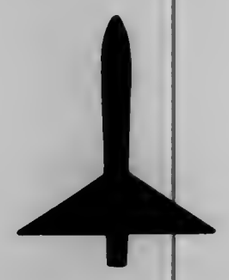
STRUCTO

Owner of Reg. No. 91,394.

For Toys—Namely, Road Graders, Cement Mixers, Pick-Up Trucks, Dump Trucks, Stake Trucks, Wrecker Trucks, Mail Trucks, Fire Trucks, Fire Rescue Trucks, Garbage Trucks, Crane Trucks, Moving Van Trucks, Horse Vans With Trailers, Riding Academy Trucks With Trailers, Kennel Trucks, Livestock Trucks, Troop Carrier Trucks, Car Carrier Trucks, Missile Launcher Trucks, Timber Hauling Trucks, Camper Trucks, Fishermen's Trucks With Boat Trailers, Week-Ender Cars, Ride-On Type Wheeled Toys, Molded Soldiers and Animals, Power Shovels, Bull-Dozers, Mobile Cranes, Cars and Trucks With Simulated Motor Sound Devices; Packaged Sets of Truck Toys—Namely, Farm Sets, Highway Builder Sets, and Army Combat Sets.

First use 1957; 1912 as to the word "Structo."

SN 227,354. King-Seeley Thermos Co., d.b.a. Structo Division, Freeport, Ill. Filed Sept. 7, 1965.



STRUCTO

Owner of Reg. No. 91,394.

For Toys—Namely, Road Graders, Cement Mixers, Pick-Up Trucks, Dump Trucks, Stake Trucks, Wrecker Trucks, Mail Trucks, Fire Trucks, Fire Rescue Trucks, Garbage Trucks, Crane Trucks, Moving Van Trucks, Horse Vans With Trailers, Riding Academy Trucks With Trailers, Kennel Trucks, Livestock Trucks, Troop Carrier Trucks, Car Carrier Trucks, Missile Launcher Trucks, Timber Hauling Trucks, Camper Trucks, Fishermen's Trucks With Boat Trailers, Week-Ender Cars, Ride-On Type Wheeled Toys, Molded Soldiers and Animals, Power Shovels, Bull-Dozers, Mobile Cranes, Cars and Trucks With Simulated Motor Sound Devices; Packaged Sets of Truck Toys—Namely, Farm Sets, Highway Builder Sets, and Army Combat Sets.

First use May 1965; 1912 as to the word "Structo."

SN 228,750. Karl Riha, Steyr, Austria. Filed Sept. 27, 1965.

Priority claimed under Sec. 44(d) on Austrian application filed Mar. 25, 1965; Reg. No. 55,330, dated Aug. 5, 1965.

For Metal Snow Skis.

SN 229,804. Hassenfeld Bros., Inc., Pawtucket, R.I. Filed Oct. 11, 1965.

Little miss no-name

For Doll.

First use on or about Sept. 29, 1965.

SN 229,807. Hassenfeld Bros., Inc., Pawtucket, R.I. Filed Oct. 11, 1965.

Stardust

For Toy Art Kits Containing Flocking Material, Pictures, and Other Accessories.

First use on or about Sept. 11, 1965.

SN 229,929. AJ Industries Corporation, Delavan, Wis. Filed Oct. 12, 1965.

Caddy Cruiser

For Golf Carts.

First use on or before Oct. 1, 1964.

SN 230,183. Old Pal Inc., Lititz, Pa. Filed Oct. 14, 1965.

Trappe

"Trappe" is the French equivalent of the English word "trap."

For Ski Boot Cases.

First use July 28, 1965.

SN 230,484. Anderson & Thompson Ski Co., Inc., Seattle, Wash. Filed Oct. 19, 1965.

PENGUIN

For Snow Skis.

First use July 13, 1962.

SN 230,489. Anderson & Thompson Ski Co., Inc., Seattle, Wash. Filed Oct. 19, 1965.

MARK II

For Snow Skis.

First use Aug. 19, 1965.

SN 231,440. Mattel, Inc., Hawthorne, Calif. Filed Oct. 23, 1965.

MATTEL-O-PHONE

Owner of Reg. Nos. 635,129 and 753,681.

For Toy Telephone.

First use Oct. 12, 1965.

SN 231,443. Mattel, Inc., Hawthorne, Calif. Filed Oct. 23, 1965.

BUNSON BURNIE

Owner of Reg. No. 811,319.

For Doll, Doll Clothes, and Doll Accessories.

First use Oct. 12, 1965.

SN 231,645. Lisbeth Whiting Company, Inc., Brooklyn, N.Y. Filed Oct. 26, 1965.

OOGLE BEADS

No claim of exclusive right is made to "Beads" for the goods recited.

For Toy Beads.

First use Mar. 29, 1965.

SN 231,803. Sara Y. Belknap, Gainesville, Fla. Filed Oct. 29, 1965.

THE GREAT SOCIETY

For Game Apparatus Sold as a Unit for Playing a Game of the Type in Which Playing Pieces Are Moved Over a Game Board.

First use at least as early as Aug. 14, 1965.

SN 232,341. Parris Mfg. Co., Savannah, Tenn. Filed Nov. 8, 1965.

STRAITSHOOTER

For Toy Rifles and Toy Pistols.

First use Sept. 30, 1965.

SN 232,592. The Program Aids Company, Inc., Mount Vernon, N.Y. Filed Nov. 12, 1965.

HERCULON

For Gymnastic Apparatus—Namely, Parallel Bars, Horses, Balance Beams, Bucks, Take-Off Boards, Trampolines, Horizontal Bars, Vaulting Boxes, and Still Rings.

First use Nov. 5, 1965.

Class 23—Cutlery, Machinery, and Tools, and Parts Thereof

SN 210,042. The Pneumatic Applications Company, Simsbury, Conn. Filed Jan. 15, 1965.

VARATORQ

For Brake Control Apparatus and Parts Therefor for Regulating Applied Brake Pressure Upon the Core or Shaft of a Mill Roll.

First use in or about February 1964.

SN 215,212. The Haigh Engineering Co. Limited, Ross-on-Wye, England. Filed Mar. 29, 1965.

SANIMATIC

Owner of British Reg. No. 844,182, dated Jan. 22, 1963.

For Machines for Disposing of Fibrous Articles by Pulverizing, Comminuting, and Grinding, and Parts of All the Aforesaid Goods.

SN 216,540. Stone Conveyor Co., Inc., Honeoye, N.Y. Filed Apr. 14, 1965.

THRIFTY-LIFTY

For Belt Conveyors and Parts Thereof.

First use Sept. 28, 1964.

SN 217,435. Escher Wyss, G.m.b.H., Ravensburg, Wurttemberg, Germany. Filed Feb. 18, 1965.

HICOFINER

Priority claimed under Sec. 44(d) on German application filed Aug. 27, 1964; Reg. No. 798,812, dated Dec. 28, 1964.

For Machinery for Handling and Preparing Raw Materials and Half Stuffs for Paper, Board and Cardboard Production—Namely, Refiners, Deflakers, Presses, Mixers, and Pumps.

SN 220,888. Weben Industries, Inc., Dallas, Tex. Filed June 10, 1965.

VEND-A-WASH

For Coin-Operated, Self-Service Car Wash Installation.

First use May 19, 1965.

SN 222,248. Bath Iron Works Corporation, Bath, Maine. Filed June 29, 1965.

VIBE-O-DECK

For Vibratory Sizing and/or Classifying Conveyors and Screens.

First use Oct. 7, 1964.

SN 223,727. Rocket Research Corporation, Seattle, Wash. Filed July 19, 1965.

The drawing is lined for red but color is not claimed as a feature of the mark. The mark is a fanciful representation of the letters "RRC."

For Jet Reaction Motors, Also Known as Rocket Engines.

First use on or about Dec. 24, 1962.

SN 227,135. Federal-Mogul Corporation, Detroit, Mich. Filed Sept. 3, 1965.

TEFGARD

For Antifriction Bearing Materials—Namely, Sleeve Bearings, Bushings, and Thrust Washers.

First use Feb. 24, 1965.

SN 231,390. Conveyor Dynamics, Inc., Syracuse, N.Y. Filed Oct. 23, 1965.

ASTROVEYOR

For Overhead Conveyors and Overhead Conveyor Systems.
First use during first half of June 1965.

SN 231,391. Conveyor Dynamics, Inc., Syracuse, N.Y. Filed Oct. 23, 1965.

For Overhead Conveyors and Overhead Conveyor Systems.
First use during first half of June 1965.

SN 232,527. Cincinnati Screen Process Supplies, Inc., Cincinnati, Ohio. Filed Nov. 12, 1965.

AEROKNIVES

For Silk Screening Dryer Apparatus.
First use on or about Oct. 14, 1965.

SN 232,615. The Torrington Company, Torrington, Conn. Filed Nov. 12, 1965.

T TORRINGTON

Owner of Reg. Nos. 202,735, 793,288, and others.
For Anti-Friction Bearings Including Straight Roller, Tapered Roller, Spherical Roller, Needle and Ball Bearings; Ball Slide Bearings; Ball, Roller and Needle Thrust Bearings; Needle and Bearing Races; Also Self-Aligning Ball Bushings; Cage and Roller Assemblies; and Small Machine Parts Made to Customers' Specifications.
First use Mar. 1, 1965.

SN 232,737. Tateisi Electronics Co., Ukyo-ku, Kyoto, Japan. Filed Nov. 15, 1965.

VENDGISTOR

Owner of Japanese Reg. No. 639,322, dated Mar. 24, 1964.
For Vending Machines.

SN 232,835. Hollymatic Corporation, Park Forest, Ill. Filed Nov. 17, 1965.

Hollymatic

The drawing is lined for the color red. Owner of Reg. No. 515,256.
For Machines for Molding Meat Patties, Machines for Conveying Meat Patties, Machines for Stacking Meat Patties and Machines for Scoring Meat Patties.
First use Oct. 1, 1964.

SN 233,137. The Smith and Winchester Manufacturing Company, South Windham, Conn. Filed Nov. 22, 1965.

PREHI

For Sheeters in the Nature of Heavy Duty Paper Cutters.
First use in or about October 1961.

SN 233,332. Erman-Bach, Ltd., New York, N.Y. Filed Nov. 26, 1965.

The portrait shown is fanciful.
For Squeeze-Type Bags for Decorating Pastry and Parts Thereof, Cookie Cutters and Sets, and Pastry Writing Bags.
First use July 10, 1962.

SN 234,042. Lawn-A-Mat Chemical and Equipment Corp., Mineola, N.Y. Filed Dec. 6, 1965.

LAWN-A-MAT

For Combine Machine for the Weeding, Feeding, and Other Treatment of Soil To Enhance the Growth of Grass.
First use May 1961.

SN 238,349. The Gillette Company, Boston, Mass. Filed Feb. 8, 1966.

LADY GILLETTE

Owner of Reg. No. 767,865.
For Safety Razors.
First use May 1930.

SN 239,488. Bolton-Emerson, Inc., Lawrence, Mass. Filed Feb. 24, 1966.

For Pulp and Paper Machinery—Namely, Disc Refiners.
First use Dec. 8, 1965.

SN 239,489. Bolton-Emerson, Inc., Lawrence, Mass. Filed Feb. 24, 1966.

For Pulp and Paper Machinery—Namely, Refiners.
First use Dec. 8, 1965.

Class 26—Measuring and Scientific Appliances

SN 221,730. Firma Heilma GmbH., Glastechnische Werkstatten, Mullheim, Baden, Germany. Filed June 22, 1965.

OS

For Absorption Cells Made of Glass and Quartz Glass (Fused Silica).
First use Sept. 1, 1959; in commerce Sept. 1, 1959.

SN 221,731. Firma Heilma GmbH., Glastechnische Werkstatten, Mullheim, Baden, Germany. Filed June 22, 1965.

QI

For Absorption Cells Made of Glass and Quartz Glass (Fused Silica).
First use Sept. 1, 1959; in commerce Sept. 1, 1959.

SN 228,901. Freeland Gauge Company, Detroit, Mich. Filed Sept. 29, 1965.

UNIVERSALAIRE

For Pneumatic Operated Dimension-Gauging Apparatus for Machined Parts.
First use May 28, 1965.

SN 229,643. Dytronics Company, Inc., Columbus, Ohio. Filed Oct. 8, 1965.

For Spectrum Analyzers, Phase Sensitive Voltmeters, Telemetry Calibrators, Impedance Comparators, Electrolytic Capacitor Analyzers, Phase Angle Standards, Phase Angle Meters, and Underwater Sound Transducer Calibrators.
First use Mar. 15, 1965.

SN 230,539. Hoffman Camera Corporation, Farmingdale, N.Y. Filed Oct. 19, 1965.

VERTICAM

For Cameras, Camera Vacuum Backs and Precision Metal Film Holders.
First use July 2, 1965.

SN 230,823. Paul S. Heitman, d.b.a. Gem-Mounts and Gem-Masks Co., New York, N.Y. Filed Oct. 21, 1965.

TINTASLIDE

For Color Correction Filters.
First use Jan. 1, 1964.

SN 240,610. High Voltage Engineering Corporation, Burlington, Mass. Filed Mar. 10, 1966.

dependex

For Particle Accelerators of the Nuclear Radiation Source Type for Use in Scientific Research and Industry, and to Accessories and Auxiliary Equipment Therefor—Namely, Actuators, Beam Tube Supports, Bellows, Chambers, Focus Rings, Ionization Gauges, Adapters, Targets, Gate Valves, Viewers, and Unions Adapted for Use With Particle Accelerators.
First use Mar. 14, 1955.

SN 247,552. Wendell P. Dubbs, Palo Alto, Calif. Filed June 8, 1966.

TYPE-FLEX

For Photographic Distortion Equipment.
First use Feb. 20, 1966.

Class 27—Horological Instruments

SN 231,150. Odo, Mores, Jura, France. Filed Oct. 22, 1965.

Odo

Owner of French Reg. No. 2,963, dated Mar. 16, 1951 (Saint-Claude); Natl. Inst. No. 491,021.
